Maco Brute Seventy Five Amateur Bi-Linear Amplifier. The Maco Tube # 2057 is bad but other wise is usable. Blue face with chrome cabinet. Has a Long scratch on face. Use on 10 and 11 meter.

Best offer over $75.00 plus shipping.

3. Motorola HF and VHF F.S.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-01 00:00:00 UTC
From: Zachary Canright <zzacman@alaska.net>
Message-ID: <3521A7DA.3822@alaska.net>
Source record: 107505

The rig is a Motorola "Micom" HF USB. The radio is crystal controlled with a range of 2-9 MHz and it puts out 125 Watts. Motorola model L70SBG1180BM. The unit is in very good condition. It comes with a factory manual. $200.00 plus shipping. A very well built high quality boat anchor.

The second rig is a Motorola VHF rig. It has 4 channells that are set by Motorola "crystal packs" for lack of a better word. It is Motorola model # L43BBB-1190DM, serial # SA093A. Currently it is set up for 169.175 MHz and 169.875 MHz. A good platform for any type of VHF project. High quality tuneable cavities etc. Probably has the duty cycle of a Sherman Tank. $75.00 plus shipping.

Source record: 107510

Howdy Dale
I have an HW-8 which I built new and have the schematic in front of me here.....As built the HW8 DOESN'T USE the meter on receive as per your other reply. Now....NO SIDETONE and NO RECEIVE AUDIO OUTPUT eh.....IF BOTH ARE MISSING, then the only common link is at the headphone jack! Did you know that there was no speaker built into the set?? Check for audio output at the headphone jack either with a small 8 ohm (etc) speaker/headphones or a scope (should put a low resistor as a matter of good troubleshooting...10 ohm ok). If what you describe is accurate, troubleshoot this first as an audio problem.....IC2 pin 9 is receive audio preamp output...the wiper of the audio gain pot is actually the input to the audio final output stage so check there as well (inject here to check the final stage). IC2 pin 10 is the output of the SIDETONE oscillator and R77 is it's output adjust (between pin 10 and the headphone jack so troubleshoot by keying and looking for sidetone here).

Main thing I stress here is that there are TWO audio sources both of which terminate at the headphone jack.....no internal speaker.

Good luck

Gord

11. Atlas Receiver (??)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-01 00:00:00 UTC
From: walter delesandri <walt@jove.acs.unt.edu>
Message-ID: <3522614A.3CB053AC@jove.acs.unt.edu>
Source record: 107513
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have seen references over the years to an Atlas (makers of 210x,
350xl, etc)
RECEIVER only. Did in face Atlas ever make a separate receiver? Perhaps

a companion to the little tranceivers? Any information would be
appreciated. Have
had several Atlas pieces (inc. my 2-210s) and think they're
interesting. I'd love
any info about more obscure pieces, and if a separate receiver was made,
I'd
like to have one, if reasonable.
Thanks, Walt WB5LJW

12. FS-RME4350

Source record: 107514

I have for sale a nice RME4350 receiver, looks great, works good.
Original vernier tuning and knob has been replaced with a National
reduction tuning vernier, other than that I believe it is all original.
$150 delivered ConUs or possible trade for an older HF transceiver and
power supply in working condition or maybe a 2m mobile. Email direct if
you are interested, thanks. John N0EE

13. FS-RME69 Parts unit

16. FS-75S1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-01 00:00:00 UTC
From: John <jmul@iland.net>
Message-ID: <01bd5d8a$9a279fc0$92e7f2cd@default>
Source record: 107518

I have for sale a Collins 75S1 receiver. Has no cabinet or trim ring, a couple of the knobs are not original, a switch has been added to the front panel between the emission switch and phones jack for the Waters Rejection unit, a couple of other small holes to the left of the band switch, and a couple of RCA jacks added to the chassis for I believe IF connections. Main tuning knob is excellent as is the whiteface meter.
Purists/collectors would consider this a parts unit, I don't, it works very well. Front panel is in very good shape except for the added switch and holes. Personally I think the holes could be filled and painted without much effort, and the chassis is clean.
I am asking $160 for this unit as is, I probably could part it out for more but it works too well for that. If you want a 75S1 to use and not stare at, this WE unit is what you want. May consider an older HF transceiver in trade but cash is prefered so I can complete an amplifier project. Contact me by private email if interested, I am in Missouri.

>Thanks, Walt WB5LJW

Hey, you old curmudgeon,

You may be thinking about the RX-110, which was a small, simple receiver
that Atlas sold back in the 1970s. They also made a companion transmitter
module which used the receiver VFO and formed a transceiver. It mounted
in a sort of docking arrangement, similar to the 210X base station docking
unit. I recall seeing the RX-110 and TX-110 (what they called it if you
bought the transmitter module too) in the magazine ads in the 1970s. The
transmitter was available in 10 Watt and 100 Watt models, by the way. I
have only ever seen one of these sets in person in my 21 years of hamming,
and that was about three years ago at the Weatherford hamfest. The set
was beat all to heck and I doubt it was working. No paperwork either.

73,
Dean, K5DH

21. Re: List of the rec.radio newsgroups (brief)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6fs9pj$76p@news.Hawaii.Edu>
Source record: 107523
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment

```
In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

I have(2) HW-7's. #1 is cosmetically an 8+, and appears to be working.
All bands rec, and TX out is abt 2-3 watts. $70 for this one.

#2 is cosmetically a 6-7 due to faded paint. 40M has low output tx and rx.
20 and 15 have abt 1.5 w out. Rec not as good as #1, but does rec. $50
for this one.
No manuals or power connectors for either unit.
73, Ed

From: Virgil Chambers <kf4lgz@mindspring.com>
Message-ID: <6funs5$ru5@camel21.mindspring.com>
Source record: 107538

Does anyone have a copy of a manual for a TS-530S they would be willing to part with or make me a copy of? I have access to one that recieves well, but I can't tune up for xmit - no Ip at all - HV is present, as is bias current - any help at all woul be great, and a manual or schematic would be a dream come true!

For Trade:

Collins 310 series exciter. Does not have the antenna coupler installed (has blank plate over the front panel where those controls exit--factory option I guess). Unit is complete otherwise with a nice front panel, original knobs. All tubes are there. Chassis is dirty but not corroded. There is one plug in coil in the unit (40 meters if memory serves me). It is a rack mount unit with no cabinet. Too many projects and I'll never have time to collect up the rest of the parts to build a pseudo KW1, hi.

Tnx for the read.

Bob, KE6F

Hi Mate,
You are the proud owner of a Tungar Bulb Rectifier unit. These were a hefty half wave rectifier unit that could deal with a few amps or so depending on size of bulb (a tungsten fil mercury vapor rectifier). Great hash maker. Used them many years ago in an old Western Union Plan 54 tty switching center for TTY loop battery supply. Just let 'em warm up a few minutes before you apply plate voltage to the bulb or it will be spark city.

Hope this helps.

Seems as I look at my blue racer that if I took all the parts off the
base and turned the base upside down, all I would need to do to make
it a lefty would be to drill and tap a new hole for the adjustable
spring on the dot side. The armature would need to be turned upside
down, too, and possibly moved up or down on its pivot pin.

Or you could stand on your head? 73, Mike -N4NT-

> San Francisco, Calif.

Not weird at all. Electro Mfg made many of these bugs from the mid
20s to the early 30s. The Electro Bugs were made in Fresno California
and later in San Francisco. Rob's model is likely a Junior or #11.
The design includes the "T" bar handle. On the professional models
there is an electromagnet that pulls on the pendulum. This was in series
with the telegraph line and was supposed to make heavier weighted dots.
There is a reostat in series with the electromagnet. These bugs were
made with a nickle plated base and a black enamel base. The serial
numbers for this bug seem to be in the 10,000 plus range.
There was also a model without an electromagnet call the Electro-Bug
Jr. It was also sold as the Model 11. The Juniors were made in black and
green bases. There was a wireless model available with 3/8" contacts.
The serial numbers for the Jr. and 11 seem to be less than 1,500. All
models had the serial number stamped on the bottom. Electro is believed
to be the father of the Les Logan line of keys as they had the "T" bar
handle also. These keys seem to be fairly common. You find an equal
number with and without the electro-magnet.
For more info on off-brand bugs, see my web page shown below.

Source record: 107599

>Subject: WHAT IS A NATIONAL HRO-50T??

Well, I have one of these and is a single conversion 455 khz superhet which change bands by plugging in the various coil sets. Some of the coils have a switch on them for bandspread on the ham bands. I think the unit shipped with A,B,C,D coils as standard and the others are quite rare esp E&F which cover the AM broadcast band. These rigs have superb audio due to the push-pull output circuit and decent selectivity (cascaded IF tuned circuits.) The HRO 50T1 had one more stage of tuned IF. They are pretty easy to work on and the only likely trouble spots are the electrolytics and the wax paper caps.

Hint: Always switch off the B+ when changing coil sets.

Factors in price - Apppearance/exterior finish, Ham mods, is the speaker the correct matching one? Some options are hard to find, esp the crystal calib which plugs into a socket inside. The NBFM option isn't too useful. There was some kind of Select-o-Ject audio Q multiplier which plugged into the back.

I'm no expert on price, but I would think a nice one would fetch about $200 to $400.

50. REQ:Tube layout on Canadian Marconi MSL5E Radio Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-01 00:00:00 UTC
From: ifr@dlcwest.com
Message-ID: <35239740.196189608@news.dlcwest.com>
Source record: 107602
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.antiques.radio+phono,rec.radio.amateur.misc

Picked up this beaut-anchor recently. All four tubes are in place and the set is operational, but the volume is extremely faint. Tubes check good, but someone's rubbed away the tube designator near one of the tubes and I'm not sure as to what it is supposed to be. Looking from the from of the set, left to right are 6J7, 6K7, 38 & 6F7. The 6J7 is the one in question.

The crystal detector isn't opertional when switched in either and it appears that someone has modified the Crystal Phones jack.

I am looking to buy an original manual and schematic, or atleast a photocopy for the set as well as the two small tuning knobs, one for the Aerial Tuning and another one for Detector Tuning. The larger calibrated dials are intact. The following is from the name plate:

Canadian MARCONI Company
Radio Receiver
Rating: 15 Kc to 1500 Kc
Type: MSL-5E/43370-E Serial: 1400
Pat'd: 1927-44 Spec: 43365-E

Thanks for your time and efforts,

Source record: 107406

Hello Folks:

I have a line on a Marconi Boatanchor Receiver. I will be picking it up tomorrow night....but I don't know much about it. I know Marconi made some nice Commercial type Receivers....and this is one of them...but I've never seen one before. I believe from what the owner said...this is a CR150 Model....or something very similar??

Anyone have one of these guys???...or know anything about it?? If so...any comments you may have would be greatly appreciated. This receiver is supposed to be in Mint Shape with Original Manual...and in Excellent working condition!! We'll see......

If anyone knows what a fair price is for this receiver...that would be helpful also.

I will also be picking up a Racal RA-17 with the Low frequency Converter...and Original Manuals...also supposed to be in Mint Shape. I am well aware of what this receiver is...and it's reputation......but I need to know what the going price is on this one...with the Low Freq Converter. These 2 Receivers will be following me home tomorrow night...either way!! I just happen to have a couple of Rack spaces just waiting to be filled!!

Thanks for any comments you may have on these 2 Classics!!

Regards...ROB.

Lynn,

My recollection is that the CW position provides SSB reception (but
I'll bet that you know this already) without the SSB adapter. The receiver
itself is quite stable. IMHO, the one weak point of this
receiver is the main tuning dial. It can be difficult
to re-set the drag properly. The bandspread range of the dial is
excellent.

I wonder how long ago this was. I've not seen one for under $100.
If I had seen one for $50, I'd own it. Lordy, I just realized
you are in Canada. $50 Canadian? That's more like $30 US. A
stunning bit of negotiation on your part, I'd say!

I have a Hammarlund HQ-170A ham band receiver for sale. Unit is in very nice physical condition (a 9 out of 10). Does not have a clock. The main tuning knob and 2 small selector knobs are not original but they do not look too bad as far as matching the rest of the knobs. Unit works well and has a manual. Cabinet is in very nice shape. Same goes for the front panel. Chassis is clean. Asking $165.00 pick up only or can deliver or meet within 100 miles of me (near Allentown, PA). Please e-mail if interested. Thanks.

I have an RME 4300 ham band receiver for sale. Cosmetics are good. I'd rate it a 7.5 out of 10 and it should clean up to be even nicer. The main tuning knob does not look original, but the knob used looks reasonably close. Manual included. Asking $110.00, shipped to lower 48. Please e-mail if interested. Thanks.

Not sure if I posted this already, but... I have 2 MC-50 desk mics for sale at $50/both. One mic is in great condition, works great, other mic looks rough, base is great, works ok but has hum... inside base is evidence of many rewirings, and I believe the audio leads being reversed is the only problem. Please email if interested! Buyer ships COD/CONUS or prepay.
thanks,
Randy

Posted this in a prev. msg... but it was kinda lost in the questions..
Have Motorola headset/mic, behind the head for use with cap, etc, like the 'Nascar' guys use except black. Dynamic mic element. Could use earpads, these are a bit too mushy.. has top velcro adj. strap and coiled cord. Boom adjusts in/out, hinged halfway and mic pivots. works great! it's a 4pin plug now, but have the factory barrel plug (4contact) desoldered, not cut. It's model NMN6064A SP04 if u wud like to look it up at Motorola's website or elsewhere. List new: $500 Priced at $90/firm/uship Please email if interested!
thanks!
Randy

73. Drake MN75 Antenna Tuner plus other goodies

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-02 00:00:00 UTC
From: Dave Sjolin <sjolin@swbell.net>
Message-ID: <35240106.CA21AA33@swbell.net>
Source record: 107428

For sale:

1. MFJ Artificial Ground (model MFJ-931).

Eliminate RF problems and hot rig. Create an artificial ground with a random length of wire thrown on the floor. Produces tuned counterpoise and electrically places far away RF ground directly at your rig. $30

2. Drake MN75 Antenna Tuner

Drake antenna tuner with built in watt meter and swr bridge. Tunes coax, twinlead and single wires. Includes 4:1 balun. Power handling capability is 300 watts. Designed to compliment the Drake TR7 and TR5 radios. Solidly built. Looks good. $65

3. W2DU type Current Balun (by the Wireman).

Good for 1-30 mhz operation. Accepts PL-259 at one end. Other end connects to each leg of your dipole. New in unopened container. Originally, $26.95. Got by acceident. Had ordered current balun for vertical accepting pl-259 at each end but never got around to returning. $20

4. "Reflections, Transmission Line and Antennas"

Classic book on antennas, feedlines, and swer by M. Walter Maxwell, W2DU. Dispels the half truths and outright myths that many believe about SWR and transmission lines. Hard cover. Last published by ARRL in 1990. $20

5. EB 432 "Eggbeater" Antenna

Eggbeater antenna for 432 mhz from M2. Antenna is horizontally polarized for weak signal work on 432 or for satellite operation. I have similar antenna for two meters and I consistenly work 200 miles with antenna up only 20 feet. Have several contacts in excess of 900 miles using Eggbeater for meteor scatter. Nice thing about it, you dont need to aim it. Catch all the openings. New in box. $80

6. Microphones
Shure 444D - $50
Heil HM-5 - 25

All items plus shipping.

You don't need no steenkin' papers. As a settler you are allowed to bring all your possessions. If you ever move back to the USA you won't have any problems either. Hopefully the tag is still on your radio showing that it was made in the USA. You can always register your foreign-made goods with US Customs on the way out.

Good Luck!

From: D Ostroy <anti-spam@worldnet.att.net>
Message-ID: <6g1c1v$aio@bgtnsc03.worldnet.att.net>
Source record: 107440

For Sale: Complete Drake B-Line

T-4XB, R-4B, AC-4 Power Supply, and MS-4 speaker.

In excellent condition. Both rx and tx cover 80/40/20/15/10 meters.
RX also has crystals for 160, 30, 18, 12, and 10CW, for transceive operation.

Tubes are not new but tx puts out full power on 80 to 15,
slightly less on 10. Will throw in a spare set of finals.
Recently (1996) replaced the high voltage capacitors in the AC-4 supply.

I am the second owner (since 1978) and the rig has only been lightly used.
No contesting. Cosmetically it is very clean (non-smoker) and includes
original manuals.

Best offer over $395.

Source record: 107551

Hello Dave,

Now I'm REALLY ticked at missing Timonium this year! Would have seen the Unitrode and probably had an eyeball QSO to boot!

Anyway, as Craig Smith says, it sounds like a '20s era battery charger/eliminator. Does the tube screw in like a lightbulb, rather than plug in like a tube? If so, it's almost certainly a form of Tungar bulb.

Tungars are (were) a form of rectifier that used a tungsten filament/cathode and a graphite anode, in a bulb filled with argon gas. They were meant for low voltage, high current applications (like battery chargers). In ham applications they had relatively little use, compared to kenotrons, electrolytic rectifiers, MG sets, and mercury arcs. Some folks did use them for bias rectifiers and to power the tipping solenoid in a mercury arc rectifier setup.

Whatever it is, it's at least 65-70 years old, and maybe even 75. The invention of practical AC tubes in the late '20s eliminated the need for eliminators (sorry!)

Anthony's Radio and TV Repair, located in Augusta, GA since 1951, is closing due to the owner's retirement. The modern equipment and parts have been sold; however, there are approximately 120 lineal feet of 6 foot high shelves loaded with new and used old stock parts that are still available. There are in excess of 5000 tubes of which about 75 percent are new old stock in boxes. The rest are used tubes in marked boxes. Based on one quick look, I would estimate that about 85-90 percent are TV oriented tubes. The rest are 6 and 12 volt radio types, etc. There are probably 40 or more lineal feet of shelves with new old stock TV parts and assemblies. There are more than 20 lineal feet of components such as resistors, capacitors, etc. There are over 100 power transformers (used) that are pulls from old radios and TVs. The rafters are covered with small transformers and filters of all types. There are no old radios or TVs left. There are a few pieces of old test equipment left. I saw two old B&K Analysts and an old signal generator.
The owner, Ed Anthony, is interested in selling all or part of it. He will take telephone calls between the hours of 12 noon until 9 PM Eastern Time until the stuff is sold. His telephone number is 706-863-4269. He has a detailed inventory but it is on "many" pages of paper so it is not available over the net. He does not have email access.
Should anyone have an interest in this rather large truck load of parts, please give him a call. I do not know what he wants($) for it. I will answer email questions for him - but only to the extent that I have the information. I have had only one quick look and I have repeated about all I know about it here.
Thanks for reading!

Howard Weeks, Augusta, GA

I am looking for the matching Speaker/HF Adapter for the Clegg Interceptor.
It must be in nice shape, and unhacked.
Items I am willing to trade:
1. Hallicrafters S-40B. The S40B needs some cleanup, alignment and an
audio tweak, is complete, receives and is unhacked.
2. Large air variable, roller inductor, etc.
3. Motorola Micor t-83 drawer which contains a 2m PA board good to 110w
from 1/2 watt drive, lots of other receive and
transmit circuitry, or use it as part of a repeater as many are doing.
4. General Radio 1001-A 15kc/kHz - 50mc/mHz Signal Generator, decent
shape, needs a little tinkering.
5. Ask and perhaps I might part with something else! :-)
Can we talk? -- THANKS! & 73, DavidC AA1FA

107. Another Weird Bug!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-03 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <35244e4e.15274038@nntp2.uunet.ca>
Source record: 107457

Hello Guys:

Tonight I went to a friends place to pick up a couple of Receivers......a Marconi CR-150 and a RACAL RA17-C with Low Freq Converter. Very happy to pick up both of these Classic Receivers......but that's not all I came home with. As part of the package deal I obtained some Collins literature, some nice old books and another Bug that I am not familiar with!! Hopefully someone from the group can help me out with this...it is not in any of the books I have.

This bug has a Black Wrinkle Finish and the Base measures 6 1/2" x 3". The Bug has a Chrome T-Bar Handle similar to the Mac and Speedx Keys I have. The Black/Chrome Metal Nametag is mounted on the upper left top of the Base and says........

Patents Pending
Manufactured By
ELECTRO MFG. CO.
San Francisco, Calif.

This bug has a heavy "Lead" Sliding Weight and "Clear" Palstic Paddles....(One Round, One Oval). It appears to be complete except for one Rubber foot...which is missing. On the bottom of the bug is The following # stamped into the Base...(Serial #) ????.... 1187

I have personally never heard of this company....but being new to Bug collecting...that's not a surprise!! I know some of you Die Hards know what this is.....and some of the history behind it......if you do...Please help me to know a little more about my latest find. Rariety?? It also has a Nice Cloth covered Cable attached to it...with a real weird Banana Type plug on the end...the plug has an Flat Insulator in between to copper Spring type Connectors...real weird????

I am assuming this is a little Local Manufacturer that made very few Bugs.......

Anyone else have one of these guys......or know anything more than I ????

Thanks for the help!!

Regards.....ROB.

Source record: 107458

Well, I'm not a bug nut, but I can tell you about the plug: you slide it between the brass base and the (usually) chrome connecting strap on a straight key provided by the company, and probably scewed down to the bench. So you didn't have to disconnect any company wiring to be ready to go to work.

Think of it like arriving at the pool hall with you own custom, 2-piece pool cue.....

I have a case for a Vibroplex bug. It's the old style; wood covered with some leatherette stuff. Trouble is, my bug won't fit in it. I have an Original Deluxe, and it's too long for the case. The case itself isn't too small, there's just a sort of felt-covered "bumper" on the door that's obviously meant to hold a shorter bug in place. What have I got here? Thanks.

> Someone... tossed it in the trash ... From what I was told about the rig on the BA e-list,
> that might have been the best place for it...

These much-maligned little radios are in fact dandy performers that have a few odd quirks that must be dealt with. Most notable, the combination tuning knob/band switch is a mechanical nightmare, and if it strips out, as it is wont to do, there's not a lot you can do about it. They are, of course, hybrid rigs; solid state receiver and exciter, vacuum tube driver and final. Also, they are SSB only; you need an adapter to work CW. On the plus side, they have internal power supplies for both 12vdc and 110vac; very versatile little rigs.

As practical "user" radios, these are nobody's first choice. As "classics" that are fun to restore and put on the air, they're great. I see them at hamfests now and then for well under $100. There is also a linear that matches the 34. It uses 6 (count 'em, 6!) TV sweep tubes. If you can find a 34 and the linear, and get them percolating again, you can have a nifty classic desktop kilowatt station for not much money.

Mike, N4PDY

119. "Museum" in San Luis Obispo, CA

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-03 00:00:00 UTC
From: Ian Webb <ian_webb@pacbell.net>
Message-ID: <352500FC.44C9D1BC@pacbell.net>
Source record: 107469

I visited Bob's Radio & TV in San Luis Obispo, CA recently. He has an extensive eclectic collection of early radios ranging from the very earliest with polished wooden cases to 1950s plastics and metals (some even have been chromed for who knows what reason). He also has a lot of miscellaneous radio related items and TV sets. Some restored and operating (he played a couple) and some not yet restored or in progress. He appears to **NOT** be interested in selling radios or parts but is happy to show you around.

He does repair in the back and seems to specialize in automobile radios, including converting to solid state guts or adding FM modules - all without changing the outward appearance. He's planning on moving to an old super market in Pismo Beach in the next year so he has more space and can better display his "museum."

If you are traveling Hwy 101 between Los Angeles and San Francisco and have interest and some spare time, I'd suggest dropping by.

Bob's Radio & Tv, 2300 Broad St., San Luis Obispo, CA 93401
1-805-543-2946
It's on the right hand side of the street heading north and is on a corner as you go towards the downtown from the south.

Broad is one of the old highways through town and from the south traveling north on Hwy 101 you can get off at Price Canyon just before Pismo Beach, go to the end of the road and turn left onto Broad heading north. Continuing north you can continue on Broad, through downtown San Luis Obispo and rejoin Highway 101.

From the north traveling south on Hwy 101 as you get into the San Luis Obispo exits take the Broad Street exit, wander around the Mission area and through the "downtown" and on down Broad St.. It's on the left perhaps half a mile as you leave the older downtown area. When you leave continue on down Broad past the airport and turn right onto Price Canyon and back to Hwy 101 in the Pismo Beach area.

Ian, K6SDE

120. MILLEN VIBROPLEX MILLEN HEATH ASTATIC etc on E-BAY

Oh Folks, why so negative on a radio that dared to at least make the leap into solid state technology--a much braver move than Collins or the rest of the folks given that many of the other folks had employed transistor technology in the lucrative military product mix. Hmmmm. But I too own a couple of the SB34s and dispite the hour warm up required to stabalize, they are potent little packages when teamed up with my SSB 2LA final amp. Even at 100-200 dollars these little rascals are a usable radio and in time will appreciate in value as dim folks toss their into the trash bins. heh!

130. IF Bandwith on the 75A3 too sharp!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-03 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <35254608.FF7D09BB@pacbell.net>
Source record: 107480

I'm in the process of restoring a rather nice Collins 75A3 receiver back to stock. I removed several modifications (product detector - home-brew plug-in - in the NBFM option socket and a 800 hz Collins non-75A3 CW filter).

So far, the receiver performs as specified...(?). Tuning in 'exalted-carrier' AM is excellent. CW is fine also.

The "problem" is that the 3.1 KHz mechanical IF filter is inline at all times, with the exception when the "A" mechanical filter is selected (no filter present). No signals are received.

The results are a "tight" 3.1 kHz pass band.... Too narrow for comfortable AM DSB reception as experienced with the 75A2 and R-388 series.

Is there a 'jumper' to be re-inserted to bypass the 3.1 filter? I'm sure that I must be missing something obvious. I sure would like to broaden the IF for the nice Hi-Fi full DSB AM.

Any help?

Thanks,
Scott KD6CQ

131. FS: 50 amp 28VDC p/s

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-03 00:00:00 UTC

For Sale:

Power Supply, 115/220 AC input, 28VDC out at 50 Amps continuous.
Removed from GRC-122/142 Ratt Vans. Metered for DC volts and DC amps.
Very tightly regulated and will deal with transient start up loads like
dynamoters etc. In excellent condition and I will pay the versapack fee
on UPS. Was in Fair Radio 1997 catalog. Unit weighs about 130 lbs and
will ship at around 145 lbs. $150 plus UPS ground from zip 95827

Tnx for the read

For Sale: I still have a couple of Collins TSC60V1 air cooled HF
dummy loads. 50 Ohm, in wall mounted cabinet with convection air vents
bottom and top. HN
connector which can be replaced with connector of choice. Unit consists

of three (3) huge non-inductive carborundum (sp) resistors and
associated mounting and shielding hardware in a rectangular case with
wall mounting tabs. Approximately 8 inches square by about 30 inches
long. Shipping weight about 18 lbs with original military packing.
Estimate power handling capacity at 1500 watts plus with convection
cooling, more if you want to blow it. Duty cycle unknown, but should
handle most legal ham amplifiers with ease. This is not a VHF load!
BTW I will convert the unit to SO-239 or N type if desired.

$125 plus UPS on 18 lbs from zip 95827

Tnx for the read es 73

The person who tossed it in the trash later said that she didn't think
anyone would want it - apparently it had been sitting outside in the
rain for quite a long time.

Wonder why owners treat their unwanted radios so badly? I was given a
Galaxy GT-550 that had been left out in the snow. Poor thing now has
a nice warm home to live in, and has been adopted by the cat.

I have acquired (got screwed!) a Valiant I and I need the specs on the T/R relay. It's voltage is derived from a divider off the +300v supply and the book states that it should be in the order of 100v DC, so it's a "current" relay. Or......maybe someone has one or a lead on where to get one. Thanks Mucho!

I once owned an SB-34, selling it was a smart move! No, I DID know what I was doing. I replaced the burnt out meter with a LED bar display that I whipped up but decided the VFO drift was too much to deal with.

I, currently, own an SB1-LA amplifier. Taking it to the Spokane Hamfest in the morning to get rid of it, too. With 6JE6's (or something like that) running $40 apiece, HAH, it'll sit till hell freezes over, in my basement. I'll let some other mishappen soul worry 'bout it.

157. Gonset Communicator IV's 220MHz

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-04 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <352739ED.A5D04473@pacbell.net>
Source record: 107262

Gonset Communicator IV - 220 MHz version. Model 3351.
~New in the box~. Circa 1962. Mint - "10" find in
a nice atmosphere time capsule.

Includes factory transmit (and receive) Xtals for 222.500 MHz.
Gently removed, powered up slow (variac). Meets and exceeds Factory
specifications. Plastic packing cover, manual and warranty card
included. Also
in the accessory bag is the AC and DC power cords and a extra mic plug
(pl-068).

The Gonset Comm IV's were quite a nice VHF rig. Unlike the earlier
Communicator
models which were tall and difficult to run mobile, the IV was a much
lower profile
set suitable for mobile work. The IV model also had a completely
different
"TVI proof" transmitter design - using link coupled multiplier stages to
the final
6360 output tube. RF power output is 10 watts typical.

The 220 MHz model is the rarest. The 6 and 2 meter models were more
common,
but still a tougher "catch" than the one eyed "gooney bird". The 220 MHz
model
has a crystal control receive (on the rear - socketed) as well as
tunable receive.
Tunes 219 to 225 MHz. 20 watts input power, AM plate modulated by a pair
of
6BQ5's. Six panel selected transmit crystal positions (8 or 24 MHz
range).

These were the only mass manufactured amateur 220 MHz transceivers in
the
world..... Until about 1976 - when the Midland (OEM), Cobra and Clegg 12
channel FM
rigs appeared out of the Far East - in anticipation of the "CB
takeover" of the 220 band.

The most common Gonset Communicators were "civilianized" by swamping
the IF cans for a broader IF bandwith. These were customized for Civil
Defense
operation. I guess the CD spec required that a receiver should "hold-up"
for
trembling hands during and after the "big one" hit ground zero......

Comfort then was your own backyard bomb shelter, a large stash of canned goods,
and a Gonset Communicator.... "Duck 'n Cover"!

This unit is NOT the CD model, Many were painted a bright yellow along with
the large CD logo plastered on the sides. Scores did get past the dude with the
yellow paint and CD stickers - sold outright to hams - less the bright yellow
exterior. But the 'broad" IF got shipped.

The IF selectivity on this model is quite sharp. NBFM slope detection is excellent.
The matching VFO (common swap meet find) has audio input for NBFM. I do not have the matching VFO. NBFM transmit with Crystal control is a simple (and
reversable) modification.

Any interest?? I have ~TWO~.....!!! One has not yet been removed from its
original box, just opened to verify contents.

I'm Willing to swap one for a 6 meter Communicator IV but would be also interested in
other "high end" 6 meter AM gear by Clegg (66'er or Thor) or Gonset (G-50).
Will also consider a Gonset G-76 w/ AC P.S or a Gonset G-28 10 meter AM rig.

Will consider swapping BOTH for a Drake "B" or "C" line. Light duty HF linear amp
(4 -811's).

Assuming a cash value of approximately $400 US for the pair. Prefer trades.
Please no 2 meter FM stuff......

I did a post about these sometime back on rec.radio.amateur.boatanchors and got quite a response. Many goodies were offered up for a swap, I seem to
have quite a collection as things are. Nobody came forward with Gonsets or Cleggs.
Many thanks to those who did respond.

In Cameron Park, just east of Sacramento, Ca..
73

Hello Folks,

I have a Heathkit Ag-7 audio generator forsale. This is a vintage mid 1940's as I recall.

The unit is in nice shape cosmetically. It eorks on some bands and is intermittant on others.
I have no use for this as an audio generator is would be more useful to a collector,

$20.00 or best offer plus shipping

Thank You

For Sale: Vintage E.F. Johnson bug, AKA semi-automatic key; black heavy-wrinkle finish, silver, red & black Johnson key label, chrome hardware, near perfect condition. Unique twin heigth adjustable paddle. Rounded corners, cast base, 3" x 6"; about size of old Vibroplex Zephyr (smaller than Original, larger than Blue Racer). Has verticlesoldering iron blemish mark on right hand paddle about mid-center, not really noticeable from normal views. Otherwise, a beautiful key. Fairly old production as it still has the two telegrapher hold down holes used to secure the bug to the reporter's bench.

Best offer by 4-10-98 or will trade for other equally sound non-Vibroplex bug. Responsible email's answered.

They did make a small RX, think was a 110 maybe. Saw one at Associated
RAdio years ago. The proprietor of the store said it wasn't much count,
This was the same guy who would sing the praises of piece of junk he had.
Don't know anything more about it but resembled a small 210. Anybody
else know of one?

Ive seen some queries lately dealing with dial glass....and if someone has part=outs thats best...
You can always try going to the local glass shop and having one cut and then look for glass etching in the yellow pages. Have them put the marking on for you..This may be pricey but it will work....
You can also buy a cheap picture frame with the thin glass in it for a few dollars and cut it your self with a glass cutter. Then add the line using pinstripe tape purchased at the local auto parts store...
Just some thoughts:

Cleaned out an estate and the guy never threw anything away!
23 POUNDS of Heath Catalogs from 1970 up to 1990. Makes a 12" high stack
All in good condition. $50 + shipping for 25# from VA [24012]

Also have some earlier ones I'm sorting and listing by the piece
Will have Allied and Layafete catalogs and a pile of Fair Radio stuff
soon. TNX, Craig

Swap Meet, Auction, Business Meeting. Looking forward to a great day in

Meridian's fabulous Highland Park

It's ONE WEEK from TODAY!!!

So far we still have no idea how many people are coming (as usual) -
but we've had people saying they intended to come from as far as Texas
and New Hampshire; several from Mobile, Birmingham, Baton Rouge, New
Orleans and Memphis plus many from around the state. So far most have
noted they intend to bring a bunch of radios - the ones that came to our
last show remember that there weren't many radios brought for sale - and
everyone was near sold out before noon...

MHR&BS Announces it's 1998 Annual Meeting:
Radio Sings Spring in the Park --- April 11 Highland Park, Meridian, MS
Details:
http://home.cybertron.com/~comcents/mhr/april11/april11.html

I would be interested to know about this also.

The Johnsonpart number is 22-1307 but they do not describe it much in the
manual. My guess is that it may be a 120V relay (???)

I wish that they had covered that relay in a bit more detail!!

You are correct Bry, the book shows the divider to supply about 110 volts to the relay coil. I'm going to try a PB plug-in type, I have several at 110VAC. I've computed the dc resistance given the R constants and the divider voltages. If the AC P/B relay works, I'll let you know. I just happen to have a bunch of the DTDT relays and the associated surface mounted relay sockets....we'll see! Also, tnx to the others e.g. Newark having plate relays and as one person suggested, use a different voltage; that's what I did in my Viking II to get PTT. Again tnx to all!

For sale: several 866 mercury vapour rectifiers. (4 total)

Two of these have to be probably the UGLIEST tubes I ever saw!

Of course it is not unusual for 866 tubes to get grubby looking with that mercury in them! Big S bulbs - 4 pin bases.

These are in GE boxes, but they are ancient RCA Radiotron tubes, not GEs. Will sell the pair for $10

ALSO:

One GE 866A Junior - slightly used and tested. Looks very good. $7
One RCA 866A full-sized. Also marked VT-46A used andtested. $7

Selling Used Tubes with Actual Readings--No Luck of the Draw Like Cheaper "Pulls".

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube--which high volume dealers don't have the time economically to provide.

Some Tube dealers will charge obviously less for these 45 "used tubes," but often you get what you pay for. I've seen prices of $30 to $40 range for example. BUT--It's the luck of the draw if you get a strong one or weak one that meets minimum standards. With these two RCA 45 tubes you know exactly their readings.

These two RCA 45 tubes were evaluated on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously).

I have had this experience of buying from big name honest dealers and getting weak pulls as well as good pulls. Again, luck of the draw for a cheaper price.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

179. Henry DC Filter Choke w/Caps

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-04 00:00:00 UTC
From: "Lane C. Zeitler" <km3g@cts.com>

Have a henry DC filter choke. Used with the 2K series power supplies. It is a 4 hy choke that resonates at 120hz with the three tuning caps. Henry used it to handle 3200 volts dc at 1 amp. I've run it at 4000 volts with no hints of a problem. Could run it through the hi pot and see where it starts to breakdown.

$75.00 for the choke and resonating caps. You ship from San Diego zip 92139. These are HEAVY---around 70 pounds total weight.

Two seperate xmfrs on the same core. 120 volt primaries. 2200 volt
secondaries. I ran it in series for 240 in to get 4400 out. Rated at
something ridiculus like 2 to 3amps. This thing weighs about 120 pounds.
Stands around 14 to 16 inches tall. Originally used to run (2) 4-1000As.

Shipping is impossible. Pick up only in San Diego.

$100.00 (less than a buck per pound!!!)
Neat old fashioned iron!!!!

Hi is your PTO/VFO made by Collins or by COSMOS industries... it is VERY important ...COSMOS PTO use a rack/cam type corecctor and Collins uses a second coil and adjustable leaves... If yours is a COSMOS DO NOT TAKE IT APART ...if it is a COLLINS there is no problem as long as you Mark the DIAL FREQUENCY and LOCK it in place... I have rebuilt/restored many COLLINS PTO's with no problem though the nitrogen escapes when opening the actual pto cover... You might try some penetrating type lubricant and turn the PTO OVEN ON for a couple of hours... if this helps then you may be on your way... BTW the 390A and 390 PTO's are interchangeable but the cables are not... IF your's is a COSMOS PTO it may have corroded in the Cam/camrider ass'y ... if it is a COLLINS PTO and won't budge it may have slipped past the travel stops at the extreme end of the PTO it would the have to be opened... DO NOT FoRCE A COLLINS PTO... you will bend or break the correction roller... inside it is a thing of beauty... when you go to re-assemble the PTO place it on a cookie sheet to heat it to about 200-250F then carefully (it's hot!!!) replace the cover... Upon cooling the nitrogen will be replaced by a vacuum which is just as good... 73 de Jordan VE2SWL/VE6...

It is either two 120vac 15 amp or two 120vac 20 amp variacs connected end to end. I ran them in parallel as a 240 vac variac with my 4-1000 supply. Each section is at least 15 amps but could easily be 20 or even more. It is VERY VERY heavy and rugged. I will sell it for $85.00 as a unit. I will not even try to seperate it. It looks like it was meant to be used as a single unit.

You cover shipping from San Diego zip 92139. VERY heavy, around 90 pounds or so.

Lane

Message-ID: <3526D142.174F@erols.com>
Source record: 107397

Michael,

Now you've gone and done it again. Just when the Left-Handed "Bug"
thread had started to die down, you stir things up with a "Short" bug
base question!

There are two normal base sizes, but the difference is width.
The normal length of the base is about 6.25 Inches.

The narrow base is 3.0 Inches
(Martin Junior, #4 Blue Racer, and Zepher Models)

The wide base is about 3.5 Inches
(Original, Presentation, #6 Lightning Bug, and Champion Models)

The "Bumper" is in the case to protect the thumb piece/knob, and would
be in any case - rather than a special mod. The only thing that comes
to mind is the case was adapted to carry one of the Vibroplex Iambic
Keyer Paddles. I don't know what the length of those bases might be.

73, Dave K7HMP

installing a Tuning Eye tube in a receiver. It is complete with
mounting Bracket, Metal escutcheon, Plug, wire, and screws...also has
instructions. NEW in Original Box....

PRICE.......$7.00 USA
##
TV-7262A Vidicon Cathode Ray Tube. Small sized. USA Used Condition.

PRICE........$3.00 USA
##
General Cement...Dial Cord Dressing Stick. For preventing slippage on
dial cords. New Old Stock.....Simply rub it on the Dial cord.

PRICE........$2.00 USA
##

G.E. Canada 2A3 Tube. Used....Tests Excellent.

PRICE.......$15.00 USA
##
Type 45 Tubes.....Used ...tests as noted below....

Westinghouse Canada...tests VG
G.E. Canada..........tests Good
Marconi Canada........tests VG

PRICE is........15.00 USA EACH.
##
Audio Transformer...Used Condition. Can't make out the Manufacturer's
Name on the Side of the transformer. This is a fairly large unit.
Looks like it says "Type OPM-XC"?? Has 6 Screw lugs...3 per side. One
side says Plate, +HT +B, Plate. Other side says Speaker ratio 25/1
40/1 66/1

This is a nice looking transformer...but I'm not sure what it's
from...or who made it.

PRICE ....$5.00 USA
##
Large Sized Half Moon shaped Metal Variable Capacitors. I have 4 of
these 1920's/30's Capacitors. One has Steel Blades..the Other 4 look
like Brass bladed.

Used Condition...but very nice shape.

Have 5 of these.....

PRICE.......$3.00 USA Each.
##
Hearing Aids. These are old 1950's/60's Transistorized Metal Cased
Hearing Aid Units.

Zenith Royal M
Small Gold coloured Metal with Pocket Clip.

Maico Chrome Coloured Metal with Pocket Clip.

Both are in Exc. Cond. Maico unit has the # 60 engraved on the back.

Used Condition.

PRICE.........$10.00 USA for both.
##
Shure T-17B Military Hand Mic. 1944 USA. With original Cord and Plug.
Like New...in Original Box.

PRICE........$20.00 USA
##
ElectroVoice 715 Ceramic Hi-Z Mic Head. Chrome . New in Original Box
with Cord and Papers.

PRICE........$25.00 USA
##
PHILMORE M-55 Carbon Lapel Mics.............

They are NEW in The ORIGINAL Boxes. These are Small Carbon Lapel Mics
which are made in JAPAN. They are about the size of a 50 cent Piece
and about 1/2 " Thick.Suitable for Mobile PA Systems,Civil
Defense,Hams Etc. Supplied with Lapel Spring Clip. Black Plastic Case
and Furnished with 3 -1/4 Feet of Shielded Cable. Still sealed in
Plastic....and complete with Original Red and White Boxes, that say
..Philmore Mfg. Co. Inc. Richmond Hill, 18, NY. Made in Japan. Some
Minor writing on the boxes. Appear to be from Late 50's or Early 60's

PRICE.........$8.00 USA Each...Plus Postage.
##
Pye Type Z PTC-4001 Microphone. England. Vertical Styled Mic...Green
Metal and Chrome. Has chrome Stand and Green Metal Base with
Red/Chrome "PYE" Logo. 1950's/60's??? Push to Talk Button.

Used Cond...VG+

PRICE.....$20.00 USA
##
Altec 633A Microphone. This is the Grey Metal Salt and Pepper Shaker
Styled Mic. Complete with Metal Gooseneck stand and Cable.

Used...VG Cond.

PRICE......$20.00 USA
##
Armaco M-131 Bullet Mic head. Green Painted Metal. Complete with Cable
and Phono plug. Has a Chrome Face.

Used....VG Cond.

PRICE........$15.00 USA
##
Teisco CM-20 Bullet Mic Head. Gold Painted Bullet Mic with Nice Chrome
Face....looks like a Propeller from the front ....1950's Cool!! This
is a crystal Mic....Made in Japan.

Used...VG+ Cond.

PRICE......$20.00 USA
##
Aviometer Corp. Model 9104 Miliatry Hand Mic. NAF No. 213264-6 USA.
Complete with Cord and Plug. Push to Talk Button. Made of Black
Bakelite.

Used...VG++ Cond.

PRICE....$20.00 USA
##
No-Name Teardrop Base Handkey. This looks like the McElroy Teardrop
Based Keys...but I don't think it is a Mc??? Base is Made of

Metal...Grey wrinkle Painted, and is Teardrop Shaped. Has a Navy
Styled Knob, and Nickel/Chrome Hardware....a little weathered.

VG - Cond.

PRICE.......$15.00 USA
##
Miliary Key...J-37. Black Metal Base and Nickel Hardware. Mounted on a
nice Cherry wood base. With Plug and Cord. Like new Condition...Nice
Key!!

PRICE......$20.00 USA
##
Bunnel Handkey. Rectangular Based Handkey with fat Navy Type Knob.
Brass Hardware. Mounted on a Black platic Base.

Like New Cond.

PRICE.......$20.00 USA
##
Homebrew Practice Oscillator and Handkey Combo. Mounted on a nice
wooden board.Has a Chrome Cased Buzzer, a Black Metal Based Handkey,
and 3 Nickel Binding posts. Nice little Homebrew set....

VG Cond.

PRICE......$15.00 USA
##
Signal Electric Mfg. Co. Menominee, Mich. Code Practice Oscillator. No
Cover on the Buzzer. Complete with Handkey Mounted on the Burgundy
Metal Base. Has 3 Brass Binding Posts. Also has Brass Nameplate
showing the Morse Code ....

Good- Condition..a little worn.

PRICE........$10.00 USA
##
Sounder .....Western Electric Model 3C 140 Ohms. Made in USA. Nice
Brass hardware and Mounted on a Black wooden Base.

VG++ Cond.

PRICE......$50.00 USA
##
Sounder.....JH Bunnell Co. Model 1B 400 Ohms. Made in USA. Nice Brass
hardware and Mounted on a stained wooden base.

VG Cond.

PRICE.......$35.00 USA
##

That's it for today boys......My typing fingers have had it!! Hope you
all find something you like!!

For Sale, Henry 2K-2 Amplifier

I have a Henry 2K-2 floor console Amp for sale. It is in very good condition. It runs a pair of 3-400Z tubes that have full output 1500+ watts output. It works on 10 through 80 meters. Has tuned inputs. It uses forced air cooling with chimneys on each tube. It will run eater 3-400Z or 3-500Z tubes. 220 Volts only.

$700.00

Will not ship, but would meet within 200 miles of Eureka Ca.

These are not so rare. A guy who advertised in Pop Comm a few months back had lots of em new, in box for $18. They are interesting solid state BA radios and very easy to put on the air (AM). Just add batteries and xtals. They are made by Hallicrafters, but no "h" logos. They had a panel knob sequence that fired a squib to blow up the innards, preumably to be done upon capture . The "bang" squib is removed from the ones being sold. There may be several differnt models, some going up into VHF. Most cover about 25-55Mhz. Anyone else know more about these?

219. FS:Knight-Kit R-100A "PARTS" radio

I have a R100A parts radio for sale. The parts radio is 90% complete. There is one tube missing and at least one electrolytic missing. I do have the cabinet for it. It does not have the optional S-meter but it does have the optional crystal calibrator in it. The parts radio goes for $25.00 plus shipping from the Chicago (60516). I will also include a photocopy of the assembly manual and a photocopy of an article on adding a product dectector to the R-100A. Just FYI, when packed, the weight of the package comes to around 35 pounds, so hop on the UPS "Quick Calculator" web site to get an idea of how much you'll pay for shipping.

221. Gonset Communicator IV's 220MHz

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-05 00:00:00 UTC
From: Scott Gray <comm5@pacbell.net>
Message-ID: <35273A09.EC7F6B9E@pacbell.net>
Source record: 107274
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,forsale-swap@qth.net

Gonset Communicator IV - 220 MHz version. Model 3351.
~New in the box~. Circa 1962. Mint - "10" find in
a nice atmosphere time capsule.

Includes factory transmit (and receive) Xtals for 222.500 MHz.
Gently removed, powered up slow (variac). Meets and exceeds Factory
specifications. Plastic packing cover, manual and warranty card
included. Also
in the accessory bag is the AC and DC power cords and a extra mic plug
(pl-068).

The Gonset Comm IV's were quite a nice VHF rig. Unlike the earlier
Communicator
models which were tall and difficult to run mobile, the IV was a much
lower profile
set suitable for mobile work. The IV model also had a completely
different
"TVI proof" transmitter design - using link coupled multiplier stages to
the final
6360 output tube. RF power output is 10 watts typical.

The 220 MHz model is the rarest. The 6 and 2 meter models were more
common,
but still a tougher "catch" than the one eyed "gooney bird". The 220 MHz
model
has a crystal control receive (on the rear - socketed) as well as
tunable receive.
Tunes 219 to 225 MHz. 20 watts input power, AM plate modulated by a pair
of
6BQ5's. Six panel selected transmit crystal positions (8 or 24 MHz
range).

These were the only mass manufactured amateur 220 MHz transceivers in
the
world..... Until about 1976 - when the Midland (OEM), Cobra and Clegg 12
channel FM
rigs appeared out of the Far East - in anticipation of the "CB
takeover" of the 220 band.

The most common Gonset Communicators were "civilianized" by swamping
the IF cans for a broader IF bandwith. These were customized for Civil
Defense
operation. I guess the CD spec required that a receiver should "hold-up"
for
trembling hands during and after the "big one" hit ground zero......

Comfort then was your own backyard bomb shelter, a large stash of canned goods,
and a Gonset Communicator.... "Duck 'n Cover"!

This unit is NOT the CD model, Many were painted a bright yellow along with
the large CD logo plastered on the sides. Scores did get past the dude with the
yellow paint and CD stickers - sold outright to hams - less the bright yellow
exterior. But the 'broad" IF got shipped.

The IF selectivity on this model is quite sharp. NBFM slope detection is excellent.
The matching VFO (common swap meet find) has audio input for NBFM. I do not have the matching VFO. NBFM transmit with Crystal control is a simple (and
reversable) modification.

Any interest?? I have ~TWO~.....!!! One has not yet been removed from its
original box, just opened to verify contents.

I'm Willing to swap one for a 6 meter Communicator IV but would be also interested in
other "high end" 6 meter AM gear by Clegg (66'er or Thor) or Gonset (G-50).
Will also consider a Gonset G-76 w/ AC P.S or a Gonset G-28 10 meter AM rig.

Will consider swapping BOTH for a Drake "B" or "C" line. Light duty HF linear amp
(4 -811's).

Assuming a cash value of approximately $400 US for the pair. Prefer trades.
Please no 2 meter FM stuff......

I did a post about these sometime back on rec.radio.amateur.boatanchors and got quite a response. Many goodies were offered up for a swap, I seem to
have quite a collection as things are. Nobody came forward with Gonsets or Cleggs.
Many thanks to those who did respond.

In Cameron Park, just east of Sacramento, Ca..

232. Re: Collins R-278 B/GR Info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-05 00:00:00 UTC
From: James E Kearman <jkearman@javanet.com>
Message-ID: <6g88vv$q7j$1@as1000.javanet.com>
Source record: 107285

This radio was in use in the 1960s at US Air Force Tactical Air Command Ground-to-Air Transmitter/Receiver (GATR) sites. It was probably manufactured in the 1950s. Each GATR site had about 20 UHF-AM channels assigned, and GATR sites were linked via phone lines to central locations. When the Russian bombers appeared off our borders, the fighters sent to intercept them would communicate via the nearest GATR site.

GATR sites were associated with tactical radar squadrons. The one I was at was located off-site, near Airport Road (?) in North Charleston, SC. A Holiday Inn was built nearby while I was there. I hope the guests enjoyed the view of our antenna farm!

Anyway, each channel had a dedicated single-channel transmitter and receiver, and please don't ask me to remember the nomenclature. More important channels had backup equipment of the same, single-channel type. The R-278 and its mating transmitter (see earlier note re nomenclature!) were used to backup the other channels when the equipment for those channels was undergoing maintenance. In other words, we'd retune the R-278 and transmitter (was the pair called a GRC-27???) to the frequency of the equipment we were about to work on and make the necessary audio patches.

I understand they were also used in control towers at military airbases; in fact, you would probably have found them anywhere military ground-to-air communications was taking place.

Aligning that receiver of yours was considered on a par with Black Magic, and few were the techs patient enough to do it. You have to bend a zillion tabs on the variable capacitor plates etc etc. Too much trouble for my taste!

As to value, I can't say. It really isn't good for much anymore, when so many scanning receivers cover the same frequency range. A military collector might want it, or a museum, but I doubt they are very scarce. Every GATR site had two, and GATR sites ringed the Continental US in those days, not to mention the units at airfields. I saw a pile (literally) of the single channel stuff I mentioned, at a hamfest in northern Vermont back in the late 70s, BTW. There's nothing like seeing the equipment you cut your teeth on dumped in a field like so much junk!

73,

Jim, KR1S

792nd Radar Squadron
North Charleston AFS, SC
1966-68
(At least I remember that much)

242. Hallicrafters for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-05 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <1998040517362901.NAA05764@ladder03.news.aol.com>
Source record: 107295

Lack of space is forcing me to sell one of my stations. The Hallicrafters station consists of the SX-101A receiver, HT-32A transmitter, T.O. Keyer, R47 speaker, Hallicrafters "logoed" mic. (actually a Turner), all manuals, and even an original Hallicrafters desk logbook (with this rig on the cover). I would describe the condition as 9.5 out of 10. Asking price for the complete station is $600. Please do not ask me to separate any of the accessories. Because of the size and weight, these would be either for pick up at Greenville, SC, or delivery to Dayton.

Jon, K1VVC

Jim
Many Thanks for your info, I think I'll try to find someone with more time than I have to play with it - I can't bring myself to junk or scrap such kit! it may of more interest here in the UK.

249. WTB: Panoramic Products PS-8 or PS-8b power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-05 00:00:00 UTC
From: kd5byb@wt.net
Message-ID: <6g9410$ja8$1@nnrp1.dejanews.com>
Source record: 107302
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Need a Panoramic Radio Products PS-8 or PS-8a power supply to go with a Panoramic SA-8b panadapter I own.

I could build a replacement easily, but I strive for completeness.

Note that at some time, Panoramic Products and Singer were in cohoots, had merged, made products under the same military contracts, so I'd also be interested in a Singer power supply with the same or similar nomenclature.

Please e-mail me direct at kd5byb@wt.net

Thanks for the read and 73,
Ben

250. Addition of Q-Multipliers to various receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-05 00:00:00 UTC
From: jfjbarna@sciborg.uwaterloo.ca
Message-ID: <EqypFB.Itr@watserv3.uwaterloo.ca>
Source record: 107303

Hello fellow anchorites!

I own R-390A, SP600-J and HQ-180C and would like to add good ol'
Heath Q-multipliers to the HQ-180C and SP600-J (or to be more exact I'll
get a pro to add them on assuming I can find one here in Montreal). Where
should the connection between the Q-Multipliers and the rigs be made?
Since I don't believe in "lazy" receivers I feel the addition of
Q-multipliers will help me in my DXing but I'm ignorant enough as to where
the connections should be made. Any and all advice greatly appreciated!

Hi,
this may sound like an unreasonable request...but, I would like to buy a rig for an old friend of mine who is a ham and would like to get back on the air, but because of personal expenses, kids in college, medical bills, etc., he cannot afford to buy a radio. I recently saw an Heath HW32A + power supply go for $50 here on the internet. I just wondered if anyone has a similar rig (single or Multi-band transceiver) that they would be able to part with for a very reasonable price so I could get this guy a radio and get him back on the air. I'd be willing to pay around $100. As long as the radio is in working condition and will receive and transmit with more than QRP, I'd be interested.
Just asking.
Thanks & 73's
Jack

Hello All,

The AM North America website has just recently published a branch site dedicated to Leo Meyerson and his companies. With the help of Leo himself and Jim Musgrove, K5BZH of Ft. Worth, Texas, it may prove interesting to many. At this time, there is a section of photo's and an extensive list of WRL products with complete description of each. The site is in it's infancy but much more is expected to be placed on the page(s), specifically, historical photos of equipment, etc.

Your comments and suggestions are needed and appreciated!

Here's the direct link: http://www.qsl.net/w5ami

Source record: 107217

>If there were later solid state ones, I would like to know
>more, too.
>
>Bob/NA4G

I've never seen a tube version - mine are of the $18 NIB variety, Hallicrafters HT-1E all solid state and cover 30-40 Mhz AM. They also made the HT-2 model which added a VHF transmitter and converter for the AM aircraft band (so the villages could call in air strikes ?!?)

I've got the manuals and also the Hallicrafters test set, but rather than going the plug-and-play 10 meter route, I converted mine to 50.4 Mhz. The receiver converter stage took a lot of fiddling but they are a kick at hamfests. If you want to fiddle around, use a 46-49 Mhz crystal from a toy or cordless phone to get the Ls and Cs in the ballpark.

You won't need the self-destruct squib after hauling one of these babies full of batteries around all day!

PRO-2004: Good condition. Fully operational. All common mods. 400
channels. Bright backlit display. Sorry, no manual. $275.

BC-100XLT: Good condition. Fully operational. Best audio ever in a
handheld scanner. Manual, AC adapter included. Sorry, no antenna; has BNC
connector for any existing antenna.

For either, I will pay shipping. Email me with questions.

Howdy Chris.....re yer HQ100....You say the voltages are all ok after the point that the audio dwindles to nothing....was this only plate voltage you tested? Best to check the screen and control grid bias (you'll need a hi-z meter VTVM etc) and make sure it is slightly negative with respect to the cathode......check the cathode bias. Now....with respect to your hum and then this dwindling audio....I'd be looking hard at the cathode bias resistor and its bypass capacitor...common failure areas. Do you have a scope??? Scope the audio all the way through....I have a HQ110 here but don't know if the schematic is real close to your 100. Scope and bias.....you'll find your trouble!

For Sale: Collins 310B exciter. This is the unit w/o the antenna tuner, but does have the reast of the junk. There is a blank plate over the front panel holes and engravings for the tuner. The front panel is in good condition, all knobs are in place and original, One plug in coil for 40 meters is in the unit. Dial is in excellent condition and dial cord is in one piece and strung. This is the rack mount version and therfore no cabinet. Chassis is cruddy by no corrosion. Unit fires up, but no attempt was made to use it. Have had it for quite a while with great plans, but time marches on. Tried to trade it, but no one seemed interested so let's see if there is any interest in a cash deal. $250 plus UPS from zip 95827

REMOVE NospaM from my address if you reply

HICKOK Tube Tester

I have a roll chart which appears to be in very usable condition, still wrapped around cardboard in the envelope the new chart updated arrived in. Except for the very end the paper is still white and looks firm as when new.

It is dated 3-1-56 and says: MODEL 533A-533DM (Series 600)-535 600A-605-6-5A Tube Testers

If this is something you can use, make me an offer.

I wish I hadn't sold my Hickok tester!!!!

301. Re: Addition of Q-Multipliers to various receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-06 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <1998040600183700.UAA06159@ladder01.news.aol.com>
Source record: 107328

Hello John,

The Q-multiplier should be connected to the plate of the mixer that converts to the 455 kc. (kc. because this is the BA newsgroup) IF. It's a good idea to have a .01 uf disk ceramic coupling capacitor in series so that there's no B+ on the connection. A short length of low capacitance coax (RG-62 is best, but RG-59 or even RG-58 will do) should be used for the connection. The usual way to install the connection is to run a short piece of coax from the mixer plate to a BNC or RCA phono jack on the back of the receiver. The Q multiplier then plugs into this jack. Usually the first IF transformer will need slight readjustment to compensate for the added capacitance. This adjustment should be done with the Q multiplier NOT plugged into the added jack.

The Heath QF-1 has an adjustable inductor whose purpose is to cancel out the reactance of the connecting cable. This permits the receiver to be used with or without the multiplier connected - and you don't have to realign anything.

Of course an HQ-180 and SP-600 are quite a bit more advanced than the old Heathkit AR-2 I was using.....(1967)

Trade : Kenwood MC-85 deluxe desk mike in very good condition w/ 8pin cable wired for TS-440S for Icom SM-2 desk mike.

The MC-85 works but has some distortion of the audio (RF? or maybe dead batteries?). I don't have the manuals for it, but it is in very good shape. The Up/Down and PTT buttons work fine.

Need SM-2 Icom desk mike for my Icom IC-701.

E-mail KB4AEP@juno.com Thanks.....73's

305. Need info on Viking II

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-06 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <1998040602260601.WAA01577@ladder03.news.aol.com>
Source record: 107332

At a hamfest this weekend I purchased a nice Viking II, with a copy of the oprn. manual. In tracing the circuit to verify mods, I find that I am missing a portion of Modification B. I have (2) pages, thru step 28. The missing portion covers the installation of an antenna changeover relay. I can see that there is no longer 110vac available for my DowKey, and a 1/4" phono jack has been installed. There seems to be 6vac across this jack on xmit.

Can anyone help by forwarding a copy of the missing steps?

Thanks,

K&#65533;MB

There is nothing magical about the KWEa receiver. It's
maybe unique in the weight and the fact that it's built on
one tube type thru out.
It's hard to believe that Collins gear was replaced because
the AGC time constants weren't as "good" as the KWEa's.
I think the technical people at this meteo station were
incompetent, if they could not solve this problem with
more modern gear.

Aye, thar matey..... no self respectin' chops would be complete widout
his bugge and wedge, and his tin cans, too.

It be not properly dressed, it be.....

I still run all my bugges with cords and wedges. Alas, good old fashioned
flexible cord wedges are getting scarce. I hate the stiff plastic covered
wire things these days. Anyone know of a source of proper cotton covered
tinsel wire wedges?

They are probably not all that rare, but they are tube models, and the
red descruct button in them is wired across the AC power supply, to nuke
the power supply. There are no pyrotechnics inside, or none in mine, and
none ever removed from mine. It was a cute trick to disable the radio,
but it could be rebuilt if needed. The frequency range seems to be about
25-35 mhz, AM. If there were later solid state ones, I would like to know
more, too.

>What/why would this be added?Drawbacks?

A Q-multiplier is simply a regenerative stage - an amplifier adjusted with just not quite enough feedback to set up an oscillator. As the stage feedback is adjusted with a front panel control, it gets closer and closer to oscillating. The signal amplification factor shoots way up as does the effective "Q" (quality factor) of an associated inductor. The end result is a very selective circuit. Another control varies the frequency of the stage to act as a way to peak a single frequency from the range of frequencies in the receiver IF bandwidth.

However, a crystal is an electro mechanical device that is already very selective and does not have the noise that is amplified with the regenerative stage. In fact, a crystal filter is probably more selective. Better receivers of the era included a crystal filter circuitry as part of the receiver design. However, a crystal filter is not tunable across an IF bandwidth in the way a Q-multiplier can be adjusted.

Q-multipliers and regenerative IF stages for that matter were popular considerations when hams attempted to enhance a receiver. Q-multiplier stages were sold by Heathkit and others as attachable accessories and provided a means to null as well as peak a signal, and were good at peaking a CW signal, or suppressing a heterodyne in the good old days when AM signals crowded the amateur bands and carriers bumped into each other.

Typically, a Q-multiplier was attached to the grid of a tube IF stage by a short piece of coax which lead to an external box holding the Q-multiplier circuitry. B+ and filament power were usually borrowed from the receiver. In order to work, the Q-multiplier had to operate at the same IF frequency as the IF stage, commonly 455KHz.

Benefits? Some increased sensitivity in a very simple receiver such as an Hallicrafter's S-38 or Heathkit AR-3. Much better selectivity in those simple sets and also a way to notch out to some degree adjacent signals.

This was a benefit for CW and when many heterodynes were on the band. Remember, DSP was not available in those days! They also offered a second tunable circuit in the IF stage if the receiver already had a crystal filter.

Detriments? They really didn't work all that well. Shielding was always a problem, tapping into the IF stage of the receiver usually meant realigning the associated IF stage slightly, and the effective Q of the accessory wasn't really all that high. Further, extra filament voltage is not available in a Hallicrafter's S-38 (series string filaments in an AC-DC configuration) and surplus power was often not available in a set like the Heath AR-3, because the power transformer was already over-taxed by the standard components. The power transformer in an AR-3 simply runs hot as a pancake.

However, they are a novelty these days and are fun to play with if you don't have to rely upon them.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $225

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $225

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $250.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50 OBO

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. several $5 each.

Noise is determined by band width. More bandwidth = More noise. As
selectivity is made more narrow, the amount of noise available to the
detector is decreased.

In fact, a crystal filter is probably more selective.

Then what is the thing I have? It uses a 9 pin oscillator tube
and a 12 volt 6146ish output tube? Maybe an earlier model?
The Vietnamese script is all over the front of it, and it has an AC
cord and mike that wraps up into the front cover. When I took it apart,
the red destruct button was wired across the AC supply, and it did
not look like it had ever been modified. The size is about 6 inches
high and 16 inches wide and maybe 12 inches deep.

It has been several years since I opened it up, and I dunno remember
if the receiver was solid state or vacuum tube. It may have been SS.
There were sockets inside for one or maybe two hc-6 xtals.

Very curious.....

I have some parts that I have remaining from an SB-401 I robbed from to
get mine going. The major stuff I have is:

LMO (two of these)
All PC boards (I think there are 3)
Tubes (except finals)
XTAL filter
one 3395 xtal
front dial assembly
front panel (has had a hole drilled in it and later plugged with metal plug.

I pulled the power xfmr for mine.

I'd like to trade for good 4CX250's and associated sockets/chimneys, or
Jennings RJ1A vacuum relay, or other RF stuff.

>VE2SWL/VE6...

Please explain what makes 12BH7 much better than 12AT7/12AU7? In this RX
one half of 12AU7 is BFO and the opposite triode is detector, IF i/p on
grid, with decoupled emitter and small capacitor from BFO to grid of
detector. One suggestion is to connect the injection to the cathode, but
I suspect that this has low conversion gain, so I would rather connect
IF and BFO signals in series to the detector grid. I don't see any
important reason for using balanced detector. I once tried to improve
12AT7 balanced IF mixer in FL-dx-500/FL-200, but when balance was
improved the gain went down, so eventually I had to remove any
modifications and return the the old circuit.

342. FS: Millen 90651-A Grip Dip Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-07 00:00:00 UTC
From: mc@shore.net
Message-ID: <6gdvuk$1uc@northshore.shore.net>
Source record: 107170
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

This Millen Grid Dipper is missing one of the six plug-in coils (4.5-6.8 MHz) but is working and comes with five coils covering from 1.7 - 150 MHz (except the freqs mentioned above).

I have an extra A coil (1.7 to 4.5) and if you're good you can remove a few turns of wire and make one that will work in the missing portion of the bands.

I am asking $75.00 for the GDO. I also have a parts GDO (missing the meter) available for $25.00 or the pair for $90.00 plus UPS costs.

If interested please reply by e-mail.

Of course agc performance is not the most important with very weak signals.

Discussing communication equipment, I just can't understand what makes somebody to believe that Collins equipment has high operational performance. It may last much longer than comparative Heath, Drake, National, Hallicrafters etc, but operational quality is not much to shout about!
While Collins never seem to understand how to design a good operational AGC, Drake did, and according to my handbook the 51-S receiver was produced until 1976. I dont know the 75-A series, only the 51-J and 51-S, we had many of them at Rogaland Radio, non of them were good for ssb. Apart from the selectivity, most American equipment made before 1960 add hardly much improvements over a BC-receiver anno 1937.

What makes KwEa/LwEa/E52/T9K39/MwEc better?
1) It has a functional agc with time-constants selected for different modes (CW or AM).
2) It has good selectivity, 6 IF selectivity position and two extra audio filter positions, including alternative BFO frequency (opposite 'sideband' - switches between 250 and 251.8kHz with 250.9khz IF)
- I am aware that Collins equipment also has good selectivity.
3) A most important point is the application of audion detector, which has some advantages pulling weak am and cw signals out of the noise (may be compared to quadrature am detector).
4) It has 5 tuned RF circuits, this improves intermodulation
With 250kHz IF the image rejection is claimed to 78dB on 10MHz! It may even operate 1-3MHz without any pre-selector. 51-S is useless on mediumwave, without an auxilliary pre-selector. You don't have to fight with spurrs.
Sideband-, diversity-, DF- and other adapters are available for the E52 receiver. E52, EZ6, MwEc and other have xtal filters as for Collins and other receivers.

When the weight is still high it is for the reason that it is so many components, while this is not true for another receiver you can compare with - Hammarlund Super Pro SP-100 or BC779/SP-210.

They are heavy and they need substantially more supply current.....
is it in the region of 350V 80mA, 250V 100mA, 6.3V 10A....
KwEa with 11 valves draws 2V 2.2A, 100V 25mA

Using European valves in my BC-779 (SP210) might reduce the heater current by some 2-3Amps.

A note to demonstrate how important a good AGC is: I've been visiting many amateurs since I got my license in 1966, many had very bad operational performance, very often the rigs has bad AGC (on of the worst I have experienced is Trio TS-500) but they were very pleased having purchased the latest on the marked. I remember we ran the LA1X at an exhibition in Oslo 1969, we had borrowed the latest "Japanese technlogy" TS... transceiver. It did not attract any interest, people avoided us, but LA2DL went home and brought his Drake TR-4 tranceiver..... and very suddenly it was rather crowdy around our stand - ordinary people could understand what was said on the opposite side.... Even a Collins receiver is very easily modified to extremely good AGC performance, but the sale value may be decreased, so I bet you dare not do it...?!

346. 1940s-era oscilliscope needed for PBS documentary

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-07 00:00:00 UTC
From: Gino Delguercio <ginonodelg@aol.com>
Message-ID: <352A9139.5C8051B0@aol.com>
Source record: 107174

I'm looking for a 1940s-era oscilloscope to use in a PBS documentary about the invention of the transistor.

We're doing a scene in a lab with William Shockley, John Bardeen and Walter Brattain in 1947 and they are supposed to be looking at a voltmeter and an oscilloscope. If anyone has a vintage oscilloscope that they would be willing to loan us for the production, I'd love to hear from you. The shoot is in the Boston/Providence area. The oscilloscope doesn't have to work, but it would be nice if it did!

Please call me or Gino Del Guercio at 508-238-8677 or email at retzinger@aol.com. If you have any suggestions of where else I might try looking, I'd be happy to hear them.

Bob,

That sounds like one of the other village sets - not an HT-1 or HT-2.
Hallicrafters made a series of radios for use in Vietnam and elseware.
What you have appears to be one of the base units.

These are sometimes hard to identify as data is often limited.

349. Qst: Mercury-vapor and Xrays??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-07 00:00:00 UTC
From: adicker113@aol.com
Message-ID: <1998040722081701.SAA02131@ladder03.news.aol.com>
Source record: 107177

I am working on a vintage transmitter and I noticed mercury vapor rectifier tubes
a warning that they will produce harmful xrays if operated near or above 10,000 volts.
My question is: Do mercury vapor rectifiers produce xrays all the time and the amount just begins to become harmful near 10,000v ? For example, if they run at 5000v, is there any xray production? I just want to be safe if this thing starts working.

thanks for the input
Alan

Message-ID: <352AAD9A.3536@et.anl.gov>
Source record: 107178

It's the potential voltage that generates x-rays. At around 10kV
electrons can acquire enough energy so that when they slam into the
anode (or cathode, depending on your view of "current" flow) the rapid
deceleration produces x-rays. Mercury vapor has nothing to do with
generating x-rays. The electrons in the current strike electrons in the
metal-matrix atoms producing both "brehmstralung" or broad spectrum
x-rays and characteristic x-rays of the metal-matrix.

I have a hamtronics five watt two meter repeater for sale.
It has a r76 reciever. A t51 transmitter. cor board and cw id'er.
mounted in two hamtronics rf tite boxes witch are on a aluminum plate.
Can be put in a rack. Also have all paper work and two sets of crystals.
one on 147.375/975 and the other pair on 147.240/940. Repeater works
great in a duplex operation.It is suggested that if you use a split
antenea system to seperate by at least 150 feet apart. Repeater is 100
percent working and the receiver has a .25 mv sen. The only reson for
saleing is I have two other repeaters and need to cut down on inventory.
I am asking $250.00 plus shipping. This system would cost about five to
six hundred dollars to purchase new and it is in kit form. So you want
have the hassall of building it.

From: GregoryR <gregjr@teleNOSPAMport.com>
Message-ID: <6geolr$bb1$1@news1.teleport.com>
Source record: 107185

A friend has offered to sell me his R390. I don't know much about the radio in general or his specific model. It's rack mount size, so I suppose it's not a 392.

He's said to make him an offer as he'd love for me to have it and he's not interested in it any more. I don't want to rip off a friend (or myself), however. What do these radios go for nowadays? Does anyone have a source of information on them? Books? Magazines? Internet Sources?

Thanks!
Greg

I had a bunch of repro tags made up for the guys who got rigs with no tags
at all.
To avoid confusion with the originals, the tags are made with a unique, factual,
but generic design. The fit and finish are just like orig of this size.

The repro R-390A tags are 1" x 2.5" etched aluminum, and they read this:

RECEIVER, RADIO R-390A/URR <== this type is larger

DESIGNED BY COLLINS RADIO COMPANY
CEDAR RAPIDS, IOWA
FOR SIGNAL CORPS, U.S. ARMY

NSN 5820-00-538-7555 <== this type is larger

115/230 VAC 48-62~ 220W

The tags are $9 ea, $16 for two, or $35 for five.

Hi Emigdio.

I saw this unit on this listing last week but It disappeared from the list.
If you will take time payments. Like $200.00 a month for 3 Months, I would like
to buy the unit from you. I will pick it up when it's paid for.

73's and thanks for reading this offer. Mike, K6STU
P.S. MY phone number during the day at work is 213-2268921. My home phone is
818-8937455 . You can call me tonight at home but after that I would prefer
that you call me at work.

Source record: 107246

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or komudo@feist.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section, 0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section. 0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

Two 120volt primary 2200volt secondary xmfrs on the same core. I ran them in series for 240 in to get 4400 out. Rated at somewhere around a few amps. This is one big hunk of old iron. Must weigh at least 120 pounds and stands around a foot or more high. Shipping not an option--just too heavy to move easily.

$100.00. Pick up in San Diego.

850 386-2560 FAX
RH3333@aol.com

I currently have over 150,000 new tubes in stock including Transmitting, Receiving, Audio, TV, Antique, Ceramic.

I do not have a Web Site nor a price list. Suggest that you Email/FAX a list of the tubes that you are looking for as well as a quanity of each needed. I will check my inventory and advise you of current availibility and cost.

Also have a good supply of tube tester, tube caddies, and used tube equipment.

Thank you for your interest.

Source record: 107109
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have a complete PRC-47 set that has been given the LSB modification to work on the Amateur bands. It covers 2-10 Mhz, so covers 40 and 80 meters. Comes with (all original and in VERY GOOD shape) whip antenna, dipole antenna, stand, ground plane, headset/mike, instruction manual and power cable. All you need are 2 car batteries (I'll throw 2 new ones in if you pick it up in Dallas) to provide 28 volts DC.

Works great! Really great for setting up in the field or for taking to the weekend house.

Neat and clean unit. Dimentions are approximately 1 foot tall, 8 inches wide and 20 inches long.

These were used as HF rigs in Korea and Viet Nam. Typically mounted on a Jeep, or lugged around by a Marine.

Will sell for $300 OBO. You pay shipping from Dallas.

electronic mail to gkitto @ pobox.com (remove spaces to avoid spammers).
Or Call 972 - 383 - 7507.

389. Re: Central Electronics Transmitter value??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-08 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <352BB2C5.F61EF25F@calweb.com>
Source record: 107111

Condition is a factor, but if the final tubes (if they are Tung Sol 6550As) will bring at least 100 dollars for a pair from the audio tube dudes if they check good on a TV7 tube tester, maybe even more. Not that I would ever consider junking out a 100v as they are probably one of the most georgeous looking radios ever built not to mention the cutting edge engineering they represented. If it has a good front panel and all band pass couplers are functional, the unit should bring at least 350 in my book. But what do I know about these things although I've been using one of these rascals since 1962 and would not part with it (well everything has a price) heh!

What you're looking for is an XC-100P. I've seen two of them pop up on the
net in the past couple of years. I grabbed the first one, so there should
be at least one more out there somewhere. :)

Good luck.

Source record: 107117
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a small supply of PJ068 phone plugs (Collins, Drake). These are in good used condition. Some still have wires connected to the lugs and need desoldering. They aren't shined up, but they will shine up with a little elbow grease. $3.00 each plus postage, minimum order of five. If you need these plugs, don't wait.

Also, I have a new supply of 1/4 inch J55 plugs as used on CW keys and headsets. These are new old stock, 10 for $5.00 plus postage. Very limited supply. Solid brass and the best ever made.

Last, I have ten NOS US Army Signal Corps MC-385-C, high to low impedance headset transformers. This is a small audio xmfr enclosed in a small box. The box has a 1/4 inch plug sticking out of one side and a 1/4 inch jack on the other. You simply stick it into your vintage rcvr hi-Z
headset jack and then plug your low-z headset into the device. I have not seen any of these in a long time. $6.00 each plus postage, minimum order of 2. These are still in the box.

Thanks

Dan

Date: 1998-04-08 00:00:00 UTC
From: la8ak@krsand.no
Message-ID: <352bed5b.19044085@news.sol.no>
Source record: 107124

Several of my old receivers has bad chassis surface. The Drake 2-B's
becomes rusty through the copper surface, and the old Hammarlund
Super-Pro is rather oxyded.
Vaselin or retinax seems to stop oxydation and make surface better to
touch, but I wonder if some other finish is more ideal?
Any suggestions

If you qualify it to be the quintessential Hammarlund ham band only, SSB-capable receiver of the late 50's to 60's, tube type, I'd say yes. I really like the HQ-170 -- fine receiver overall considering its price point, terrific SSB audio, looks great. I think the HQ-180 is a better receiver with respect to some design fine points, and its also general coverage, but the differences are pretty small.

Both the 170 and 180 used identical IF strips past the 1st IF (the HQ-180 has a fixed crystal filter in the 1st IF, the 170 does not). Both were available in several variants. The HQ-170A-VHF provides better 6 meter performance than the standard version and includes a nuvistor converter for 2 meters, too. Certainly the longevity of both radios says something about their popularity and cost/performance -- the HQ-170 was produced for 10 years ('58-'67), the HQ-180 for 14 ('59-'72).

The solid state HQ-215, produced in the late 60's, may be a better receiver in some respects (I've never used one or even seen one other than in pictures) such as stability, filtering, etc. But who'd want a solid state receiver anyway :-) I think the HQ-180A actually outlived it from a production standpoint, so it may not have been such a great radio.

In order to produce X-Rays, a certain threshold energy is required. This energy level is not reached until the anode voltage hits approximately 10kV. Therefore, no X-Rays are produced below this level.

421. hq160 need help pls

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-08 00:00:00 UTC
From: kyw1060@aol.com
Message-ID: <1998040801492400.VAA10686@ladder01.news.aol.com>
Source record: 107194

My Hq160 is having some problems. I have worked on this bugger for many hours and have re-aligned IAW owners manual
My problem is I can not receive radio signals on the 18-31Mhz band. Hooked up Sig. Gen. and can hear the tone it is generating on 18Mhz and the other end of 30 Mhz. Checked band switch everything ok. Any suggestions please.
Problem#2 S-Meter works when it wants to. Cleaned pots and checked on VOM These look like originals. 1st pot measured 475 ohms 2nd one closest to radio front measured 1.750 ohms. everything is in order...right!
Would appreciate anyone helping me out.
Looking for HQ180. Thank You..very much
Mike in Delaware

422. Need HT-9 Coils or Info

426. FS GE MPA System Portable

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-08 00:00:00 UTC
From: dsrighello@aol.com
Message-ID: <1998040803122000.XAA00249@ladder03.news.aol.com>
Source record: 107199

I have a MPA system portable with speaker mic leather carrining case extra battery and a charger. This is a PAHAC3. It can be programmed to run AEGIS digital or encrypted. Its for a pro probably not something the average Ham would want or need. It can handle 192 channels in 16 modes. You can program telephone numbers for autodile or use the keyboard to send at your own rate. Dialing rate and pause features are programmable.

This is a top of the line GE portable which can be run over by a truck and not break it is solid aluminum casting. Many police use them to subdue criminals by slamming them in the head with the unit. Then they dont have to fill out a report that they used excessive force with the batton.

Has emergency button which produces GE STAR id when activated. Will produce GE Star standard Id so dispatcher knows who is keying on the system.

If you are serious about this Top Of The Line Portable, contact me ASAP I have sold plenty of MPA's and they go fast. Most of them to officers who want an extra really rugged unit.

Want to talk business? Contact me soon.

Source record: 107200

I have a Yaesu FT-757GX transceiver with a MFJ mobile tuner and mounting bracket to go in the front seat of your pickup or sedan. The unit works very well and will put out 100 watts. The only problem is the Keyer crapped out a few years ago and now I use a MFJ Econo Keyer to key the unit.

Im looking for a smaller unit to mount into the dash on my new Pick Up truck other wise I would not be selling it. Its a good spare HF rig too but I already have two spare rigs beyone my Ten-Tec Paragon.

If you would like to discuss purchasing this rig cantact me and we can discuss the price and shipping terms.

Don in Sacramento, CA

428. FS GE Microphones for CHP LB Rangr Mobiles

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-08 00:00:00 UTC
From: dsrighello@aol.com
Message-ID: <1998040805470501.BAA21013@ladder01.news.aol.com>
Source record: 107201

These are custom build microphones built by Sure for General Electric Mobile Communications to function with the S_800 series Control heads.

They are large palm style very rugged coil cords with DB-9 connectors to mate to the S-810 and S-815. They will also work with the S-825 Control head by making some changes to the pinouts.

These mics were designed to work with a half duplex system so the officer could press the PTT bar at the top and talk car to car and press the PTT bar and to bottom and talk to the dispatch.

They are excellent micophones for mobile applications and could be used with many different Ge mobile radios.

They sold for $ 145.00 are in Factory origional packaging and are ready to ship to anyone who is willing to pay $ 10.00 plus a small UPS shipping charge. If you are interested in large quantities I can bulk pack them and price them accordingly by lots of 10 or more.

You won't find a better mic for rough and tough mobile applications. If the CHP cant destroy them then you know they have to be well built.

If your interested in singles or multiple purchases please contact me soon. I do not want to store them much longer and am anxious to unload them.

Regards
Don W6PJJ

Yes

> [Can] the amplifier could be bypassed? What is the impedance and >output
> level of the unamplified element?

It is easy to bypass, and obvious how to do it once you open up the base of the mic. The native element is high impedance and WILL NOT WORK directly with most modern rigs, although boatanchors love it. I think the spec is 40K ohms.

There is really no need to bypass the preamp. It does not screw up the audio as long as you don't behave badly and turn the gain all the way up :-) And it ensures the element is properly terminated no matter what you hook the mic up to. So while you might have an aesthetic desire to use the mic without the preamp, the advantage of leaving the preamp in is that the output is stiff enough to drive either low or high impedance loads.

Older unamplified "G" Stands are plentiful, too.

435. A job well done! Rig (FT-101) Repair

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-09 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <6gimub$786$1@nnrp1.dejanews.com>
Source record: 107058
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.cb

I found a repair facility which repairs and restores radio
equipment! I was impressed with their web page and the
approach of restoring radios, not just repairing them.
It appeared to be more than just a repair shop.

I sent my FT-101F to Sandhills Technical Service Inc in
Candor, NC for repair (speech processor) and an alignment.
Their web page is: http://www.janrix.com/sts

STS seems to stockpile equipment so finding original parts
is easier (and cheaper) than the factory- especially with
the FT-101 series of the early 70's. My FT-101 was not a
new "face" to them. They have worked on many...

Larry, N4KVP did an EXCELLENT job in repairing, cleaning,
and aligning my rig. I had a fax with the costs and prices
before work was performed. The rig was back to me a few days
after I gave the go ahead. The only surprise was how well the
radio looked and performed. I asked to have him clean the rig
while they had it, and yes, it is cleaner than I have EVER had
it. I called him back to get his "secret", because I collect
FT-101 equipment and want to apply the same techniques to the
rest of the station.

I just wanted to post this note because I have read many horror
stories about repair, costs, and lack or original parts. I will
be using STS in the future.

Best of 73,
Al, NW2M

PS: The radio Larry repaired is in the photo on my web page:

438. Unusual application for 6BE6/EK90

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-09 00:00:00 UTC
From: la8ak@krsand.no
Message-ID: <352cb5ca.70363319@news.online.no>
Source record: 107061
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

In Siemens 745E receiver a 6BE6 is applied as linear frequency doubler, it has 50kHz IF input (for the two lowest frequency ranges) this frequency is doubled to go into the second IF (100kHz).
50kHz is fed to grid 1, cathode is not decoupled, only 820 ohm resistor (2.4V voltage drop), grid 3 is grounded, screen grid voltage is 65V and anode voltage is 225V.
I suppose the missed decoupling of cathode plays a function here, but I think a common cathode 12AT7 with one grid to ground would function equally, output taken from the anodes (tied together). The latter may have unequal gain for either triode, I am not aware of 6BE6 being better.

Has anybody ever seen a similar application in another receiver?

Hi Lane OM,

Hey, that sounds like a nice 'pig! Even though I am not interested myself (tempting though), I will relate this: I have a friend who once had a PAIR of pole pigs driving his pair of 4-1000A's amp (DX on 20M, y'know...the 5 element widespaced 20M beam at 100 ft helped too). He had the pigs in a metal box with slanting cover, padlocked shut, mounted against the outside wall of the house, opposite the hamshack wall inside. High voltage was routed through the wall to the shack via large-diameter coax cable. He called it his "pig pen". But he was not happy with the line voltage regulation (it just sagged too much; he wanted a STIFF line). So, he complained to the power company. They installed a recording voltmeter on the line entrance to his house to see how much the voltage sagged. My friend went out one day, noted the voltage variations were not what he was expecting. So he opened the cover of the recording meter, and wiggled the pens a bit on that recorder, to give an "amplified" version of the line sag. The power company came back, looked at the chart, and installed a set of big, black, HEAVY wires all the way down the pole line from a large distribution transformer at the end of the street, to his main box at his house! All this at no cost to him whatsoever of course (those were the days...).

Just thought all you 'pig fans out there would appreciate that.

Pole pigs are sometimes available for free, if you know who and when and how to ask. Many of the serious Tesla coil builders use them for the primary excitation power for their coils. They run 240V in from a variac, and use 14.4 KV pig output through rotary spark gaps to excite the primary of the Tesla coil. 40-foot arcs, anyone? These boys make ham radio high-power plate supplies look trivial.
73,
Don, W6JL

I bought a 14.4KV / 5 KVA pig from the City of Austin about 8 years ago,
for around $175 if I remember right. I was surprised at how cheap it
was. I have since heard that many public utilities have stopped selling
them to private individuals for liability reasons, though.

Never got 40' out of my coil, best I ever got was about 7'. But one of
these days, when I rewind my secondary with 12-gauge... :-)

This is no surprise to me..... Larry is a first class guy. I bought a used 2m mobile rig from him off the net two weeks ago. I had previously sent him my TS-830S for a re-tube and check out and he did a great job. Glad he's getting some notice here..... What impressed me was that I have called him several times by phone for tips and advice as well as asking numerous questions over the past year while learning more about rigs and repair. He has always taken time to reply to my emails and speak with me on the phone and has been very helpful.... a real "Elmer"... something that seems to be a dying art these days. I know he's going to have a booth at Dayton....look him up.

I agree 100%. I also sent my FT-101E to Larry Tucker at SandHills and he was more helpful than anyone else I have ever dealt with. I specially liked the full progress reports he sent me while the radio was being worked. He also saved me some $$ on parts he had on hand and I didn't have to get from other sources. If I remember correctly you Al, was the one who gave me his e-mail address. This is not a paid commercial ad, it is just a very satisfied customer.

Thanks Larry.

Thanks Al.

Well.. not quite that much power is necessary. About 100 KVA does the trick on an efficient system. If you want to see what the current state of the art is, check out:

http://www.lod.org/electrum/electrumpics.html

The spherical electrode at the top is 7 feet in diameter. The creator of the coil, Greg Leyh, is INSIDE the shere taking current measurements. How's that for believing in a Faraday Cage? :^)

Greg - to get a ballpark figure on thevalue of these radios, you will need to consult the Boneyard Bluebook at:

http://www.mnsinc.com/bry/ham/boneyard.htm

There you will find a RANGE of prices that were asked for R-390 and R-390A radios. I think it may help you.

...Believe they were made by RCA, not National. 1. Had a buddy who built them there; 2. I own one. They are an excellent receiver. Fair Radio has/had the sub-min tubes they use. Only recurring problem is AC line bypass capacitors short, making the cabinet "hot". If you put a ground on the monster, & the line fuze blows, that's the problem.

>Paul

I'd think that it would work fine.
National Radio Co recommended the 6JB6 as a replacement
for the 6GJ5 in the NCX-3 and NCX-5 transceivers.
One had to remove a couple of wires from the pin on the socket
used for the supressor pin when using 6JB6's as National had
originally used that pin for a tie point due to the internal supressor
connections of the 6GJ5. I'd check your socket wiring to make
sure that Drake didn't do something similar.

Doug

Last chance on the amp. Important visitors next week- it's got to be
out of my office. It pains me to throw good equipment in the dumpster!
If interested, you should call now...

Free: 100+ Watt output Motorola 150MHz tetrode amplifier (includes one
8560AS) and power supply. Rack mount, not huge, should be working.
Schematic not available.

Pick-up only in Downtown St. Louis, MO, between 8am and 3pm, Monday
through Friday, except holidays. Call me for directions.

Take it my way, and it's free.
If you ask about a schematic, add $20.
If you ask me what kind of tube it runs, add $20.
If you ask me if it works, add $20.
If you ask what days or times you can pick it up, add $20.
If you want it delivered locally, add $100.
If you ask me to ship it, add $200.

You might try "Fair Radio Sales", Lima OH, Phone # (419)223-2196

I see a 60 and 400 Hz meter in their catalog for $9.95. It's only a 2
inch size though.
But they have tons of stuff in their warehouse that isnt in the catalog,
so if you call
them they can probably find one for you.

478. knob inserts needed for SB-614 Heathkit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-10 00:00:00 UTC
From: terrybu@netman.ens.tek.com
Message-ID: <6glh9a$85a@netman.ens.tek.com>
Source record: 106957

Some time ago I picked up a partially done SB-614 signal monitor scope kit and have got down to the last couple of pages in completing it. I have managed to come up with the few missing parts but now I find the inserts for the knobs and some brass spring clips for the inner knobs are missing. Would anyone have these or the complete knobs. They evidently are a common Heathkit knob arrangement so are probably not too hard to find.

Hallicrafters S-40B. It appears completely original, though there is some sort of small centered decal that appears to be missing from the face. Everything appears to work, but the audio is so low it may only be heard on headphones at the moment. All of the tubes, original knobs, etc. are present. The cabinet is dusty and faded some with some scuffing and surface rust on the hinge and scuffed spots. Spring shack cleaning - asking $75. O.B.O. plus actual shipping. 73, DavidC AA1FA

Source record: 106968

An old friend in Erlanger, Kentucky, has had a stroke and is selling off a bunch of stuff. Please call him if you're interested in anything listed and make him an offer. His name is Bill Stewert, and his number is 606-341-4498.

5" Jackson scope, '60s vintage, used maybe three times. As new.
Jackson transistor tester, same vintage, also barely used.
Jackson Televolter (Jackson's name for a VTVM), 6" scale, as new.
Two Jackson 648 series tube testers, one from the '60s and one from the '70s.

About 200 tubes, both radio and TV

Umpteen miscellaneous parts, mostly '60s/'70s transistor set stuff.

Please don't lowball him, guys. He's a wonderful guy who I've known for 25 years and is in bad shape.

Thanks...Avery W4OGK

490. Another Mercury-Vapor Rect. Qst.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-10 00:00:00 UTC
From: adicker113@aol.com
Message-ID: <1998041021231200.RAA16009@ladder01.news.aol.com>
Source record: 106969

Thanks to all who answered my earlier question!
Now I have a new one:

How do mercury vapor tubes (specifically 866A and 8008) react to surges.
All the transmitters Ive ever worked on used solid state rectifer stacks.
So what happens to these tubes when a power amp tube goes bad and shorts or
arcs?

Is there any chance of them shooting glass and mercury everywhere?

Thanks again
Alan

The following was circulated about 10 days ago. Approximately 60 percent of the tubes have been sold; however, the remainder is still available. Give Mr Anthony a call and load up on "old parts"...
Thanks!
Howard weeks

"Radio / TV Repair Shop Parts for Sale

Anthony's Radio and TV Repair, located in Augusta, GA since 1951, is closing due to the owner's retirement. The modern equipment and parts have been sold; however, there are approximately 120 lineal feet of 6 foot high shelves loaded with new and used old stock parts available. There are in excess of 5000 tubes of which about 75 percent are new old stock in the boxes. The rest are used tubes in marked boxes. Based on one quick look, I would estimate that about 85-90 percent are TV oriented tubes. The rest are 6 and 12 volt, etc. There are probably 40 or more lineal feet of shelves with new old TV parts and assemblies. There are about 20 or more feet of components such as resistors, capacitors, etc. There are over 100 power transformers (used) that are "pulls" from old television sets. The rafters are covered with small transformers and filters of all types. There are no old radios or TVs available. There are a few pieces of old test equipment. I saw two old B&K Analyst sets and one other that was some kind of signal generator.
The owner, Ed Anthony, is interested in selling all or part of it. He will take telephone calls between the hours of 12 noon until 9 PM Eastern Standard Time. His telephone number is 706-863-4269. He has a detailed inventory but it is on "many" pages of paper so is not available via the net. He does not have email access. Should anyone have an interest in this rather large truck load of parts, please give him a call. I do not know what he wants ($) for it. I will answer email questions on it for him - but only to the extent that I know it. I have had only one quick look and I have repeated (above) about all I know about it. Thanks for reading!"

Source record: 106980
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Will trade this for Collins gear or sell for $850.00

Full output 3 tube Alpha 374. Runs (3) 8874 triodes. 1500 watt ouput +++ no problem. Bandswitch is 4 sections. One of the sections needs a replacement nylon (I'd use teflon) insulator. Causes arcing on the higher bands 20 meters and up. Cosmetically in excellent shape. Internally super nice. If you don't mind spending about 3 or 4 hours unsoldering two sections of the four section switch and replacing the nylon insulator then it is a great deal for a technician type. I have other projects and too many amps already.

Built like a Sherman tank. Built like the USS New Jersey. Built like Fort Knox. Built like.....well you get the idea.

Will trade for Collins gear or sell outright for $850.00.

You cover shipping from San Diego zip 92139. Not cheap. this thing weighs a ton.

Happy Easter!!!!!!!

Source record: 107089

Well, my buddy decided I should pay him $25. One of his friends said it might be worth as much as$200 if he found a collector, but he doesn't want to find a collector - he thought I should have it. I guess because I'm brand new the to hobby (amateur radio) and have a disdain for the CB like quality of some VHF and UHF bands and folk.

He got the radio out, checked that it worked, and I got it today. The case is a little beat up, nothing to look at. The tag's missing from the front. But it looks like I have a HF receiver that will last me the rest of my days!

It turned out to be a 390A and he gave me the original Army manual along with his notes on how to set it up for each band.

Greg

Yes indeed... but you need a transformer somewhere on the order of
500kw to make arcs that big... oh well. The utility company here does
not sell the pigs with PCB oil in them to the public anymore, because
of stupid enviromental laws and disposal regulations. I can get them
for educational use, though. Will start work on my first *big* coil in
a few days... should be fun!

The Electron Tubes Online shopping (ETOLS)
http://www.halfin.com/shop
Halfin's web site has been completely reviewed.
The ETOLS online shop has been redesigned to offer you a better utilisation comfort.
Now, the shop contains more then 500 types including the 300B from Western Electric
and each week, new items will be added.
The Etols team is working to provide you with online information about tubes presented.

ETOLS is the first Electron Tubes Online Shopping facility on the Internet offering direct buying with Visa and/or MasterCard.
http://www.halfin.com/shop/index.htm

Further to our survey, it appeared that most of you found the minimum order amount of 100$ too high. That's why we have reduced it in order to comply with your request.

ETOLS is not just a shop. We would like that this site to become a real center of reference for tube lovers. This project can only develop with your participation. The members area provides many links to interesting Web sites containing Data Sheets, technical informations, useful software, fonts, symbols and advise to everyone from beginners to experienced users.

Our links page is fully interactive and you're kindly invited to enter your web site if it is related to electron tubes.

Our guestbook is now automatically updated with your input.
Don't hesitate to give us your appreciation.

The members subscribtion is totaly FREE and any tubes lover opinion will be appreciated.

[[-BK

WOW! What a thought! 50 or 500 kW in the garage - a long mic cable out to the yard, and a Margarita with you in the hammock on a warm summer evening.

You could blank out all of the summer QRN, the slop buckets and foreign BCers, and totally RULE on 3880 (grin!)

We could move it around from time to time, to various shacks like a hidden "shell game" piece and keep the Furry Crazy Campers guessing for years!

Hello Alan,

You wrote:

>How do mercury vapor tubes (specifically 866A and 8008) react to surges.
>All the transmitters Ive ever worked on used solid state rectifer stacks.
>So what happens to these tubes when a power amp tube goes bad and shorts or
>arcs?
>
>Is there any chance of them shooting glass and mercury everywhere?
>
It's always a good idea to have appropriate fusing on any power supply. I've had a little experience with MV power supply troubles, and never had a tube explode - the fuse always blew first.

Here are several considerations for the use of mercury vapor rectifiers:

1) Adequate fusing - this means the plate transformer should have its own fuse, rather than depending on a fuse for the whole rig.

2) Warm-up time - the filaments should be lit at least 60 seconds before applying the high voltage. I use a thermal time delay relay with a stick type repeater circuit (it was in QST's Hints and Kinks a few years ago) so that the time delay cannot be defeated. If the mercury pool is disturbed, the tubes should be run with heater voltage alone for at least 10 minutes to boil off any mercury that got on the tube elements.

3) Peak current limiting - In practical terms, choke input filtering is almost mandatory with MV rectifiers. The input choke should have at least critical inductance, which for 60 Hz supply and full wave rectification is L(henries) = Load resistance (kilohms).

4) Filament Voltage - Needs to be within a few percent of the correct value. This means really heavy heater wire - a pair of '66s draw 10 amps, and at 2.5 volts you don't have room for much voltage drop.

5) Keep the tubes vertical at all times unless absolutely necessary. They will not work in any position other than base down.

Have been using a pair of 866As in the power supplies for my homebrew HF rigs since 1980 or so and am only on my second pair of tubes. Used the rig on Field Day several times (most recently in 1995).

Feel free to email for more info.

Dear All,
I am putting together some parts to make a harness for aligning RA17s, I have just done mine using croc clips and a soldering iron and found it very fiddly so I've decided to make up some leads specifically for each operation as I am going to keep the set and I have to do my father's at some stage.

I am after:
a) Some burndept plugs for the 100 kHz outlets
b) Some of the small coax plugs used to connect to the various 1 MHz etc outlets.

With a bit of luck I can then make up some leads that are correctly shunted etc as the manual requires.

Regards

Robin

PS, although my attempts at aligning have improved things immensly if anybody has any advice or common faults to look out for then I would be glad of any advice.

Regards

Robin

562. RME part Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-11 00:00:00 UTC
From: k5vmu@lunatic.com
Message-ID: <9870.689.uupcb@lunatic.com>
Source record: 107017

John asked about aplication background for a "strayed bit of history"-

No- An audio phase shift network is not a product detector.

Audio Phase Shift networks accepted a single input of audio stimuli and
provided two outputs of equal amplitude but differing in phase by 90 deg
over a fairly broad frequency band. Using passive componts they were limited
in the range of frequenies over which the shift would appear to be 90 deg
but could be used (very sucesfuly) in the "phasing method" of SSB signal
generation. Many felt that the signals produced with that techniqe sounded
better than those generated by the "brute force filtering" approach. Phasing
generation of the SSB rf could result in excelent supresion of the opposite
side band although not as good as achived with filtering and had excelent
supresion of the rf-carrier component. An excelent approach which was not
employed often was to use a pahsing exciter feeding a fiter! Once the cost
of filters dropped below the cost of precsion audio phase shifters which
were essential "ballanced bridge" circuits dependent on very precise componet
values in all legs of the bridge and controlled impedance of the bridge
input and output source and load, the cost of phase shift exciters doomed
them. They could be home-brewed by hams with time and a little simple test
equipment..They were not cheap when componets such as your RME part were
bought and filter based exciters were easy to manufacture...I guess most
early SSB home-brew exciters were phasing based, and most manufactured units
have always been based on filtering of the undesirfed sideband after the
exciter generates a DSB signal.

I have a nice 51S1 that I would consider trading for one of the
following items...

-Modern HF XCVR ..... 940.....761 or the like

-75A4

-Good legal limit amplifier

The 51S1 does not have a Collins cabinet. It presently resides in a
Heathkit cabinet that has been painted grey. (the cabinet is ugly but
works til I find one from a KWM2 or 30L1) Also has a Heath speaker.

Unit works fine and comes with copy of the manual.

I was a Candian Department of National Defense unit and has a small
tag (abt 1" square) on the front.

I am not interested in selling this unit.....ONLY TRADES PLEASE.

For Sale or Trade:

Restorable Drake 1-A, serial number 17. This set is complete, but needs restoration. The cabinet will need repainted, two non-original small knobs have been added to the lower front panel, and the panel itself will need touch-up painting. I do have the original manual to go with the set. I have not tested the set electrically, but can do so upon request.

I'd prefer to swap for other Drake gear for my collection, for Boatanchor receivers I don't or haven't owned, or for U.S. currency. :-) Best offer sale or trade.

Thanks for the read!

73,

Tony N8SNC

According to my RCA transmitting tube manual the 842 is triode that was used as a class A amplifier, modulator. It has a plate dissipation of 12w with aplate voltage of 425v. It has direct heated filament running at 7.5v /1.25a. Pin connections are: 1,4-filament, 3-grid, 2-plate. Hope this helps.

For the information of all hands:

The third annual MRCG will be holding its meet at the historical Camp San Luis Obispo, CA (which is midway on the coast between LA and SF, about 130 miles south of Monterey). Meeting may start about 0700 hours that Saturday with with a dedicated military hamfests (mostly parts, military units from WW2 and so on), followed by the conventional scheduled meeting. Lunch may be available via local catering or one may forage at many of the fine restaurants in San Luis Obispo, CA or the surrounding cities of Morro Bay, Los Osos, Atascadero, or wherever. Camping is available at (no pun intended) Camp San Luis Obispo. Exchange services are also available to card carrying members of the Armed Services (reserve, active, or retired). Hotel accomodations are also available throughout the area at reasonable fees. For futhur information, you can contact me at this address. Thanks to all.

587. Fused Plug-Source

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-12 00:00:00 UTC
From: Bill - <BILLJD@mcleodusa.net>
Message-ID: <3530EF48.46C6@mcleodusa.net>
Source record: 106909

As a point of information for those who need a fused plug as used on the DX-100 or Johnson Ranger, here is a possible source:

I obtained a fused plug for my DX100 from a farm store here in IA called Fleetway, in Wis they are called Farm & Fleet, same type of stock. Any place that handles parts for electric fencing etc. should have them. Mine is labeled "FarmWorks, part #07063-92. Exact dup to Ranger or DX-100 double-fused plug. The plug has the logo "DARE 1624" stamped on it, so guess they make it. Got mine just a few months back.
They list a no 507-288-7777 on the back of the FarmWorks package for questions. Perhaps u can find who stocks them out your way.

600. Trade: Sylvania Manual HF Rcvr (ESM)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-12 00:00:00 UTC
From: provero@connix.com
Message-ID: <6gp59p$pch@beast.connix.com>
Source record: 107040
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

The "pile o' projects" is getting out of hand, offering this
for another receiver, BA or modern, to play with.....

Sylvania HF Manual Receiver, usually referred to as R-1451, part
of the WLR-6 ESM suite. This one doesn't have the model number,
but says "HF Manual Receiver, Part of Water Boy 1 System" and
is serial number 4.

0.5 to 32 MHZ in 6 bands, nixie digital readout to 0.1 KHz,
has AFC to lock on any 100 Hz multiple. Supports AM, SSB/CW,
and ISB. Single conversion from 0.5 to 8 MHz, double conversion
from 8-32 MHz. Has same bandwidth settings as R-390/390A -- 16,
8, 4, 2, 1 and 0.1 KHz. Uses dual 3.0 KHz mechanical filters in the
ISB module, and Clevite ceramic filters for the 16, 8, 4, and 2 KHz
bandwidths.

Problems: The radio is very hard of hearing on the 8-16 and 16-32
ranges. The upper sideband part of ISB is out. Don't have a
manual, just some sketchy extracts.

If anyone has a Heath AA-18, please check to see where the wire from
Point C on the circuit board is supposed to go. Mine has that wire
sort of floating in space.

Thanks in advance,
Jeff KH2PZ

606. FS/FT Central Electronics 200V and National NC-183D w/ Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-12 00:00:00 UTC
From: Hal Waite <halwaite@sprintmail.com>
Message-ID: <35306687.5C3A@sprintmail.com>
Source record: 107046

I am in the process of divesting myself of some of my boatanchor collection. The CE 200V is absolutely spotless and is as new. This elegant gear shows better-than-Collins quality of construction and is a true classic. Drove 300 miles to pick this one up years ago. $595

The National is also spotless; the original speaker has only a slight discoloration of the grill cloth (hardly noticeable). Like new without a scratch. $495

These prices are high because the units are true collector quality. No shipping to avoid damaging these pristine pieces of gear. Pickup in Las Vegas or will be available at the Chino (formerly Pomona DeVry hamfest) in the LA area or perhaps at TRW (not preferred).

These are available for trade towards a Kenwood TS-850S in mint condition or other interesting later equipment.

SOME TIME LATER, the following will be available:

Beautiful Hallicrafters HT-32B and SX-115 combination. One of the finest boatanchor receivers and transmiters ever built in original condition.

Swan (Cubic Corporation) Astro 103B with matching amplifier in like-new condition with Owner's manual and Service Manual. Solid state but a true classic with passband tuning, CW filter, etc. Outstanding audio.

Hallicrafters SR-2000 desktop kilowatt station in excellent condition with the usual marks on the poor paint which is characteristic of this era of Hallicrafters.

Hallicrafters SX-28 in beautiful original condition with original manual. Minor marks but the nicest one that I have ever seen.

Complete Drake C-Line with Sherwood mods and AM filter in near-new condition,

and other less interesting equipment.

73, Hal K3AB/7 Las Vegas

Cross-posted to: rec.radio.amateur.boatanchors,rec.ham-radio.packet,rec.ham-radio,rec.radio.amateur.equipment,rec.ham-radio.swap,rec.radio.amateur.policy,

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and

enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94 about W5VVI. If you think this guy is benign, think again. What's going on right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

I have for sale a Heath HD-1410 electronic keyer in good condition.
Schematic included.
I have added a reed relay that is keyed to provide a keying source with
a hard ground that some older tube type transmitters require. The
original letters have rubbed off the front panel. This unit runs on
12vdc or 110vac. The headphone jack on the rear panel is now wired to
accept a padel unit such as a bencher. $50 or best offer. split
shipping

Source record: 106862

I am about to delve into my Drake AC-4 power supply, to replace the several can type filter caps, and have found a source of NOS 'lytics (from Surplus of NE). I've found exact replacements at an honest price, but I have so often heard the mantra that old electros are badbadbad. For convenience and aesthetics sake, I would like to use these, but the most important issue is will they work to spec, and for how long?

Will

Another poster gave you some good hints....
I can only add that the 872A's in my T.M.C. GPT-750 xmtr
would occasionally arc or short if badly overloaded.
This rarely caused permanent damage to anything,
although I've seen sections of the cathode blown off the
tube (it sill worked!!). The really interesting phenomena,
is when an 872A arched, the high current spike would be so
high in current and so fast a rise time that the main house breaker
would react before the individual 20 amp breaker for the xmtr's 240V
circuit. Changing the 20amp breaker made no difference. More than
once, the whole house went dark. (GRIN). But then, an 872A is
capable of 1 amp at 10,000 volts output...

Message-ID: <6gt6c1$okf@sf18.dseg.ti.com>
Source record: 106942
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For sale:

Drake 2-B receiver with 2-BQ speaker/Q-multiplier, 2-AC 100 KHz crystal calibrator, and operator's manual. Clean and working, no modifications or "hack job" repairs, super-nice front panels and only minor wear on cabinets. This is one of the nicest 2-B setups that I've ever seen. It is not a "museum piece". I use it regularly (like 2 or 3 times a week). I kinda hate to part with it, but I got a good deal on a fully-loaded R-4C receiver that will suit my needs a little better.

The price is $250.00 plus actual UPS shipping charges. Due to the myriad of stupid international laws, I am not willing to ship outside the United States (just to darned much hassle!).

I assume you mean you want the FEMALE end to connect to the Male Chassis mount. I think I have several. Also diagram for jumpering, or do you have that?

Just got paroled from local hospital, but in a few days might be able to help you, if nobody else has come forward.

BTW, a local ham in your situation, simply soldered a linecord to the proper terminals, completed the jumpering in a similar manner, and though it looks a mite messy, wrapped with the black tape, he uses it every field day with no problems.

Sunbelt Hamfest is available for you to post your equipment for sale or trade. I started this site being a Amateur who likes a good hamfest, yet confined to a wheelchair makes it hard to get to them. I knew there were others like myself who enjoy a good hamfest. You can help this site grow.

Just email your listing to gws@surfsouth.com and we will include your listing at [NO COST] . We can include a picture of the equipment if you have one.

We need your listings to help us interest vendors in our site as well as provide plenty of listings for Amateurs to enjoy.

Help us make this the best online hamfest !

Tell your friends and club members. Include a banner on the personal or club page.

I look forward to hearing from you.

Hi Web,

>Does anyone know of a website with a photo of these,

http://www.geocities.com/siliconvalley/park/3286/599.html

Be patient, geocities has been slow lately.

> Or, I have an extensive set of old QST's, and
>if someone could point me in the direction of what year these sets were
>produced (or advertised in QST) I could see for myself what I'm >getting.

1965-70 or so. There are number of ads in the older Handbooks as well.

>Does the 2m converter allow 2m transmit?

No, it is a receive converter only that if not already installed, requires a
but more than plug-in. A few wires to solder is all

All in All Web, a great pair that I think you will enjoy. If you have the
desire to work some AM, try this rig, it sounds very good. Many of the OT
High Level plate modulation guys are impressed with the overall quality of
the AM. Sounds equally good on SSB.

Hi,
I've got a very good condition electrically and cosmetically HQ129X. I would like to swap for another radio such as an HQ180 or HQ100AC. If you have something else that is a good general coverage swap let me know. Will add cash plus HQ129X for the right radio. Maybe an SX28A ;).
Jpeg avaliable.
HQ129X with repro manual in hardcover ring binder included.
73's
Jack/ in Northern Calif.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 19th, 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all

sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

:
:*Any* vacuum tube operated with high voltage on it generates X rays,
:regardless of being a rectifier, modulator or RF amplifier. The
:presence of mercury makes no difference. Xrays are generated when
:electrons slam into the anode (plate) of the tube.

The presense of mercury can affect the production of
X - rays. In vacuum tubes the electrons hitting the
anode have a kinetic energy of the potential difference
between the anode and the catode (10 kV potential
difference equals to max. 10 keV energy for the x-rays).
In a gas-filled tube the collisions between the electrons and
the gas (Hg vapor) atoms keep the kinetic energy of the
electrons at a level much below the full anode - catode
potential difference ---> much less energetic x-rays are
produced at the anode.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium/K6 computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $225

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $225

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $225.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $225

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that
was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50 OBO

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head (all solid state). High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. several $5 each.

A friend of mine Jack, W2EHD is offering the following bug for sale -- please contact him directly. This text is clipped directly from his email note to me:

I have a Vibroplex bug - Chrome base, red plastic paddles, jeweled pivots, I think. Model unknown but the serial number is 166975.

It has no "papers," unfortunately, but all the parts - with the exception of one of the three weights - are original. I added the third weight because the blasted thing was too fast!

The bug was a legacy of a one of the radiomen aboard the USS Putnam DD-757 - who was transferred away and left it behind. It was around 1957, when one of the other Radiomen gave it to me - since I could use it - and the Navy officially allowed only straight keys.

Looking for $150.00. 73 Jack, W2EHD

email is 8284x@worldnet.att.net (John B. Meagher Jr.)

679. Re: NOS Can-type electrolytic caps

Newsgroup: rec.radio.amateur.boatanchors

From: n2ey@aol.com
Message-ID: <1998041412034501.IAA28719@ladder03.news.aol.com>
Source record: 106878

Hello Will,

I've found many NOS electrolytics that were perfectly good after decades on the shelf - and others that were complete duds. The trick is to test and re-form them before installation.

I built a simple tester\reformer using an old power transformer, a 1000 PIV diode, and a 0-30 mA meter. Also needed are a Variac and a multimeter.

MANDATORY SAFETY DISCLAIMER - Testing these things can be EXTREMELY DANGEROUS!! Not only are you dealing with potentially lethal voltages, but the devices being tested are capable of storing dangerous amounts of energy, even when the apparatus is turned off and disconnected. Old electrolytics have been known to explode under certain conditions. Use all necessary safety precautions at all times. You are permitted exactly zero mistakes.

Be careful - be gentle - take your time - double check everything - and be sure to observe polarity. Practice with a junkbox capacitor first.

The transformer and diode are set up as a simple halfwave rectifier. The transformer I use provides up to 600 volts of output, so almost any electrolytic can be tested. The rectifier output is connected to the capacitor under test, with the milliameter connected in series to measure charging/leakage current. The multimeter is connected across the capacitor under test, to read applied voltage. The whole works is plugged into the output of the Variac, which is initially set at zero output.

The test/reforming is done by slowly increasing the Variac output voltage, which in turn applies voltage to the capacitor under test. You can see the charging current on the milliameter - control the Variac so that the milliameter isn't pushed off-scale. The voltage is slowly increased as the charging current drops. It's easy once you get the feel for it. This process can take several minutes. A good capacitor may draw lots of current at first, but will form up and the current will drop. Be careful not to exceed the capacitor voltage rating. An open capacitor will draw little or no current, and a shorted one will draw large currents at low voltage.

If the capacitor survives reforming, the leakage current can then be measured by the milliameter. (Be sure to subtract the current drawn by the multimeter). I use a value of 5 milliamperes as the absolute maximum acceptable leakage.

The Variac is then set to zero and the discharge time of the capacitor through the multimeter is noted. It's easy to figure the approximate capacitance by using the RC time constant formula.

The above does not give any indication of the ESR (equivalent series resistance).

Hope this helps. Again - BE CAREFUL!

Eimac says that the "R" version is a "ruggedized tube designed for high shock and/or vibration environments". Additionally, the input and output capacitances are slightly different, but this shouldn't matter in HF applications. It is specifically intended for Class AB1 linear applications.

My experience with them is that they are a rugged, direct replacement for the 4CX250B.

We've come into a motherload of tubes, NOS and used/pulled. All need
new homes. We just don't have time/energy to send these out piecemeal,
so we'll entertain reasonable offers for each of three lots. Please
reply by email.

73
John Poulton KF4OZY jp@cs.unc.edu
Nick England KD4CPL nick@cs.unc.edu

==========
Lot 1: 12 304TL's. These were pulled from Varian electromagnets, where
they served as the control elements for the magnet power supply. All of
the tubes come with machined, heat-dissipating aluminum plate caps. Prefer
to sell as a lot, but will consider sending these out in pairs for a
reasonable offer.

Source record: 106890

The Hg vapor serves as a conduction medium...the HV breakdown is
regulated better than "vacuum". The x-ray genreated si the
characteristic of the anode material. Hg vapor has little to nothing to
do with the generation of the x-ray. Any chance collision with the vapor
will likely _NOT_ produce an x-ray. The metal components in the tube are
where the x-rays originate.

The original post queried whether or not 10kV would produce harmful
x-rays. In my opinion, potentials below 20-25 kVp do not produce
appreciable (i.e. measurable quantities of) x-rays. It is dependent upon
the anode and supporting metal structures, but the threshold is
greaterthan 10 kVp. At 10 kVp, x-ray generation is academic, not
hazardous.

Message-ID: <MPG.f9d938ab9ae5a1a9896c3@news.infoave.net>
Source record: 106901

I ordered one of these sets from a fellow ham in California, and am wondering what to expect from them. It's going to be a spare rig, so doesn't have to be top-notch, but I would kind of like to get an idea of what they will do. Does anyone know of a website with a photo of these, maybe including the specs? Or, I have an extensive set of old QST's, and if someone could point me in the direction of what year these sets were produced (or advertised in QST) I could see for myself what I'm getting. Does the 2m converter allow 2m transmit? It's by Kenwood, and is an optional accessory made for the rig- that's all I know about it. I think the fellow I'm getting it from took it on a trade, and hasn't operated it per se.

73 all, -Web kr4wm@bigfoot.com

Hi All..

I have stumbled upon a new-in-the-box FT101ZD (WARC).
This radio has never been plugged in and is still wraped in plastic.
I opened the box and looked at the radio..all manuals, power cable, warranty
cards etc. are there...

I have not decided if I will sell it or not, but am curious what it might
be worth today.. I know there are a lot of FT101 folks out there..someone must

have some idea...

Thanks for any information..

Hi Web.
I have copies of both operating manuels for the rx and tx available. The 2-mtr converter is a receiving converter only. There is also room in the rx for a 6-mtr receiving converter if you should obtain one. They cover 10,15,20,40,80 mtrs I don't remember if they cover 160-mtrs There is a pair of 6146's in the tx and they will give you about 100-125 watts out depending on what band your on.

Good luck and 73's de Mike, K6STU.

I Just wanted to thank eveyone who replied by email to this posting and
for the help obtaining a manual.

Thanks again,
Bob Sayers

Can anyone tell me where to get operation and or service manual for a
Hallicrafters SX-51, Ham Radio, it seems to be missing a tube, and also to
test this radio out, can I just hook any wire up to it as an antenna. I do
have a variable isolated AC supply to slowly bring the voltage up. Any
help much appreciated, Please email.

Thanks in advance,
Bob Sayers

I am looking for a Wholesale Radio Labs (later World Radio Labs) model 70 transmitter. This is a prewar unit. Anyone having one or who knows where one might be, please contact me via email. Someone may have one and not know what it is since I understand it did not have clear markings of identification. It used a 6L6 crystal oscillator and a pair of 6L6G's in the final.

Any information would be appreciated.

I have the following items For Sale:

Kenwood MC-85 Desk Mike - very good cosmetically but audio distorted.

Has 8 pin cable wired for TS-440S, and 4 pin cable. No manual

$50. plus shipping.

Autek QF-1A Active audio filter. Very good condition, works fine. No

manual.....$30. plus shipping.

Dentron Jr. Monitor compact antenna tuner. 160-10 meters coax, balanced

lines, random wires. 300 watt PEP rated with built-in balun and RF

meter. No manual. Works well. Face is in real good shape, but cabinet

cover could stand a fresh coat of paint. Great for mobile / field day.

$35 plus shipping....

Radio Shack 20/200/2000 watt power/swr meter. In perfect shape. No

manual......$25 plus shipping.

Ron,

"NOS" means "New, old stock". This term is used to describe parts
which are of old manufacture, but are unused (in original packaging,
if applicable). This is not to be confused with "NEW", which refers
to parts of current or recent manufacture, or reproduction parts for
restoration (and watch out for re-pops being palmed off as NOS!).

73,
Dean - K5DH

734. Drake Web Page Again

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-15 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <35349559.D4169C23@asu.uswest.net>
Source record: 106789

Will it ever end? That is a question many of us have been asking as we wait, and wait, and wait, for the replacement parts page to load. I have been all over the place with this. Emailed John Kelley at Drake, the sales staff there too. I get uncharacteristic (for Drake, for most customer 'service' people it is the norm) curtness, telling me that I am screwing the process up. No, I am not. To date, I have tried from home, using a 56K modem to a 56K .edu provider. No go. Changing memory parameters changes nothing. Occasionally, I have been able to load the whole page on campus, using a Pentium II 233 Mhz connected directly to a T1. Still slow, but it works. Now the damn thing only loads up to the T4-series section. Again I get the indifferent reply from Drake. I don't think they know what they are doing where web business is concerned. Just some guy who read a 'dummies' book on HTML, and there he goes. PLease, if anyone else is having problems like this, let Drake know by emailing John_Kelley@rldrake.com. Maybe I'm the only one. If so, I'll go eat some worms.

743. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6h1u4t$ho8@news.Hawaii.Edu>
Source record: 106798
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

From: Charlie Vaughn <cvaughn@netdepot.com>
Message-ID: <35348F36.81D453BB@netdepot.com>
Source record: 106801

I have a collector quality Johnson brochure, cat.no. 250-40 that I have had for many years that I am selling. This brochure is more like a detailed spec sheet and brochure, 24 pages of information on everything from a Viking Adventurer, to the 500 and everything in between. Think about it, buying a Johnson 500 for a low sum of $795.

The last page has all the keys Johnson sold. The Deluxe Semi-Automatic at $20.65 with a chrome base. Wow.

If you are interested in this brochure, write me at:

cvaughn2@yahoo.com

As I said, it's one of a kind.

Regards,

Charlie

748. Breting 9 Schematic/Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-15 00:00:00 UTC
From: Bill Smith <billsmith@jps.net>
Message-ID: <353541fc.0@blushng.jps.net>
Source record: 106803

Hi, a friend of mine has picked up an old Breting 9 receiver. It is in pretty rough condition, but is under restoration. He needs the following:

1. A schematic (can't find it in Riders), or a pointer to where one might get a drawing of the circuit.

2. A copy of the main dial. Apparently the dial is a piece of paper or cardboard that is sandwiched between two pieces of glass. Is there any way to get a copy?

3. Whoever had the receiver replaced the noise limiter control with an S-meter. In doing so, they cut the front label-panel in half. Is it possible to get a photocopy of this panel so he can make a new label-panel?

Thanks for your time. He is willing to pay for anyone's efforts who can help him.

73 de Bill, AB6MT

750. BC-779B/SP-200 Parts Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-15 00:00:00 UTC
From: Bill Smith <billsmith@jps.net>
Message-ID: <353545e7.0@blushng.jps.net>
Source record: 106805

Hi, I need the following for a Hammerlund BC-779-B, which is the military version of the SP-200 LX receiver:

Two small knobs with "doghouse pointers. I sold a bunch of these for a bargain at a swap meet..

.
/ \
| |

The large band-change knob with calibrated skirt:

100-200 kc
200-400 kc
2.5 - 5 mc
5 - 10 mc
10 - 20 mc

Also, I need the antenna and mute terminal strips. They are both two-screw strips which are mounted on a thick phenolic material, and appear to be peculiar to this receiver. I suspect someone was instructed to install a SO-239 in the antenna circuit, but removed the mute strip and installed the coax plug in the wrong location! It was then corrected with the SO-239 now at the antenna terminals (the mute location is now a big hole). I'd like to modify the set back to original.

Could you help?

Thank you!

Hello to all, I have a very very large knife switch, the ones that you see in the movies, when a guy is sentenced to die on an electric chair. This was made around the 1940's. The switch has a wooden handle, and the copper bars, etc are made out of solid copper. It looks like it can handle 200 amps at 120 volts AC. This is a musem piece. (not a good idea to try to mount this via SMT) This fine piece of history is available for $ 40.00 plus shiping. Thank you. John

Hi
I have an National NCX-3 that might meet your specs. It is a classic tri-bander. It is in nice shape physically, has the book and a homebrew powersupply/speaker. It has been sitting on a shelf for 10 years or so. For a year or so my girl friend used it for a novice rig. Worked fine then. I am located in Los Angeles.

From: Dan Nelson <djn@Goodnet.com>
Message-ID: <35356B9A.6430@Goodnet.com>
Source record: 106817

Hi Gang:

I fell in love the TV-7 tube tester when I aquired one about 5 years ago. Since then, I was able to come across some boneyard units and have provided some repair. In doing so, I have come to understand the unit in it's variations. Since then, I have run across others who wish to understand the workings of and expand the capabilities of the TV-7 series.

Perhaps the unit is one of the most universal testers available due to quality and recent military base closings....

To the point...Is there a forum for the TV-7 either on a web site or via an email forum...or perhaps a favorite news group....or whatever.... If not, perhaps there can be one as a clearing house for a users group...

Anyway, perhaps this is enough to spark a back-and-forth for views...Just a thought today...

782. Looking for info on BC-342-N

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-16 00:00:00 UTC
From: rjm@hpfirjm.fc.hp.com
Message-ID: <6h55c8$o72@fcnews.fc.hp.com>
Source record: 106833

Over 20 years ago I was given a radio that has since been relegated to storage. I pulled it out at the insistance of my kids last week and was surprised that it powered up and worked. The radio had a tag on it that identified it as a BC-342-N and was built by Farnsworth Television and Radio Corp. The only date on the radio is a painted stamp that says "Fungicide treated June 16 1945". Another stamp says "Before operating read TM 11-850". The frequency range is 1.5-18MHz.

I'm looking for any information about this radio. I would also like to find the training manual mentioned above, or a photo copy of one. Any help is greatly appreciated.

-Rob Martin

784. Titanic Wireless Room Exhibit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-16 00:00:00 UTC
From: joseph.buch@dol.net
Message-ID: <35364508.1251081@news.dol.net>
Source record: 106835

There is a replica of the Titanic's wireless room in a display about the Titanic at the Mariner's Museum in Newport News VA. They even have the sound of the spark gap transmitter playing. The message being sent is CQD CQD SOS SOS DE MGY MGY K. The CW is authentic. I'm not sure about the equipment but it looks similar to that used in the movie. If you are in the Tidewater VA area this summer, you might want to check it out. The Titanic exhibit is scheduled to end on Sept 7 but may be extended because it is really drawing good crowds. The museum also features exhibits about all aspects of the sea with something to interest all members of the family.

Hi Steve OM,

You can easily make any panel meter an "S" meter, by disassembling it,and removing the scale, and making your own scale for it. Paint over the original scale with flat white spray paint. You can use rubon letters and/or careful pencil or pen lines to make the scale. You can also make the scale ovesize, and reduce it in a copier and glue the new paper scale onto the scale plate. Lots of ways to do it. I have done this many times for homebrew rigs.

Heathkit collector and author Chuck Penson, WA7ZZE, will speak at HamCom 98, to be held June 5-7 in Dallas Texas. Penson, who prefers to think of himself not as a collector but as an "industrial archeologist" is the author of a collectors reference book for Heath ham gear entitled "Heathkit: A Guide to the Amateur Radio Products." Penson will talk about the history of the Heath Company and the development of its remarkable amateur radio product line. The presentation will also include slides from Penson's collection.

For more information about HamCom contact Maury Guzick at m_guzick@teleteam.com

790. FORSALE (or trade) Tinsley Labs classical cass telescope

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-16 00:00:00 UTC
From: jpl@qpc1.ho.lucent.com
Message-ID: <6h5p5p$in8@nntpa.cb.lucent.com>
Source record: 106841

```
------------------------------------------------------------
FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!
------------------------------------------------------------

MUST SELL (or trade)

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm WAS asking $2150. for scope and mount (and absolutely will
NOT sell them separately) but am OPEN TO OFFERS.

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino

I am preparing to bring the following items to Dayton. See you in flea market space 2109.
I'm happy to sell prior to Dayton any items that are reasonable to ship.

Johnson Navigator. Previous owner put a 3-1/2 inch Simpson meter in place of the Johnson meter. Not a collector's item. Just a working Navigator. $80.

Swan 500 parts radio. It works, but the panel and dial are very ugly. No power supply. $40

Hallicrafters SX-122. This is either a prototype or a repackaging job by a skilled ham. It's in a square cabinet. Chassis is very clean. Works. $80.

B&W 51SB SSB adapter for use with B&W 5100. Nice condition. I've never used it. $100.

Heathkit Twoers, 2-meter AM transceiver. Decent condition. $40 for two of them.

TMC GPR-90 receiver with matching speaker. Very nice. $550. Will not ship.

National NC-183D receiver. Nice condition. Electrically restored. $200.

Hallicrafters HT-37 Transmitter. $100.

Collins 32V-3 transmitter. $600. Too heavy to ship.

Collins KWS-1. Waiting for restoration. $1000. I may not have space to bring it to Dayton. Will likely be pick-up only in Chicago area.

Magnum Six RF speech processor for Collins 32S-1, 32S-3, or KWM-2. $100.

Collins S-line: 75S-1 with noise blanker; 32S-1; 516F-2. Nice condition. $650.

B&W 5100B transmitter. $175.

CDE Ham-IV rotor control box. Looks new. Got separated from rotor when estate was settled. $80.

Kenwood TS-950SDX. Very nice condition. $2350.

All prices are plus UPS shipping if sold prior to Dayton.
e-mail for details.

From: Craig Smith <ip500@roanoke.infi.net>
Message-ID: <3536BDBA.5FAC@roanoke.infi.net>
Source record: 106853

During Spring cleaning, ran across a box of 1937-38 Hallicrafter
knobs. These are the small knob on the Sky Buddy,SX-16,17,18,23,24,25--
Look like new knobs--anyway found 15 of them in a box. $5/ea

In the same box, and I'm pretty sure Hallicrafters never used these:
Same size and shape as the main and bandspread knobs on the
19,20,21,22,24 but these have a spinner molded into the knob--not right?
but kinda neat $8/ea only have 3 of these.

TNX, Craig

KY>What's wrong now? Everything is switched correctly. No SSB....please advise o
KY>necessary steps..otherwise one great radio....

If I remember, (and a HQ-150 was the radio acquired by our Ham Radio club.
when I was in HS right after we started with a halicraters S-38d); the unit
did not have a product detector but depended on use of the BFO and adjustment
of the rf gain and af gain to detect a SSB signal. Set RF gain near min, then
set AF gain for max, and turn on BFO (CW and SSB) position. In that mode
there was no AGC so you then had to adjust the rf gain as you tuned. When a
signal that might be SSB entered the IF response curve of the rx, you then
adjusted the rf gain and fine tuned the BFO injection frequency to clean up
the douald duck sound!.. As I recall from the current vantage point it did a
very good job...but back then I had been impressed by the S-38 and thought he
HQ-150 to be something to "LUST FOR"...I hope my memory has not slipped to
much detail and/or failed me...

827. Performance of Hammarlund HQ-170 on Six meters?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-17 00:00:00 UTC
From: "Jeffrey L. Bauman" <wb5kzw@hotmail.com>
Message-ID: <6h7m10$d9s@bgtnsc03.worldnet.att.net>
Source record: 106718

Has anyone used the HQ-170 on six meters in earnest?

How does performance (sensitivity, drift) compare with, say,
using the 170 with an outboard receiving converter (like Ameco)?

Thanks,
Jeff

Dean I know what you mean we keep hearing about Bad Apples here that the good guys fall by the wayside. Recently Bill Marx, W2CQ offerd an SX-25 for sale, I Sent him my money order and in no time it arrived very well packed via UPS and everything he said it was and more. Radio arrived in great shape and works like a champ.

This was particularly gratifying to me as it was a replacement radio for my very first receiver when I was a novice back in the '60's. When it arrived it was like stepping backwards in time, to those long winter nights trying to work DX with a home brew rock bound transmitter on 40 meters depending on the SX-25's crystal phasing filtering to null out the heterodyne's from the broadcast stations, and suddenly hearing a lone Austrailian station peeking through the interference, Pretty heady stuff for a 16 year old novice! Even more so when he acctualy responded to my barely 5 wpm sending. So you can imagine how pleased I was when the radio from Bill arrived in such fine shape.

IT is nice to hear from folks who have had GOOD expierences dealing with people here.

We have an engineering job opening in our development group here in Dallas, Texas.

We are part of the TIRIS organization, a division within Texas Instruments which develops and markets RF identification systems.

Our particular group develops product for the ARC segment (Automatic Recognition of Consumers). One important target for our products is the oil industry. You might have seen the Mobil Speedpass application, where one gets automatically recognized by the gas dispenser when fueling one's car.

The little electronic RF devices that Mobil issues are developed by us, we call them "transponders". They can either be on your keyring or be mounted in your car.

The devices work through an RF link, and also contain the necessary smartness by means of embedded software.

The associated reader equipment that goes into the gas dispenser is also developed in our group.

The person we are looking for has experience in receiving and transmitting techniques, modulation techniques, antenna theory, and some experience with digital electronics and embedded software.

I believe excellent engineering talent to be present within the world of radio hams. Therefore, if there is anybody that feels he or she fits the above profile, and holds an electrical engineering degree, please send us your resume.

Please send it to:

L.J. d'Hont Mgr development engineering TIRIS ARC segment

I still have a few mated pairs of 11 pin octal style plugs and sockets.
The plug is an Amphenol, brown micalex construction (holds up well under
soldering and will not melt like the mip types). Female 11 pin socket
is standard amphenol black bakelite unit. Mounting snap rings
included. Sorry I do not have any cord caps left. $9 for a mated pair
First Class postage paid conus. Tnx for the read.

870. HQ-100A help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-18 00:00:00 UTC
From: cbkent <cbkent@ix.netcom.com>
Message-ID: <01bd6aeb$7faaca00$dc66d9ce@cbkent.ix.netcom.com>
Source record: 106612

My HQ-100A has developed a problem. After a few minutes of normal operation, the volume drops suddenly. It does not fade--it drops suddenly to a low level.

If I switch on the BFO either during normal operation or after the volume drop, the radio stops working and the voltage regulator tube goes out.

Switching off the BFO causes the VR tube to light, but the set remains silent.

After shutting the rig off for a few hours, it is "restored" and works OK for a few minutes.

I've replaced the electrolytics and BFO tube with no results. There are no paper capacitors--only disc ceramics.

Any ideas on how to get this formerly great performer back to health?

Howdy!
Out of the cabinet, check your B+ voltage (would suggest just
before the resistor leading to that VR tube. Monitor this and you'll
likely find that your B+ voltage is dropping or drops abrubtly. Now the
question is...what caused that...if all this is true I'd try lifting
each of your power supply loads one at a time to find out if its one of
the loads or the power supply itself which is shutting down. Think
you'll find that prob easy to find. A guess....bad joint somewhere
between your rectifier output and the VR tube...Good Luck.

I could hardly agree more. I quit trying to enjoy ham radio in 1987.
Between 1973, when I became a ham, and 1987, when I packed away my
equipment. I think I had maybe 5 interesting conversations on ham radio.
The absolute, unvarying banality of ham conversation on both the low bands
and two meters never ceased to amaze me. These were presumably intelligent
people! They couldn't successfully pursue such an advanced technological
hobby if they werent! Yet they were as incapable of speaking intelligently
with each other on topics other than their health or their rigs, or of
exercising even the minimum imagination necessary to make human contact
with foreigners, as if they were children--or CBers. It took me years to
understand that this limitation was really an integral part of the ham
experience (I'm a slow learner.) Once I did understand this, I switched to
computers and then the internet, where usenet makes possible occasional
thoughtful and interesting exchanges (in between the cancerously-spreading

sex ads).

Hmm, I think I was mistaken -- it was actually "National/Panasonic." (or something like that). And I think it was SWL receivers they were advertising.

Anyway, I wonder if this was the same "National" as NRC.

882. IC-706 Modification

Newsgroup: rec.radio.amateur.boatanchors

Have here a Hallicrafters HT-37 trasceiver.
80-10.
Xtal filter (McCoy :-)
Beautiful work, looks better than factory.
Radio appears original from the front with
the exception of a meter switch.

Has anyone heard of or seen this conversion/modification?

I'd like to scare up some docs if there are any as
its many long hours to reverse engineer this thing.

Engineering prototype?
Did any of the early hallli transceivers use
9MHz IF ???

Thanks,

-bob

893. Cleaning out the Shack!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-18 00:00:00 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <35380420.C2E03C1D@carroll.com>
Source record: 106674
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hi all! Cleaning up the shack and want to find homes for a few things ive acquired over the years..

EAC R-390A/URR 1967 production date. All original modules installed. Recently cleaned/aligned/retubed. Excellent mechanical and electrical condition. Includes copy of NAVSHIPS manual (1970 edition) $500.00 plus shipping.

Bird Electronics Model 4385 RF power analyst. 7" high rack mount unit takes standard slugs. Large LED readout. Measures forward and

reflected power in Watts or dBm (CW or PEP), VSWR, Min/Max, return loss, and AM modulation percentage. Has BNC connectors installed, but can be easily changed. Line section can be remotely mounted at antenna location. Includes 5B and 50B slugs for 0-50 watts 50-125 MHz and original manual.
$250 or best offer.

Mostly restored 1947 RCA 630TS television set! All tubes good-including 10" round CRT! actually makes a picture now after a few repairs (new tubes, filter caps, resistors in PS) Could use an alignment, but I dont have an old sweep/marker gen to do it! Cabinet in original, good condition--nothing done to it by me. Even listens to local taxicabs on channel "1" Asking $200 plus shipping and crating (HEAVY!) Would prefer

pickup at northern NJ QTH..

Panasonic 1983 vintage portable broadcast/ENG camera. Model WV-3990 Saticon pickup
with built in bar/tone generator and genlock.SONY motorized auto iris zoom lens. Batteries, charger, and 1/2" VHS portapak VTR. System works GREAT! (Just shot my wedding with it!) LOOKS very professional too--get great man in the street stuff-people will think you are 6:00 news if you

go with a group! For the advanced amateur video person/media pirate/culture jammer. Asking $250 for package.

Also in the same vein...become your own broadcast station!

7 Watt PLL FM broadcast band TX housed inside a TEAC stereo cassette deck.
Unit looks like normal cassette deck, except MUCH heavier, and additional BNC antenna connector on rear panel. Will broadcast directly from the cassette deck for unattended use, or put deck in "record" and will accept line level audio applied to "Record IN" jacks on rear panel.

Transmitter circuit is homebrew clone of Northcountry MPX96, followed by 7 watt PA module removed from commercial FM broadcast exciter. Additional circuitry is powered by internal 24 VDC linear power supply ,

fed from the 120 VAC line. Unit has extensive RF shielding and low-pass filtering for spectral purity. Built by professional electronic instrument designer (myself). Operates from 88-108 MHz, selectable by DIP switch. Crystal controlled subcarrier and PLL synthesizer stages. A great way to get on the air FAST with a commercial-sounding signal! Asking $300 plus shipping.

30 watt linear amplifier for above:
Takes 7W input for 30+ watts output. Continuous duty with LARGE finned heat sink.
Runs on 12 VDC. asking $75 alone, or $50 with above transmitter.

Various laboratory glassware--too numerous to list (beakers, flasks, condensers, funnels, pipettes, etc.) Hundreds of pieces, some worth BIG BUCKS! $300 plus shipping for all.

Working color TV -19" Sharp-good pix FREE with any of above if you pick up. $20 by itself.

The Radio Amateur is:
CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

Been wondering about this.

I remember seeing the building in Melrose(?) Massachusetts when I was a kid.

So -- what was the last rig they made? Anybody know about when they left
the amateur market?

At one point during the '70s there were ads in QST for radios made by (I
think) Rockwell/National, but was this the same "National" as made all
those great boatanchor receivers and NCX-3/5?

Thanks for any info on this.

National started out in Cambridge, MA in 1914 making stamped metal toys, household utensils, etc. Moved to Malden, MA in the late 20s and to Melrose, MA in the late 50s. Started making Radio parts in the early 20s and shortwave gear in the late 20s. They were pretty well out of the ham radio business by the early 70s and had their final bankrupcy sale in 1991.

See my web page at:

```
February 20, 1998
Dear President Stafford,
You have not responded to my letter of September 27, 1997 where I
questioned why I was removed a VE. I have not violated any provisions of
97.525 or any other aspect of F.C.C. regulations that govern this hobby.
Thus unless you restore my VE status FORTHWITH I shall send the following
letter to newspaper editors throughout the country (on a staggered basis).
This is a threat. I believe fully in what follows. The only reason I have
not written this letter before was I was not motivated to actually send it.
```

Dear Editor,
There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.
The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).
Burt Fisher

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:
1. A naked chic
2. An actual picture of Burt on the throne.
3. The writings of me and others on ham radio, hear a typical ham contact.
4. The warm side of K1OIK, hear me speak, see me with famous people.
5. A test for your SVGA monitor
6. Pictures of me and my family.
7. A Nazi connection in ham radio?
8. See now the future of ham radio.

2 ele 3 band HF quad antenna. Hy-Gain, all aluminum, everything
including
the boom-to-mast clamp. I tossed out the crappy gamma maching network
and
opted for a remote relay DC switched feed. I see some novice or tech
having
a real good time with this 'cause it'll probably need some fiddlin' and
diddlin'. 26' tip to tip - not for the faint of heart and probably not
for
field day but who knows. Fun to play with. All copperweld element
wires. A real go-getter. Take it home (I can't possibly ship this
without
a major hassle) for $50. I live in southeastern NH, near Exeter NH.

Conversation is a two-way street. If you have nothing to offer, chances are
you will get nothing in return. It's that simple.

942. AC hum on HW-101 TX

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <353a60e5.89201550@news.erols.com>
Source record: 106524

I recently started getting reports of AC hum on the transmitted signal from my HW-101. I immediately suspected the filter caps in the power supply (they have been in need of changing for some time) so I did a complete recapping job. Power supply working fine now, but I'm still getting reports of AC hum.

Any suggestions on where I should focus my troubleshooting efforts?

Thanks, 73 Bill N2CQR

Cross-posted to: rec.aviation.military,rec.radio.swap,rec.radio.amateur.boatanchors

Hi all,

I have a BC-457-A (by Western Electric) in original condition. This radio has not been cannabilized and is only missing the plate over the output tubes.

I would like to trade (straight across) for a BC-459 or BC-696 (of like condition) with frequency coverage in the amateur bands. I intend to (eventually) use it on the air.

I will pay for shipping my unit to you and will reimburse your shipping costs to me (up to $10, UPS).

If interested, email me with your specifics. Thanks.

From: nielw@ix.netcom.com
Message-ID: <353A4ED1.16DE@ix.netcom.com>
Source record: 106537

My National NCX200 transciever once had a hum that couldn't be cured.

I finally traced it to the routing of the AC line going to the front
panel power switch. Turned out that it was run through the same wire
bundle as the low level audio signals.

Routing the 120VAC line outside the wire bundle solved the problem.

962. Rockwell Mechanical Filter Specs?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: tayloe_d@ix.netcom.com
Message-ID: <353A6710.AFF@ix.netcom.com>
Source record: 106544

I picked up a couple mechanical filters for a good price
and and now trying to figure out what frequency & bandwith
they are. Since I like to homebrew, if they are an
appropriate width, it really doesn't matter to me what
frequency they are (9 MHz, 455 KHz, etc).

Marked:

526 9831 010
8522

Rockwell International

FSCM No. 2X491

I am hoping they are cw bandwidths widths or they are not of
much use to me.

I found a filter that physically looks *exactly* like it on a
webpage of Surplus Sales of Nebraska:

http://www.surplussales.com/Filters/CoFiltersmain.html

model 526-8319-010, Fc = 455 KHz @ 2.1 KHz BW.

Thanks much!

For Sale: Collins R390A receiver, Collins Mfg including PTO. Ser # 2787 Contract # 8719-P-55. Has Naval Electronics Systems Command overhaul date of 10-66. Front panel has red test point installed. Front panel has a glossy finish which was presumably done during the 10-66 overhaul. No dust covers, but complete otherwise. Has 3TF7 ballast, but plug in Silicons in the Power Supply. All knobs in good shape and the tuning is smooth feeling. Unit has been in dry storage and is dusty, but no noticable corrossion or dings or dents. Front panel is the engraved variety. Would like to trade for a 75S3 or make offer.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes,rec.audio.pro

FOR SALE:

110 watt stereo FM transmitter -- uses Gates TE-1 crystal-controlled transistorized exciter (10W output) driving a modified GE Progress-line transmitter (power-amp only) with 5894 tube output. Includes spare power-amp, new spare tube, setup mounted in heavy 6-foot steel rack. Works well and reliabally. With manual for TE-1. $250, local pickup only.

8-channel Ampro solid-state stereo broadcast console -- four inputs per channel, four channels have gain for microphone input. Built-in 20W monitor amp and muting functions. All inputs are transformer-coupled (nice iron) and use rotary stepped attenuators. Unit functional, needs some work. $150, local pickup only.

Misc. power transformers, mostly with high-voltage windings, most pulled from old tube-type test gear (HP, etc.). Many potted, a few antiques with ceramic insulators. Some look nice, some don't. Free for local pickup.

I'm in the Kansas City area . . . have to get rid of this stuff in order to move. Email me if interested, I don't read all these newsgroups. So there.

Well, Carl. I just received two courteous emails explaining that it's not the proper thing to do. So, I will post FS items on the rec.radio.swap NG. I understand it is desirable to keep this and certain other NG free of FS items.

970. FS: Mot. HT-220 Freq. Synthesizer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: w1ksz@tiac.net
Message-ID: <353a7ea3.3370691@news.tiac.net>
Source record: 106552

Got two left, buyer never sent check.
I found PC boards and assembly instructions for a synthesizer for
the Motorola HT-220 Walkie. The boards are solder-plated and
I only have 5 of them. Looks like a neat conversion for the
person who has everything.
$10 for the board and copy of the assembly instructions.
NO OTHER COMPONENTS INCLUDED.
Add $3 if you want it sent Priority Mail.
73, Dick, W1KSZ

971. FS: National HRO coil set

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <1998041922580400.SAA05701@ladder03.news.aol.com>
Source record: 106553

I have for sale a National HRO 5 coilset type "F". This is the rare broadcast band coverage set (480-960 KHz). It is in excellent operating condition. The metal logging scale has been replaced with a linear scale under plexiglass. Price $75. shipping included.

Jon, K1VVC

972. FS. TV7D/U tube tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: Chong Ong <ongkt88@erols.com>
Message-ID: <353A74F6.3C6@erols.com>
Source record: 106554

Nice TV7D/U tube tester for sale. $200 plus ship.
Or trade for audio tubes.
Thanks.
Chong in Va.

Source record: 106556

Is it possible that those you worked would say the same things about you? I frequently end a QSO quickly, when it becomes clear that the other party has nothing to add. As I work 98% cw, the clue to me is when the other station adds nothing new to the qso; he/she may answer a direct question, but they ask none in return, or make no new statement of observation. But as I am not a depressed personality, no do I project negativity on the world around me, if I find one qso stale, I do not assume that they all will be. And they are not. Perhaps you have met the enemy, and he is YOU.

Regards,
K&#65533;MB

I dropped my HT in the lake and need to replace it. I'm looking for a
cheap
one. Needs DTMF key pad and CTCSS tone encode. $75 or less, plus
shipping. C.O.D. only. I'll pay for it.
If you have an old one around email rdonahue@cam-walnet.com.
Tnx and 73,

977. OLD TEST EQUIPMENT FOR SALE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: "Dr. Gar Ko" <komudo@feist.com>
Message-ID: <6hejij$j0k$1@supernews.com>
Source record: 106559

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or komudo@feist.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section, 0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section. 0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

56.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

57.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

Same are available NOS from vendors in the Nuts & VOlts catalogs. Last issue showed single quantities in the $1.20 range or so. Quantity purchase would probably net you costs even less. Enjoy.

988. A TIME TO VENT...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <6hbt3u$ipp@sjx-ixn8.ix.netcom.com>
Source record: 106642

(This is an excerpt from a letter I wrote to a fellow sufferer.
I've removed the names to protect both
the innocent and the guilty.
It concerns people who don't like the way some of
us choose to sell our personal property.
I'm posting it here because I feel like
getting this off my chest.
If you want to throw flames or flowers- knock yourself out.
I've said my say and won't respond publicly--
Until the next time I feel like venting, that is ;-)
D.S.

Dear (Mr. X)
Your experiances on (a couple of boatanchor-related lists)
sound exactly like mine!
While the vast majority of members are honorable,
"live-and-let-live" people,
there is this noisy little minority that is used to
stealing stuff from novices or having stuff given to them.
Now they expect it. There is also a little crowd of gripers
who hide their pique at not being able to buy--
(or just not wanting to spend money)
by donning sackcloth and ashes, weeping and mourning
and beating their breast about the death of "THE Spirit of Ham Radio,"
..... whatever the heck *that* is!

I got a belly full of it, too.
I'll post to the lists when I have something really special
and just delete the noisy little puppies.
(The list owners) can boot me off if they don't like it.
Please don't throw me in that briar patch, Massa!
That's tons of email I don't have to deal with anymore,
so they can break my heart ;-)

Uh oh! You got me started! Well, no you didn't.
I can't blame you. I started myself when a guy got in
my face at the Belton hamfest today. He started the
"Spirit of Ham Radio" malarky, then proceeded to tell
me how he bought ART-13s for years for $27. I told him
I bought bread for 30 cents a loaf for years, too and what
did *that* have to do with anything. I finally told him
if he would pay my children's doctor bills
for this week, I'd sell him an ART-13 for $27.
He didn't care for that much.

The TRUTH is that he wanted the rig but didn't want to pay
the extremely reasonable price of $70 for an unmodified Collins ART-13.
I guess "THE Spirit of Ham Radio" means
everyone should give their stuff to him, right?

I have to tell you, (Mr. X)... I have a family that needs to
eat and have clothes to wear. Things are very tight finacially
and I can't afford to throw my assets away
in a vain attempt to appear saintly.

For tens of thousands of years, auctions have been and still are accepted
and honorable ways for buyers and sellers to meet
and freely agree upon a "fair" price.
The Free Market- the most successful institution ever conceived by Man.
Who am I to argue with eons of success?

It would be nice if I had the luxury to play Santa Claus on the reflecters,
but I don't. I will help all I can as long as it doesn't impact
my responsiblities as a father and provider.
The detractors don't pay our bills,
so they are less then nothing from where I sit.

You know-- if it weren't for those of us who get out there
and do the legwork-- risking our money and our time and
our sanity to find, recover, restore and bring these
radios to market, nobody would have any boatanchors to
worry about! I'd like to see some of these whiners
get their wrinkly ol'butts in some of
the dirty, smelly and dangerous places I go
to try and recover old radios.

HUFF! HUFF! Wheeeeew! Thanks for letting me vent!
Best Luck on your auctions, OM. Don't let the BS from
the detractors get you down. It's their loss.

From: w0ui@aol.com
Message-ID: <1998041906260400.CAA20303@ladder01.news.aol.com>
Source record: 106645

Hi. Woody in Colorado.
Regarding your request for the clock for the
Hammarlund receivers. I, too, had needed a
clock for my HQ170.
This is what I did...
I began shopping the junk and thrift stores.
I picked up two GE brand older clock radios
for maybe $2 / each.
The CLOCK part of these GE radios fits
pretty much perfectly into the Hammarlund
receiver
The clock you want is made by TELECHRON
and has a black rotary-type switch that goes thru
the hole under the number six.
The attachment holes all line up pretty much
perfectly with the pre-drilled holes in the HQ170.
The two issues... in my case...
I did NOT wire the clock (as per original specs)
to turn on the receiver using the clock's alarm
clock feature. It could be done but, since I would
never use the feature, I just wired the clock as a
clock.
The second problem I haven't resolved yet is the
extension rod so that I can SET the clock without
actually opening up the receiver.
For a background on my clock I had intended to
make a clock face using the computer... but...
ran out of time and just trimmed my QSL card to
fit.
You can see a picture of my clock installation on
my personal ham homepage at:
http://members.aol.com/w0ui/ham.html
Hope that helps.
Good lock.

993. Re: What became of NATIONAL (the company)??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: Young Kim <K6hm@wenet.net>
Message-ID: <3539A651.7511@wenet.net>
Source record: 106647

Hello,
The National brand for Panasonic is nothing to do with National Radio Company who made HRO and NCX-3 and NCX-5 and other fine receivers. The big Japanese company called "Matsushita Electronics (means under the pine tree) have been using the National brand for domestic for over 50 years and use the brand name of Panasonic for the international business which they still do. Sometimes they were marked as National/Panasonic. Interesting enough, Matsushita used to make Ham radio equipment in early '80. One of the Ham radio product that they exported to the US was the HF transceiver made for Hy-gain right before they were out of HF transceiver business.
I hope this answers your question. Best 73's,
de K6hm

1002. Help with SB-300 tuning

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-19 00:00:00 UTC
From: Dwight W9YQ <dgbcms@netnet.net>
Message-ID: <353A06F0.381CE7E8@netnet.net>
Source record: 106656

I just acquired a SB-300 ES SB-400 from an estate but have no manual, cords, info, etc. They are in mint shape! Would like copies of the manuals, of course I would be happy to reimburse for any expenses?

I need an explaination on the tune up procedures for the SB-400 urgently?

Thanks ahead!

1003. SP-600 Bandspread Dial now available

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-20 00:00:00 UTC
From: msix@rt66.com
Message-ID: <6hgi6a$n62$2@news.rt66.com>
Source record: 106408

An attractive, professionally made reproduction of my old
1968 SP-600 ham band only bandspread dial is now available.
It fits on the front of the logging dial inside the logging
scale and covers 160-10M plus WARC bands.
I have used this with four SP-600s and had no trouble aligning
them to the dial.

Contact Mike Tobin, the old-radio-dial maker, at dials@juno.com
to order.
See his page at http://members.aol.com/rockseaent

I sent Mike installation and alignment instructions which he
plans to include with the dial.

Items for sale.
Respond by quasi-Deadline April 23, 1998 or not much afterward.
Respond to dv <102545.1625@compuserve.com>. (send phone number if you wish.)
None of this stuff is in great condition; quality ranges from serviceable down to salvageable and below.
I would like to place this stuff with people who can seriously use it.
I won't respect offers of "cartage" ($0 but you pick it up). I have to impose penny a pound minimum to discourage attic-stuffing.
I could give things away to credible associations (without paid executives).
You pick up or else pay shipping or delivery; (could approach $0 if between Ulster County NY and Nassau County NY.)

Stuff:
Black metal lunchbox; 1950s looking; "THE AMERICAN THERMOS BOTTLE CO." and winged-"V" logo stamped. handle lost, paint worn off bottom.
Dormeyer Mixwell model 5100 Hand Mixer old, heavy, white paint flaking
Electric meat grinder
Golf club with wooden shaft
Golf clubs (qty 15?) in bag.
Handcranked meat grinder
Rotary dial telephone; old 1950's looking wide; "Z" on operator; paint spilled on it; dial stuck; speaker and microphone on contacts like 1960's phones
Slazenger tennis racket (circa 1972?)
Wurlitzer Electronic Piano like Fender-Rhodes; attached to wheeled base; built-in amplifier and speaker; works (1 key sticks)
Beta tapes L-750 HG Chrome "PD Magnetics" used 0x-1x+ (qty 8)
Pre-recorded reel-to-reel tapes of classical music (qty dozens)
Chair, 1950's?, tubular legs, green marble-print seat, white marble-print back with blue floral design over; (tears & exposed stuffing)
Kitchen table, 1950's?, green formica with wood grain; tubular legs; with leaf
Kodak Cavalcade projector; no lid
Remington Rand "Remington Noiseless" manual typewriter; green keys
VHS/Beta tape carousel
Clothing (10 bags)

Electronic units:
AC-DC Electronics Power Supply RT301-2 5V@60A and 15V@4A
AMECO ATPS-3 sn 66A1076 what-is-it; has a Sola transformer and 10A meter and 2 UHF connectors
Amphenol Millivolt Commander model 870
Blonder-Tongue TV camera model TTVC 1-6; single vidicon tube; muli-lens turret; no lenses

Channel Master 6604 "4 Dim AM-FM Stereo" "27 transistor 2 IC ..."
Eico VTVM model 232
Harmon Kardon Ballad in improvised case
Heathkit HW-30 Two Meter Amateur Transceiver (marked "6/67")
Heathkit GD-1B Grid Dip Meter (hand-painted scale)
Heathkit IM-17 SSVM Solid State Voltmeter
Heathkit IM-107 VTVM (manual can be found)
Heathkit VF-1 signal generator? 1750kC-30MC
Janeil BLR 200 Multiple System Satellit Receiver
Lafayette HA-650 Transceiver; mini size; mobile?
Midland 23-105 VOM black plastic case (cracked & glued)
Monitoradio Scanner
Pontus IC-300T AM/FM Stereo Tuner (mfgd August 1979)
Precision Series 912 "Electronamic Tube Tester"
Regency SR5000 Satellite Receiver new&unused-looking in styrofoam with
remote
Signal Corps Radio Receiver BC-348-R 28VDC black crinkle paint, 6 bands
Signal Corps Radio Transmitter BC-457-A "US Army" "Made by Western
Electric"; rolling contact on inductor tunes it (visible through window);
"Stop dynamotor before removing this cover."
US Army Signal Corps Frequency Meter BC-221-N by Philco 125 to 20000kC
Supreme Multimeter model 592 wood case (dv)
Zenith Video Director (beta-2 / beta-3) VR8900W VCR (might work)

Electronic Hulks (all are in "bad shape" to very bad shape):
AIWA ~10" b/w TV
AKAI CS-M01 cassette deck
Channel Master 6606 "Solid State FM/AM Tuner/Amplifier"
GE Porta-Fi console (transistor)
Jerrold model TM Tele-Trol Modulator
Leading Edge 386 computer (non-operational)
QUME QVT-102A terminal intact & dirty; also 2 ruined bases
Hallicrafters front panel tin only
Scott "Wideband FM MPX Stereo Tuner" 9-tubes dirty
Wang Epson MX-80 rusty
Xerox X391 Acoustic fax machine (takes telephone handset; has a paper slot)
no-name rackmount 5-tube what-is-it (qty 2)
Keypunch keyboard (no IBM marks)

Electronic misc:
heavy power supplies
mini power supplies
aluminum heat sinks
transformers
used vacuum tubes many types incl. 12AX7 6L6 (qty 200?)
7400 series TTL ICs many types (qty 5 to 100 per type) 1970s date codes?
2102 (?) memory chips (qty 100s)
old capacitors switches relays

Computer stuff:
8" diskette (box of 8 new)

Leading Edge keyboard
Radio Shack Color Computer 2 (qty 2)
Radio Shack Color Computer 3 (qty 1)
Radio Shack Color Computer Disk Drive FD501 (5 1/4" floppy)

Books:
Electronics books and Amateur Radio books (qty 100)
Engineering books and technical books (other than electronics) 150
Miscellaneous books (hardcover and paperback) (qty 250)
dBase 3 and 4 books (qty 9)
old DOS and various old applications books (qty 30)

The FCC is currently considering licensing low power FM stations
for use on 'unused' local frequencies in the FM band. Only those
causing interference to other licensed operations would be
considered pirates. Presumably there would be no type acceptance
of equipment, since there would be no way of inspecting sites.

Source record: 106575

All-

I have a Heath HO-10 monitor for sale.

This unit is not in working condition (can't see any display); it has been dropped sometime in its past, as the intensity/on-off knob has broken off, and there is some warping on the faceplate. The rest of the knobs and case are intact, and all interior parts appear to be in good shape. This would be a good unit for either parts or a repair project.

The assembly/instruction manual is included. $20 plus shipping from Ohio.

Please send inquiries directly to cas@csi.com

It is *very* unlikely that the FCC will return to licensing low power stations. They stopped because of all the mutual interference problems and lack of rule compliance due to low power broadcasters. But if they were to resume licensing low power stations, they would almost certainly require use of Type Accepted equipment as they did previously. (Even an unlicensed service like CB is required to use TA equipment.)

And if a station is licensed, the FCC would then know where it is located (that would be on the license), so they could pull inspections. The FCC hasn't been very active in performing their legally mandated compliance duties of late (they've laid off most of the field staff and hired a bunch of DC lawyers to run spectrum auctions), but that could change very quickly.

A new Administration, or a Congress read the riot act by the NAB, could get the FCC back to doing their legally mandated job in a hurry. Then the RIs would again be out looking at stations and making sure that their equipment is TA, that towers are properly marked, that proper logs are being kept, etc. I think most of us in broadcasting would welcome that.

And many amateur radio operators would similarly welcome a return to proper regulation of the amateur service. A few thousand pink QSLs with stiff fines attached would go far toward cleaning up the mess that HF amateur radio has become.

One of the problems that compliance activities have faced is the inability to collect fines. The way deliquent student loans are now being handled could serve as a model to change that. They're turned over to the IRS, and a levy is placed against the offender's income through the payroll withholding system. The FCC could do the same for fine collection. (Some hard jail time for the worst offenders would have a salutory effect too.)

>Well, Carl. I just received two courteous emails explaining that it's not the
>proper thing to do...

Nonsense.

That's the small group of gripers I just wrote about.
Posting any boatanchor radio for sale by any honest and honorable
means, which is what auctions have proven to be by their eons of
acceptance in our society, is clearly within the charter of this group.
If you want to fiddle with the charter to try and define acceptable
types of sale, you can file to change the charter.
Those of us who live in the real world can do the same, by the way.

The fact that a few malcontents find it distasteful to compete in
the real world for what they want does not make it "wrong" or
"discourteous" for other people to do so.

Why these people can't just delete the messages they don't like,
as a grown and mature adult would do, is beyond my understanding.

Most Sincerely,
David L. Stinson AB5S

> and two meters never ceased to amaze me.

Did it ever occur to you that it takes two to make a conversation? It's not new to bow out whenever the content of the exchange gets so light as to be uninteresting, but I've frequently been surprised what a seemingly unrelated comment by me brought out of the other party and what interesting "threads" it sometimes led to. Frequently other hams join in who were just monitoring when the interesting stuff started, and who now find reason to join in.the proceedings. This frequently leads to extensive roundtables that go on for some time, interesting all the way, on most any subject you could think of. Don't blame ham radio for your own shortcomings as a conversationalist.

One of the most interesting on-the-air groups I get into is headed up by a fellow who is a wheelchair quadriplegic, has very limited usage of his upper extrremities and still builds amplifiers and tuners. He is also an accomplished machinist and gunsmith, and is knowledgable in a wide variety of subjects. Throw a comment out for this crew and it draws anything but dull responses....There are a lot more people like that on tha air than you evidently could imagine.

Aw, c'mon now - he's good for a chuckle at any rate.
He's one of THE BEST Trollers I've ever seen! Gets a
big rise outa the unsuspecting (and/or the self-righteous)
EVERY time. You gotta - grudgingly, I admit - respect
that kind of talent, even if it is saturated with p**s 'n vinegar....

I worked with a guy like that once; watching his effect
on those around him was a real hoot, too. Harmless sort,
as long as you didn't take what he said personally or let
it get under your skin. If you did, you'd just painted a
big target on your forhead as far as he was concerned.

Hi, Woody. The clock setting extension rod is simply a piece of composition material abt 1/4" in diameter with one hole drilled in the end and attached, friction fit, to a small shaft that extends from the back of the clock. I would imagine a wooden dowel would serve as well (for example, a round rod from a kite). The end of the extension rod was split in my receiver, and I simply wrapped it with dental-floss using the no-frey technique I learned in the Boy Scouts where a small line is used to wrap end of a rope in order to prevent it from unraveling. I then twisted the end of the extension over the shaft that extends from the back of the clock. If it slips again, I will super-glue it. Haven't had to so far.

Either Hammerlund, or the previous owner wrapped tape around the rod where it protrudes from the back of the receiver cabinet. I would guess the tape is to protect the rod and/or the cabinet from chaffing. I left the tape in place.

Graphite is a low Z material (meaning it has a low number of nucleons and an equal number of electrons in the nuetral atom - charge balances). Z for carbon is 6. To generate x-rays, efficiently, you want to have a high Z material, e.g, tungsten, Z=74, and something that dissipates heat well (so you don't boil the target away.) I would think that the discoloration in the 813 is due to impurities in the glass that have somehow reacted with trace gases in the tube or glass (oxidized) due to the heat in that area of the tube. The 813 is not rated to withstand the potential voltages required for x-ray generation. I still think that while x-ray generation is possible at 10 kV and above, 25 to 30 kV is required before it becomes a health/safety issue. Any x-ray generated at the lower potentials is very weak, i.e., easily attenuated by a few cm of air. And there ain't many of 'em...efficiency is horrible at low kV. It isn't all that great above 30 kV...about 1% of energy is converted to x-ray, the rest is heat...and that with a tungsten target is a copper holder, in a vacuum.
Nope, don't think x-rays discolored your 813.

Sounds like electron-bombardment of the glass. Those spots occur in areas with a direct view of the cathode. Electrons that are accelerated by the plate, but MISS hitting the plate continue outward and strike the glass envelope. Electrons disrupt impurities in the glass causing elemental changes and color shifts. Kinda neat thought--a TINY particle accelerator in a glass envelope that can transmute isotopes bound into a borosilicate matrix. Sounds a hell of a lot better than "tube" :)

Since Never. And the TE-1 hasn't been for years, either. That's not the point.

Possesion of this equipment isn't illegal, nor is its sale. You can do illegal things with it. You can do legal things with it. You can use it responsibally, or irresponsibally. Like your car.

Responsible use of this would include backup or emergency use for a severely budget-restricted liscensed FM station, or a community station. Responsible use would also be, IMO, quality, interference-free pirate broadcasting. This transmitter is capable of such, with an RF output cleaner (yes, I've measured it) than the majority of low-power type-accepted equipment that I've seen. Like all transmitting equipment, it requires a decent amount of RF experience and general give-a-damn to use properly. The same goes for your big ol' sweep-tube linears.

Get over the whole "illegal = irresponsible = immoral" crap. This is good stuff at a bargain price.

I recall seeing an article in an old Scientific American "amateur scientist" column. The idea was a homebrew x-ray apparatus. Used a 1B3GT television HV tube as an x-ray source. Other variations tried included 6BK4 types, and the BIG UNIT (dont try this at home kids!) using an old radar tube (4PR60). Have to see if i can find it again...

This is an excellent suggestion. When I had an HQ-170C I put a
regular 1/4 knob with a set-screw on the outside-of-the-cabinet end of
the shaft to facilitate setting the timer.

>arc5@ix.netcom.com

Well, David, I should probably ignore your comments. However, since I
am the author of one of the messages that C.J. referred to, perhaps I
should point out that his message was cross-posted to several
newsgroups. When I responded to his question as to the
appropriateness of his message, I was doing so in the
rec.radio.amateur.antenna group. I pointed out that the
rec.radio.swap group was more appropriate. I didn't mention
boatanchors. The second issue was regarding the posting of "notices"
that something was available on eBay. With regard to that issue, I
simply suggested that if he insisted on posting such notices, that it
would be helpful if he were to include eBay in the header so that
those who aren't interested could have their software screen those
messages out.

So that was it. An observation that the antenna group wasn't the most
appropriate group to post a for sale ad in and a simple request that

eBay be included in the header so that it could be deleted easily.

For that, you categorize me as a "malcontent," and suggest that my behavior was less than "mature and adult." Perhaps you would care to explain just what I said that warrants that judgment. I've always been willing to learn from my elders and/or those who know better.

Just as sincerely,
Kenneth D. Grimm, K4XL

1061. Hammerlund HQ-180A alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-21 00:00:00 UTC
From: timzmud@skyenet.net
Message-ID: <timzmud-ya023080002104980723090001@news.skyenet.net>
Source record: 106418

I would be interested in hearing from anyone who has had experience in aligning a Hammerlund HQ-180A. It seems that if I follow the instructions for the 60 kc alignment in the manual, the radio doesnï¿½t work properly. But if I tune a signal and tweak the I.F. cans by ear, I can get the radio to work great. Perhaps I should leave well enough alone, but it seems to me I should be able to follow the book to get a good alignment.

The HT-37 is not a transceiver. It is a transmitter.
The stock unit uses the phasing method to produce SSB.
Your unit has been modified to use a 9 MHz crystal filter
to increase the unwanted sideband suppression.

Yeah. I remember something about that too. You did need an awful lot of HV though. This article used a flyback similar to the old(? - I'm dating myself) color TV tube receivers. I think you need about 30-35 kV to generate decent x-rays (enough to fog a film placed close to tube). The old tv's used to be capable of generating x-rays when HV got over 30-35 kV or so. Service notes always told you to check for xrays when servicing the HV section (hv rectifier, regulator, damper).

I have just finished (well....maybe) repairing a "nice" (sic) Valiant I picked up via this newsgroup. Having pretty much fixed all that was bent, burnt, busted, or flat out missing, it appears to make watts, sans smoke. Before I button it up (I may need to add zippers, though) I'd like to re-cap this beast. Its obvious that the electrolytics should be done, carte blanc, but does anyone have intel on what others are potential culprits, e.g.: the plastic tubulars or maybe some of the red "micas? Or, for that matter, any other poltergeists! I don't see any of the famous black plastic caps I hear so much about, but any info will be much appreciated. Oh yeah, who was it who had the long cabinet screws?
Tnx Jeep K3HVG

I still have copies of manuals for the following Hammarlund Models.

HQ-50
HQ-100
HQ-105
HQ-110
HQ-110A
HQ-140X
HQ-170
HX-ONE

If interested write me at:

cvaughn2@yahoo.com

Thanks,

Charlie

180 alignments can screw up the receiver -- for example, if you go by the manual and don't align for the actual DX bands your readout will be way off. I'm not an expert however, so seek other 180 experts out there....

I'd say you were unlucky, I've been licensed since 1965, built many pieces of
equipment, synthesized multiband transceivers, test equipment like a spectrum
analyser module and the like. I never owned a commercial rig until 1992 when I
saw them at a price Stateside that was hard to pass up on.
Over the years I've had skeds with many parts of the world, seen a few of those
I worked when on my travels. I even had a good long chat with the skipper of a
Varig 737 flying between the Capital of Amazonas State and Recife. It depends on
what interests you have, I enjoy chats on general things, airplanes (sexiest
things on 3 legs), radio and lots more, I shun the computer chats except with
people I know, the ones who will go on about how wonderful Windoze XX is and
it's outstanding packet software, poor blokes salivating over Microdro$$
operating systems.
Anyway, got a CT-2 to fix and get packet back on the air and if it stops
raining, get drilling a wall to pur that 2m antenna up above the roof.
One day soon I hope we can make the jump to 56K packet and shift some real
stuff, we keep moving an inch at a time modifying ex-PMR stuff, but think we
need to build from scratch.
Regards

For sale: most of a Heathkit DX-40. This looks like a kit that was partially finished. The only "heavy" component is the HV choke. Some of the sockets are there. However, the front panel, all the knobs, switches, and the meter and cabinet are all there and in excellent shape. For someone who has a "parts" DX-40, or one that needs a whole new exterior. No manual. Price $40., plus $10 shipping.

Dear Kenneth,
You should not be so quick to take offense.
The poster said that a "couple" of people
(not "Kenneth"), had told him that posting Ebay
notices on R.R.Swap or R.R.A.Boatanchors was inappropriate.
I took issue with people who comdemn posting Ebay notices.

By your own statement, you said nothing about such notices
being inappropriate on R.R.Swap or R.R.A.Boatanchors--
You said only that you'd like to see
a note of auction in the title.

Therefore, my comments were not directed to
you and your offense is groundless.

Now that that is cleared up, I also got some
very civil notes saying that people posting auctions
should, out of courtesy, say "FA" or "Ebay" in the title.
I have resisted this discrimination of type-
of-sale in the past, but now have second thoughts
since your and their arguments do make sense.
In the future, I shall include "FA" in my
Ebay sales notices.

weird! The darn thing works just fine for all 4 pins except 2A3's and 45's,
when I push the test switch for these tubes I get reverse DC current
flowing through my meter and of course the Gm meter just quivers at zero.
Other low filament voltage tubes test normally and other high power tubes
like 10's do too. Aside from this fact all other meters appear to work fine
and are fairly well calibrated. The machine itself is in very clean
condition in and out. Any help would be greatly appreciated.
Thanks

1100. Re: Help with Hallicrafters HT-37 transceiver.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-22 00:00:00 UTC
From: BOB DUCKWORTH <bob@atl.org>
Message-ID: <353DC774.3D94@atl.org>
Source record: 106457

Jake-

Please consider that I am looking at the radio and you are not :-)

This HT-37 is now a transceiver and I am looking for information.
If anyone has seen an HT-37 transceiver conversion close to
this description, I'd like to hear about it.

RX parts: 6C4 for 100kc calibrator
6DC6 RF amp/preselector
6BA7 MIX
6BA7 1st IF
filter and trans
This is on a subchassis that replaces the power transformer
and is bandswitched by coupling to tail end of original
bandswitch with a lever.

```
-----------
/ / <lever arms and coupling rod
O O <end view of shafts
```

TX/RX audio/detector/IF/SSB generator module"
This module replaces the stock phasing type 9MHz SSB
generator. Tube complement
6BN8 (I love this tube!), 6EA8, 7360, 3 x 6AU6, 1 x Miller
bifilar 9MHz and 2 x 10.7MHz interstage trannies.
carrier osc/beat osc lives on a sub chassis where the
filter choke used to be. 12AU7 and 8998.5 and 9001.5
MHz xtals.

VOX: It has a nice VOX which required an additional tube.

TX: Heterodyne osc, VFO, Mixer, and finals are stock HT37
A tube was added as part of transceive function but I
forget what it is.

Plug in relays (ala late KWM2) for transceive function.

Power Supply is now external and I didn't acquire it with the radio.

Front of radio is stock appearance with the exception of very
attractive meter switch, one position of function switch deleted,
2 pin mic jack (like Heath) instead of stock single pin and some new
labeling with matching font transfers. The key jack is now headphone.
carrier level is now audio level and carrier balance is now
RF gain (for RX). CW jack is on rear as is 11pin Collins style
connector for external supply.

If any of this sounds familiar, especially the AF/detector/IF/SSB
generator portion, from a published transceiver article or from a
factory built transceiver, please write. This radio is too nice
not to put back in service.

Thank you.

Am I remmbering correctly and the HT-37 was a phasing rig?

If so, then I'm certain there was an article about this years ago. In Ham Radio or CQ, sometime in the sixties. The guy got tired of having to adjust all the controls, so he made it a filter rig. There was even another article about the rig (I can't remember what it modified) but it made mention of the first article.

Sadly, I can't remember the date of the issue. But maybe with this reminder someone will remember the details.

> equipment. I think I had maybe 5 interesting conversations on ham radio.

That's because you failed to ask the right questions - you failed to show the other operators you were interested in conversing with them. Did you ask about their military experience? Did you ask if they had any patents? Their profession? What books they'd recently read? Their thoughts regarding solar or steam power? Chess? Did you try to learn *anything* from and/or about the other fellows? Once you find the what the other person is interested in, you'll gain quite a bit of knowledge in an area that you possibly knew nothing about prior to the QSO.

Look for a speciality net to check into, such as the old Astro-Net which used to be on 3885 kc - amateur astronomers in their backyards all peering at the same celestial body through their telescopes (with a name like Moonman, you would have fit right in...). Call CQ CHESS to hook up with another chess player. Turn down your power to say, 1 W, and try for the Thousand Mile Per Watt award (or the 10,000 MPW award).

Geez, the list is endless. Your problem is that you have no imagination! It's no wonder your QSOs appeared so boring to you; I can imagine how the other fellow felt!

Not just rare... very rare... not many SS models were ever sold during the two years they were produced (late 70's). They were the first 100% 12 VDC solid state " No tune - SWR protected " rigs ever made.

The Japs were only making hybrid transistor/tube - manual tune rigs at the time.

You could have bought a ....

SS-15 (15W PEP) $579
PS-10 PWR SUPPLY $89

-OR-

SS-100 (100W) $699
SS-200 (200W) $779
PS20 PWR SUPPLY..$139

The SS 15-100-200 are the same radios. (only the RF amp attached to the back of the radio is the difference.)

Of course, you could have bought a 500W SWAN 500CX for $529 with another $110 for a power supply or a 260W SWAN 270B for $469 with a built in power supply.

Apparently, not many hams were willing to give up tubes and pay 2X more for a solid state rig.

Too bad, ... as you have discovered... it's an excellent performer. I've had mine for 4 years and will never sell it. I still like my 270B more (only because it's so ugly) but the SS-200 comes a strong second.

From: Scott Gray <comm5@pacbell.net>
Message-ID: <353EB8DD.A8F0097B@pacbell.net>
Source record: 106492

I'm listening to a 10 meter SSB net right now on a Swan 100MXA (Book calls it a 100 MX). Works and sounds great! 80-10
non-warc, single conversion, Analog dial (to 1 kHz) and "preselector" tuning - otherwise "broad band" design. Manual is
copyrighted September 1978 by "SWAN Electronics a subsidiary of Cubic Corporation". Much like the SS-200 best that I can
recall.

Will do very nice as a mobile - bands are up!

I am familiar with the more common SWAN 120 / 240 / 350 / 500/ 700 series tube radios..... Mainstay product line.... Beautiful
Audio on the 500C and 700C !!

Swan kinda faded in and out after the "main" tube line... The Swan 1011 "scandal" that I recall in 1968 seems to have started
things downhill for Swan around that time.... If I recall, QST refused to print any ads for SWAN products until they stopped
producing the 1011 - which was considered a real "slap in the face" to the OT's of that time!

I have seen the SS-200 somewhere in time.....

Anyone know of any "Pages" with Solid State Swan gear???

Does anyone out there have a Drake 2B schematic? I have often wondered how the preselector is made so it can cover such a large frequency range. Does it really tune from 80M to 10M with just one turn of the knob, or does it have switched coils?
Thanks, Gene Martin ex WA6UTN trains4@ibm.net

Hello Bill,

Check all tubes for heater/cathode leakage. This is most easily done by substitution.

Also check all ground lugs that are secured by screws and nuts, and all the screws that hold the various C boards. This is most easily done by loosening the screws a half turn, then retightening.

I recently purchased two nice C-line stations. One of the R-4C receivers has a Sherwood CW filter installed in the CW-1 slot. It is model # CF 2K/16.

I assume that it is a 1.5Khz filter, but it does not say on the filter.

I checked Sherwoods home page, but that style filter is not listed.

Thanks for any assistance.

1144. Lafayette 6m AM tcvr -- (suggestions on repairing?)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-23 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-2304981017080001@cu-dialup-0724.cit.cornell.edu>
Source record: 106364

Anyone out there who has a Lafayette HE-45B? Or perhaps a similar 10,6,or 2 meter am rig? I could use some advice on this thing, before I go nuts.

I am back at this little 6m am rig, trying to make it operational. It is in excellent shape BUT modulation of final is way too low; barely noticeable, in fact. All tubes and voltages check out fine. I have replaced the coupling capacitors in the audio chain, and electrolytics as well. Receiver audio is A-OK. My latest investigations have revealed some discrepancies or questions surrounding the microphone hookup.

What I see in the rig doesn't correspond exactly to Lafayette's schematic:

There are 5 pins on the mic plug. Two are used for the microphone leads, and two for the push-to-talk switch. Nothing unusual there. The 5th pin has *no* connection (according to schematic.)

Problem is, on the JACK, on the rig, all 5 pins have connections to circuitry. The 5th one actually goes to the loudspeaker. So, when the mic plug connects up to the jack, the speaker doesn't end up connecting to *anything.

What gives? They seem to be showing a connection to the plug with no corresponding socket connection(?)?

I'm wondering if (maybe) the speaker lead is supposed to get grounded during TRANSMIT(?) Would this serve to deactivate the speaker? Other similar circuits I have looked at show the speaker arranged so it is disconnected (by relay or switch) during transmit. Whether the Lafayette folks did not see this as a requirement in the HE45B is another question.

Thanks for any suggestions on this. I have found a couple of deviations in the schematic diagram already (compared to the actual wiring), so don't know how reliable it is.

Anyway, thanks very much,

73, JG

I think you are almost right. The electron bombardment produces UV, and
that is responsible for the discoloration. Of course it takes time. Ever
saw the old glass telephone insulators? They are covered with a beautiful
irridescent film from the exposure to the Sun's UV light.

> Thanks, Gene Martin ex WA6UTN trains4@ibm.net

Probably it's bandswitched. I don't know about the 2B, but in a lot of similar rigs you could put them on any segment of the shortwave spectrum (minus some gaps due to IF frequencies and VFOs) as long as you added the required crystal. BUT there were usually restrictions on which socket you put the crystal in. So you couldn't tune 4 to 4.5 MHz by replacing one of the ten meter crystals; you had to put it in one of the sockets for the lower band. The band segment switch would not only select the needed crystal, but put the preselector (and maybe some other coils) into the right segment.

But I thought the preselector circuitry in receivers of that vintage were wider than just for the ham bands. So as you move the bandswitch, you are selecting a rather wide range preselector circuit, that you have to peak to the actual segment that you want to tune.

1150. more Re: Help with Hallicrafters HT-37 transceiver.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-23 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980423124951.22947B-100000@Stratus.CAM.ORG>
Source record: 106370

Unlike the other poster, I think either Bob either doesn't realize
that the HT-37 was a transmitter only, or just wrote transceiver when
he meant transmitter.

The HT-37 was a phasing rig, using a 9MHz IF. In Ham Radio magazine
for November 1969, page 48, there is an article by Milton L. Pockress
(W3CM at the time) entitled "Increased Sideband SUppression for the
HT-37". He got tired of readjusting the phasing stuff, and felt it
lacked sideband suppresion, so he added a crystal filter.

What is interesting is whether others actually copied the article,
or if you happen to have the rig that was modified in the article.

He used a McCoy Silver Sentinal crystal filter ($32,95 back then).
The editor mentions that KVG filters would probably work also;
and eight pole filter for $27.50 and a five pole for $19.95.

The author simply disabled the phasing network by some jumpers
on the pins of the plug in audio phase shift network, and then
put the filter into the circuit. It doesn't really mention at
what point on the schematic, but there is apparently some phono
jacks with a jumper in the correct place, so he just added the
filter there.

He also had to add two crystals for the carrier generator. The original
was on exactly 9MHz, which was not in the right place for the filter.
So he added a three postiion switch to go between lower sideband, upper
sideband and the original 9MHz crystal for AM and CW. He describes adding
the switch to the chassis, and bringing a shaft up through the top of the
case for the knob.

It's actually all quite simple. It seems likely that someone did copy
the article.

Source record: 106384

On the Drake 2-B, the antenna terminal is connected to the primary of the antenna coil. The secondary of the antenna coil and the RF plate coil primary are tuned to resonance on the 40 meter band by the preselecter tuning capacitor.

For the other bands, capacitance or inductance shunts across the antenna coil secondary and the RF plate coil primary, as needed (via bandswitch control), to raise or lower the resonance frequency.

Output of the RF coil secondary is coupled to the grid of the mixer.

I have a Collins 51J-4 manual in very good condition for sale It is the 2nd edition, 30 Sept 1955, with an addenda page dated 15 Dec 1957. It has 4 numbers written at the upper left hand corner in ink, other than that is appears to have had little use. I will mail for $30, email direct if interested, thanks.

1168. FS (ebay): ARC-5 Transmitters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-23 00:00:00 UTC
From: doragsda@polymail.calpoly.edu
Message-ID: <6hnpg3$bt9$1@isnews.csc.calpoly.edu>
Source record: 106388
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have three ARC-5 Transmitters up for sale on ebay.

Units are in very good original condition (one unit has wires soldered into the connector).

See pictures at:

ARC-5 / T-20: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=11893790

ARC-5 / T-21: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=11893978

ARC-5 / T-22: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=11894255

Thanks.

1169. Is the TRC-75 and MRC-117 same?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-23 00:00:00 UTC
From: Jim Warner <jimwcuda@tbcnet.com>
Message-ID: <01bd596a$c6d9a640$46e170cf@home>
Source record: 106495

I worked on some old Collins radio set in the service that sure looks alot like the TRC-75
parts in Fair Radio's catalog. The MRC-117 was aledged to be an aircraft radio set that
was converted to vehicular use. I remember there being a transmitter, receiver, and 2
automatic antenna couplers. The control head was remoted to the back seat of a 1971
vintage Dodge Powerwagon crewcab truck. There was 2- 32' fiberglass sectional
antenna'a which attached to the cabinet which housed the radio components. They
extended through 2 holes cut in a topper over the pick-up bed. The control head
actually had 2 control heads. 2 separate freqs could be dialed up, with an F1/F2 selector
to choose between which freq you wanted to use. I operated and maintained this stuff
in Germany in the late 70's. We used them on the EUSCOM hf network. I always got
in trouble because one channel on my truck was stuck on 20 meters working stateside
all the time during preventative maint checks.
Anybody remember these elusive animals?

Bravo, and thanks. By courteously including FA or ebay in the subject
line, you allow those who choose to not read to easily filter out such
messages. I hope that others will follow your example. Thanks again,
Dave.

Wow! That is some rig you have there, Bob. The McCoy Silver Sentry
and Golden Guardian 9 mHz crystal filters were very good items. I
bought one with the idea of doing something like the previous owner of
your HT-37 did. . .although I never dreamed of adding a receiver too.
I'm pretty sure that I would have zeroed in on an article that did all
of that if it had been published in QST, 73 or Ham Radio. My guess is
that you need to go back to the source of the gear if possible.
Hopefully, the previous owner kept notes on his work and that he is
still amongst us somewhere. Hope you get it working. It would be a
very neat thing to own and operate, even if you have to reverse
engineer the circuit. Sorry I can't be of more help. Good luck on
your project.

Message-ID: <01bd6e6f$1c5b1b80$3506a3cd@bwallace.cts.com>
Source record: 106502

Mike is correct.

First ensure that the receiver is configured properly for the alignment.

Make sure that you have the VTVM connected to connection of L8-C44/Ground
and signal generator connected to C28-T5/Ground.

Measure the 60 KHz signal generator output with a good freq counter. I
like to keep a freq counter in parallel with the signal gen output to keep
the freq accurate.

Make sure unmodulated and adjust the transformers in order given.

Keep the VTVM reading under -5 volts (this is very important).

You should be fine if you follow this.

Source record: 106310

Nice cond. 75A-2 with lots of extras. This has a reduction spinner knob,xtal calibrator (not original) and some "factory looking" mods....it has xtal filters (not mech.ones)for am,ssb,and cw,AVC control i.e. off,slow, & fast,and the front panel has been re-silk screened and these look like factory installed mods. The BFO now reads +1,-1, & cw....looks kindda like a A4. It plays but audio seems a little weak and the dial needs to be restrung. Also it's missing the window on the drum...could be inside the radio. Price is $325.00 + shipping

75A3 in good shape...about a 7+ or 8. Has the 3.1 mech.filter and a "band-pass" on the other filter spot. Have a copy of the manual. Plays good. $350.00 + shipping

you certainly need to study the circuit diagram, I am surprised why you
replied at all when you actually have no idea at all how the 2-B works!

It covers the following switched ranges:
A 3.5- 5.0 MHz (80m)
B 5.0-10.0 MHz (40m)
C 10.0-16.5MHz (20m)
D 16.5-24MHz (15m)
E 24.0-30MHz (10m)

See page 12 in instruction book: 11.0MHz xtal covers the ranges
6.9-7.5MHz and 14.5-15.1MHz

Michael-

Thanks for the info. It may help get me on track.

However, this is a HT-37 which has been converted into a transceiver. It is not a hack job either. It's a well engineered and neatly done conversion. I posted some details the other day.If you missed, I can send them.

For all the skeptics. Let's see some $ on the table. I'm taking bets. Will put up photos to prove assertation and hopefully, and more important to me, find someone who knows who did this beautiful work.

No wimpy bets either. Minimum ante is $1K or a Drake R7A.

I have the following power tubes for sale. I know what they sell for new, but I am entertaining offers. Make me an fair offer.

Qty. of 2 Eimac 100th in factory boxes, 1 sealed box, opened other to verify content. New old stock.

Qty. of 2 Eimac 4-65A in sealed factory boxes. New old stock.

Qty. of 1 Eimac 4-1000A, appears to be new and unused, no splatter, discoloration, etc.

Qty. of 1 Eimac 4-1000A, a few faint stains on the glass, no splatter, etc. Looks almost as good as the one above.

Qty. of 1 Eimac 3-1000A, appears to be new and unused, no splatter, discoloration, et.

Qty. of 2 United 805, in factory boxes. New old stock.

Qty. of 1 Eimac 4X250B, in sealed plastic pouch. New old stock.

Also have a Jennings UCS-500 10KV vacumn variable, appears to have never been mounted, make offer.

I'm not selling this stuff to put food on the table, so if you are interested, make me a fair offer. I want to be fair to you and me. Email direct if interested, thanks.

John N0EE

1195. Icom traded- Thanks

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-24 00:00:00 UTC
From: KB4AEP <crslex@iglou.com>
Message-ID: <354121A4.54C1@iglou.com>
Source record: 106321

This Icom has been traded. Thanks to all who responded.
KB4AEP

Trade: Icom IC-701 solid-state digital 160-10M HF transceiver w/dual VFO's and matching PS-701 Power Supply /speaker.

Icom's first HF transceiver. The transceiver drifts pretty bad for about the first half hour, then stablizes. Other than that, It works great! I figure the caps in the PLL are getting old and tired. Radio is in excellent cosmetic condition with full output. Includes Icom hand mike + manual. Power supply is in real good shape with only a few scratches on top.

Trade for:
Kenwood TS-520 or 520S, Kenwood Twins (R-599D +T599D)
Tempo 2020 in good working and looking condition
Blackface Tempo One+PS/SPKR (MUST BE in MINT CONDITION)!
Drake B-Line in very good condition
Yaesu FT-401B, FT-101, B, E, EE, F, or ZD
or what do you have?

Must be working with full output. Manual and schematic also.
(NO SWAN OR HEATHKIT PLEASE!)

Or sell IC-701/PS-701 for $300 + shipping

I'm near Lexington, Ky.

E-mail me KB4AEP at KB4AEP@juno.com or crslex@iglou.com
or call 502-863-0500 evenings and weekends
Thanks. Mark

The 392 was, I believe, their last receiver and the best. It is
extremly rare. They are both fine radios and will be an excellent
investment.
TMC made very fine equipment at high prices.

Bill, Here is one method: Any good motor repair shop will carry AC
"starting" capacitors. I put one in my Ham IV and it works fine. The one
I have is larger than the original which creates installation problems, but
it can be done.

Regards

Russ

Hey Guy!

If you're interested in T.M.C., ya outta spell it right!
It's the Technical Materiel Corp.

Webster's : materiel = arms or supplies for war

:-)

(former owner of 4 T.M.C. GPT-750 xmtrs
and one SBT-1A xmtr. - then sanity struck and I got rid of the
stuff).

1223. Found New Free Alternative to Ebay if You Buy or Sell

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-25 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6hsqrb$qu7$1@nnrp1.dejanews.com>
Source record: 106259

Found a free "New kid on the block" alternative to ebay if you wish to sell at auction. it will take time before it gets the high volume of bidders & sellers that ebay does, but we should know our alternatives.

I tried posting on it. It seems to work. A warning, when you post on it, after preview, you have to hit the submit button. I found that I had to hit the "back" button on my browser and submit preview again, before I saw my photo come up. Good luck in whatever you're selling.

Hi Everybody,

I have some vintage audio gear, that I would like to trade for a collins

s line, here is the stuff i want to trade:

Thorens TD 124 Turntable, with shure tone arm, Fisher FM 1000 Tuner,

Fisher X1000 amplifier, Both items are all tubes, and amplifier is rated

at 50 watts per channel rms I have wood cabinets for both tuner and amp,

plus owner manuals and service manual for tuner and amp. rates an 8 on

scale of 1-10 and is all working equipment.

I would like to trade this stuff for Collins S line in same condition,

If interested please e-mail me at samtone@pacbell.net

Thanks a bunch,

Tony

> What happened to the company??
> Track record of their products??

Yes, and yes. More than one person has suggested the GPR-90 was really rather pedestrian as receivers go. The GPR-92 was the high-end receiver in this particular series.

TMC primarily produced equipment for the government/military market. Much of it was excellent stuff, and all of it was expensive. They used to advertise their commercial/military cross equipment in the ham mags, but the last I was able to find while doing a recent search was in 1969.

I have two pieces of TMC equipment. One is the common CV-591A SSB adapter. The other a very uncommon (and early solid state) dual diversity synthesized receiver called the DDRR-10 which sold commercially in the late 60's early 70's for about $20K. The version I have was a Navy military version called an AN/URR-64(v). Never seen or heard of another one, anywhere. Weighs in at around 900 lbs in a seven foot rack cabint :-)

Don't know if they are around any more or not.

Source record: 106271

Brown Bros. Machine Co. Paddle/Keys. I have one Model CTL and one Model CTL-B for sale. These legendary precision-made units both feature a twin-lever keyer paddle and a heavy-duty straight key on the same base. They have become collectors' items.

The frame and base of both units are finished in baked black wrinkle enamel. The mechanisms are in perfect condition. The bases show some wear, with chips in the enamel finish, mainly along the edges. The CTL has just a few chips; the CTL-B has more chips.

The Model CTL is $200. The Model CTL-B is $190. Add $10 shipping/insurance for each unit.

Please e-mail: jeff@detray.com or phone: 603-242-7995. Jeff NK1F.

From: jeffreyh@Hawaii.Edu
Message-ID: <6hrffc$co2@news.Hawaii.Edu>
Source record: 106284

Forwarded to this NG from the BA email list // Jeff KH2PZ

From: Bengt Wilander
Subject: Alexanderson Alternator

I just like to confirm information given by
Lawrence R. Wells 15 april 1998 here on
the BA-list, about coming transmission of the
Alexanderson Alternator from Grimeton in
Sweden.

On 28th of May 1998 at a special ceremony at
Grimeton, County Governor Karin Starrin will
present an award to the Long wave station at
Grimeton for Industrial Heritage of the year 1997.

The ceromony begins at 0900Z and when it is finished
the transmitter will be started and used for
communication.

The CW-message will start around 0910Z and have a
duration of about 30 minutes. The same message will
be repeated 3 times.

Another transmission is planned to go on the air at
1500Z the same day. Probably same message again.

The callsign is SAQ and the QRG 17.2 kHz.

According to the Station manager Bengt Dagas there is
no transmission planned for the EDXC-meeting in August
just a visit to the station.

If there are any interest for the SAQ transmission I will try
to make an update later on to report on any schedule changes.

The address for Grimeton is: http://www.telemuseum.se/Grimeton/

I have an Heathkit SB-100 including matching speaker, plus the HP23 power supply for sale.
Good news first, the radio is in excellent shape. Very clean undented and virtually scratch free. All tubes checked 4/25/98 and check OK. 2 new 6146 finals installed. Great piece for your SB collection including original manuals for both. Built in October 1966.
Now the rest of the story. It receives but does not transmit. I purchased it in this condition but can't find the time to do the repair. So I will sell it for what I paid. $185 shipped lower 48.

Jpeg on web page at: http://www/ccnet.com/~friday/SB100.htm

Also avaliable, HQ129X excellent condition w/ W7FG repro manual $185 shipped.

I could use some help with my recently acquired Heathkit HX-11 CW transmitter. Everything seems to be in order and I am in need of some simple instructions on how to use the various knobs on the front panel to prepare the unit for CW transmission. Apparently the HX-11 is very similar to the DX-20. I have no VFO but do have one crystal for 7475 KC. I am planning on purchasing a crystal from Bomar to get to a frequency within the ham bands prior to switching out my dummy load antenna. I am also wondering if with one crystal I can transmit on more than one band (for instance by multiples of crystal freq). Any info can be sent directly to me and will be appreciated. My e-mail address is

billbird@mo.net

I am anxious to get one the air with this transmitter and am hopeful I can avoid having to order the manual for now. Thanks and 73.

Bill

Hi everybody,

Tank you fer reading.

I have recently purchased a vintage crystal set. Looking at the used materials etc it should be from the 1920's.

I would like to know some more abt this set because the nameplate or brandname is missing and I don't understand the fact that there are two identical detectors on the front.

Can anybody inhere give me advice on the group I should post?

Kind Regards,

Peter, PA3GQD

Anyone contemplating buying one of these, be forwarned that they commonly develop intermittants, caused by the fact that TMC used rivets on the ground connections on the set's terminal strips & tube sockets. After all these years since this receiver was built, the condition is probably worse. The radios are very well designed, & the repair is simple, if only time-consuming: using a heavy soldering iron, flow solder on all riveted grounds. This takes about 2 hours work, & is well worth it. I did this to my '90, & it made all the difference in the world, especially if the receiver you buy has been sitting in an attic or basement for years, & not turned on.

Bill Edwards, at Omega Electronics, has worked on many of my rigs and has completely rebuilt a LK 800 for me. Top quality workmanship. I recommend him highly. John W4WAW

1286. Help with MLA-2500

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-26 00:00:00 UTC
From: Tom Ostby <ostby@ix.netcom.com>
Message-ID: <3543396E.BDD665FF@ix.netcom.com>
Source record: 106211

Thanks for reading this;

I bought an old Dentron MLA-2500 through the internet several months ago, and have now got the shack together and on the air.

What I have found is that I get around 4-500 watts out (via the built in wattmeter) with 35-45 watts drive, all bands into a dummy load.

Now the problem is that grid current is around 180-200ma, and the plate is .8amp or more with the amp tuned properly. With 45 watts drive the plate is off the scale. I really don't want to fry the filiments.

I don't know if I have a bad tube or what.

I have heard that the amp can run on one tube. Any comments on this? I would like to rule out a bad tube if I can.

Other than that the amp runs fine, with good comments on the air.

If I can't solve the problem easily, I will sell it for $250 without the tubes, or $350 as is. I don't have the time to trouble shoot the amp.

Thanks in advance

Tom Ostby

From: ed@juge.com
Message-ID: <6hvk2b$jv7$1@nnrp1.dejanews.com>
Source record: 106216

I have a mint KWM-2 in need of repair and alignment. Declining eyesight and lack of test equipment dicatates having it done commercially.

There are a half-dozen folks around the country who do Collins restoration and repair but I know nothing about any of them. I would like to hear from some of you who have used them. Which ones really know their stuff, and hopefully won't charge me twice what the radio is worth, and which --if any-- should I avoid?

Thanks...

Ed, W5EJ

Message-ID: <1998042619450100.PAA14577@ladder01.news.aol.com>
Source record: 106227

I could use some help with my recently acquired Heathkit HX-11 CW transmitter. Everything seems to be in order and I am in need of some simple instructions on how to use the various knobs on the front panel to prepare the unit for CW transmission. Apparently the HX-11 is very similar to the DX-20. I have no VFO but do have one crystal for 7475 KC. I am planning on purchasing a crystal from Bomar to get to a frequency within the ham bands prior to switching out my dummy load antenna. I am also wondering if with one crystal I can transmit on more than one band (for instance by multiples of crystal freq). Any info can be sent directly to me and will be appreciated. My e-mail address is

billbird@mo.net

I am anxious to get one the air with this transmitter and am hopeful I can avoid having to order the manual for now. Thanks and 73.

Bill

> At a Pep Boys, you can get a 300W inverter and car battery charger for
> $110, and a reconditioned battery for $27 without a trade-in. ...{snip}

I'm missing something here: While I understand your desire to build something - this doesn't make much sense... Mac Zone (PC Zone) has APC UPS's for less than what you propose to spend - and they are already built, (i.e. have the high speed cutover relays, etc.); are smaller, lighter, etc.

For instance: APC 280 UPS: $95.00 --- APC 400 UPS: $139.98. The APC 600 UPS is only $219..

You would probably think a car battery would last a lot longer than the smaller batteries in these units - and to a point - they do -- but not as much as you might think: 1) most static inverters are designed for 12V - i.e. they run fine between a batteries "float" level of 14.2V or so and something just under 12V - then they shut down. 2) most ups's are designed for pure "battery" source - and often can supply full power down to near 60% of the batteries "normal" potential. The problem here is that car batteries aren't designed for such use (called deep cycling) and it very much shortens their life. So you need to buy a "deep cycle" battery - which isn't going to be $27 without trade-in... and 3) the power draw on 12V is incredible - that's why most UPS's (esp. higher power units) run from 24 or 48Volts: At 1000 Watts AC out - the draw on a 12V battery is near 100 Amps... as most batteries in really good shape have a hard time holding anywhere near 12V for much over 10 minutes at that load... you can see the problem.

We've got a powerful UPS here that _does_ use car type batteries... but there is a huge difference: it's powered by 10 12 Volt batteries in series - that's 120V DC into the inverter - and obviously - the current / drain is 1/10 of the same power drawn from a single 12V battery... so we can pull 2000- 2500W for an hour or so without runnning the batteries into the dirt (about like leaving your headlights on).

just my .02....

I would like to apologise for my recent posting on the All Collins R390A. I negotiated a deal with Matt, KE6OUS for the radio pending a bench check out and when I opened up the unit I found that most of the internals were EAC and not Collins. At this point I am not even sure of the frame. In any case I sent an email to Matt and am withdrawing the earlier post. Back to the drawing board on this one. I should know better than to just look at data plates.

Is your power supply to the Amp heavy enough
figure on at least 12 to 15 amps at 220 VAC
or 30 Amps at 110 VAC - a high voltage drop
on the unit may cause simalar problems

How are you tuning the Amp... ???

Are you tuning for dip in plate current ???

Then adjusting load for max out and then redipping plate ???

Check if plate dips at more than 1 setting

only 400 W out and high plate sounds like its way out of tune or a
gassy tube preventing tune up

These amps usualy produce

Is the ALC circuit adjusted for your rig.

Also check the plate blocking cap might be faulty? (

***** DON'T PANIC!!!! *****

***** READ ENTIRE MESSAGE FIRST!!!! *****

The following message is an announcement of a 30-day discussion period on news.groups to precede a non-binding opinion poll which, depending on the results, MAY lead to a formal Request for Discussion (RFD) to reorganize the rec.radio.amateur.* newsgroups. NO VOTES ARE BEING TAKEN AT THIS TIME, and any binding vote that affects the rec.radio.amateur.* newsgroups will not occur for many months into the future, if at all. Please read the entire announcement carefully before replying or following up.

rec.radio.amateur.* Vote of Confidence

Contents:

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others. What should I do?
Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which initiated the last major reorganization in 1993) is the point-of-contact

for questions about this proposed opinion poll. Principal members are Paul W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg member, Gary Coffman, KE4ZV, also endorses this proposed opinion poll. The proposed opinion poll will be conducted by an unbiased third party from the Usenet Volunteer Votetakers (UVV), Jeremy Billones (billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this proposed opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborous and time-consuming, and perhaps unnecessary), we propose to conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV) with an RFD and Call For Votes (CFV) period. During the RFD, we have discussion pro and con about each newsgroup and its charter. During the CFV, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I believe that this newsgroup's existence or its charter should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If the proposed opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, the proposed opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this proposed opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this proposed opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today
at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this proposed opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)

rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are principally used by readers of rec.radio.amateur.*, and their fates would substantially be decided by any significant reorganization of the rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.* reorganization, rec.radio.cb is not included in this proposed opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups (except for rec.radio.broadcasting and rec.radio.info, which are moderated). In addition, the following individuals were consulted prior to this announcement (note that consultation does not necessarily imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization, former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Express your opinions on news.groups (the default followup newsgroup for this message) and vote "YES" for all of the existing rec.radio.amateur.* newsgroups when the proposed opinion poll occurs (in 30 days time).

Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?

Express your opinions on news.groups, and vote "NO" for all (or all but one) of the newsgroups when the proposed opinion poll occurs.

Q: I support some of the newsgroups for amateur radio, but not others. What should I do?

Express your opinions on news.groups, vote "YES" for any newsgroups that you wish to remain unchanged, and vote "NO" for any newsgroup you wish to have reconsidered in a future RFD/CFV when the proposed opinion poll occurs.

Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?

Since the proposed opinion poll is for both the existence of given newsgroups AND their current charters, you should express your opinions on news.groups and vote "NO" for that newsgroup when the proposed opinion poll occurs. Again, this is a non-binding opinion poll simply to determine if current newsgroups should be considered for modification or deletion, not a vote to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by this proposed opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups on news.groups.

Q: I have no opinion, what should I do?

You may wish to read the following 30 days of public discussion on news.groups about this proposed opinion poll to develop your own opinions. Discussing your resulting opinions on news.groups may help further develop your opinions, or those of others.

If, after reading and participating in the public discussion, you still remain undecided, you may choose to abstain from the proposed opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups when the proposed opinion poll occurs.

Watch for an announcement of the STRAW POLL (CFV) in about 30 days. Questions to rra-wg@theporch.com.

1326. R390a problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-26 00:00:00 UTC
From: Matt Parkinson <mattradi@earthlink.net>
Message-ID: <35441451.8E4486BC@earthlink.net>
Source record: 106251

This is an up date on a R390a project.I had problems with the RF deck it was dead. Now the deck is working on 8MHZ and above to 32 MHZ. Below 7 is dead. I pump a signal (RF) and can drive it from the plate of the fisrt RF tube and everything is fine put on the grid and nothing works.Check the voltage on all pins and everthing apprears to be fine.Iam not sure how that could be. I suspect something wrong in the RF transformers but from 0 to 7MHZ that is a tuft one to figure. I guess maybe one is shorted But with one switch controlling each band how can that be any Ideas out? I am going to start take these first RF transformer out one at a time for a quick check to see if that is the problem. I have check the band switch until I am blue in the face. I have another RF deck to compare to so far no help. Thanks Matt Parkinson. KE6OUS 73s

Hello and thanks for reading this message. I have a NON working, basic FT-102 for sale. The rig is complete with all tubes, original knobs, and owners manual. The display lights up and I get a very weak marker signal on receive, but have not tried to xmit. There does not appear to be anything burned or smoked. I don't have the equipment or expertise to troubleshoot this rig. I am asking $200 plus shipping. I also have a SP-102P matching speaker that I would sell for $50 plus shipping. The rig and speaker are probably a 7 on a scale of 1 - 10. Thanks again, Markus.

1330. WTB: 7 pin Viking Mobile connector

I discovered that you can build a very powerful uninterruptible power supply for less than $150. How would you like a 300W/1kWh UPS for that price? I'm building a unit like that, using automotive technology off-the-shelf.

At a Pep Boys, you can get a 300W inverter and car battery charger for $110, and a reconditioned battery for $27 without a trade-in. The last component is relays, which you can get easally enough. The design is like this:

During normal conditions, house current goes to the device in question (Like a file server) and the battery is on trickle-charge. When the blackout occurs, the battery is unconnected from the charger, and connected to the inverter AND the load (file server in the example) is connected to the inverter.

Of course, there's a very brief period of no electricity, which the file server can normally handle. An obvious refinement would be a 12V supply that can run the inverter and charge the battery at the same time, and the load remains on the inverter. Designing a UPS like that with off-the-shelf stuff costs more, of course.

I havn't gotten the relays for my pet UPS project yet. What would be really interesting would be a UPS that could run a whole apartment using technology like this. As far as inverters, the only way I'd know how to design one would be to have 2 car batteries in series and the paralleled power transistors feeding a transformer, using some kind of motor-driven device as the "oscillator". Such an inverter would be needed for large loads like an air conditioner. The currently available inverters can't handle a load that large "off the shelf".

I live in a place subject to frequent power outages, enough to make me paranoid about having food in the refrigerator. (I have anxieties, I admit.) Does anyone know how to parallel TO-3 case power transistors? I'll provide the motor-driven "oscillator" for the large loads. The motor-driven "oscillator" will prove to be a fun project in itself!

JDM (N0EE) wrote:

>I have an RME model 8779 (?) audio frequency phase shift network. Is
>this a product detector or what, any idea what radio it is used in?

It's a precision network of resistors and capacitors, designed to split an audio signal into two audio signals 90 degrees apart, OR, combine two audio signals 90 degrees apart into a single audio signal.

These networks were made by several manufacturers, such as RME, Millen and B&W. The B&W 2Q4/350 is the best known unit in ham circles - it looks just like a metal tube. The parts inside were usually hand selected for exact value.

These networks were used in phasing type SSB exciters, and also in "signal slicers" like the RME 4301. A signal slicer is a form of detector that achieves rejection of the unwanted sideband by the phasing method - sort of like a phasing exciter working backwards. They were built as accessories to receivers without good SSB filters.

The main troubles with the phasing method are two: First, even with precision components and careful adjustment, it's hard to get more than 40 db unwanted sideband rejection, due to phase errors.. Second, the slightest drift in the components upsets the rejection, and readjustment is necessary. In transmitters, 40 db unwanted sideband rejection is OK, but in receivers, a lot more is needed.

I believe that the Technical Materiel Corp. shut down around 1992.
I was on their catalog mailing list due to involvment in marine coast
station operation. In 1985 I was given a tour of their factory on
Fenimore Road in Mamaroneck, New York. Their sales manager/
chief engineer Ed Miller was a gracious host.

They were down to a skeleton work force - eeking out an existance
doing contract refurbishing of thier older transmitters such as the
GPT-750 and the GPT10K, etc. As a matter of fact, I sold a battered
GPT-750 back to them since they desperately needed a final amp

filament transformer for a refurbishment job and didn't have one in stock.

I was interested in buying three new 1KW xmtrs for HF and MF marine operation but at T.M.C.'s price of $17,000/ea - it just wasn't feasible. Other suppliers had similar units for around $10k/ea.

Several employees were however, building a new 10 kw xmtr (HFT-10K) and others were assembling receiver multicoupler units (used to connect several receivers to one antenna).

The rise of satellite communications and the decline of HF point-to-point communications eventually doomed the company.

Since T.M.C. was a privately held, family owned company, I don't believe that they actually went bankrupt. They slowly declined and finally closed the doors gracefully.

Doug

>Nope... He is correct. You can get WWV as an image on 40 meters.

sorry, I did not care to comment on 'image frequency' - I commented on
how it is designed to cover the ranges.

One have to take one argument at the time, it is bad enought that you
make some mystery out of what is inside the receiver, the two receivers
are made just according to the manuals (Serial Numbers: 10439 and
82448.), and either manuals are identical.

Yes, you can get WWV on 15MHz with the '40m' xtal, as I mentioned above

Have Siltronix 1011C.
Want Satellite weather receiver or will sell.

Works.

Have made no attempt at clean up and readio
looks pretty good. Could use a little touch up paint
on Chassis bottom plate where it wraps around just
under function switch.

JPEG

There was a factory grid metering mod kit that came out for this unit. You might check and see it this was accomplished. However, your problem(s) seem to transcend this simple mod. I don't have mine anymore so I can't check the book. BTW, mine put ot an easy one KW.

1358. Need Info on late model Tempo One

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-27 00:00:00 UTC
From: "David W. Fleming" <davefleming@novagate.com>
Message-ID: <6i217jkrb0@205.138.137.166>
Source record: 106166

Have recently acquired a Henry Radio (Yaesu) Tempo One (Black Face)
transciever via this medium, and need some help with a couple of items.
The original balanced modulator was a single 7360 Tube (V107) and is now
replace witha solid state module, and that is shown on the schematic with
the rig.
Trouble I am having is frequency drift only on transmit. The VFO voltages
are rock stable, but I get a drifting CW note that starts out at the same
point each time the rig gets keys, and if held down, the frequency drifts
rapidly up in frequency. Immediately on release of the key or tune position
returns the radio to the starting point again.
It's kind of fun to get into these old rigs again, as it's been since 1975
since I've owned one of these.
Anybody have any hints?
Thanks,
73's,
David Fleming

PRICE REDUCED TO $135 for SB100 shipped
PRICE REDUCED TO $150 for HQ129X shipped
BOTH for $275
(Original posting below)

I have an Heathkit SB-100 including matching speaker, plus the HP23 power supply for sale.
Good news first, the radio is in excellent shape. Very clean undented and virtually scratch free. All tubes checked 4/25/98 and check OK. 2 NEW 6146 finals installed. Great piece for your SB collection including

original manuals for both. Built in October 1966.
Now the rest of the story. It receives but does not transmit. I purchased it in this condition but can't find the time to do the repair. So I will sell it for what I paid. $185 shipped lower 48.

Jpeg on web page at: http://www.ccnet.com/~friday/SB100.htm

Also avaliable, HQ129X excellent condition w/ W7FG repro manual $185 shipped.

It sounds like the carrier oscillator may be unstable. Some rigs of
that era used a separate carrier oscillator crystal for CW, USB, and
LSB because of the different offset required for each mode. I'd look
at the CW carrier oscillator with a counter and see what it's doing.
Is the rig stable in USB and LSB modes? If so, then it sounds even
more like a bad CW crystal in the carrier oscillator.

It is indeed fun to tinker with the older gear! :)

Good luck!

Dean - K5DH

1369. EBAY and this News group

Newsgroup: rec.radio.amateur.boatanchors

NAVEDTRA 20232-b Cryptologic Tech M 3 & 2 has the R-390A/URR on pages 92
to100

Figure 4-10 , the block diagram shows that if you are dead below 08.000 MHz
the following path has a problem

1st crystal oscillator V207 5654/ 6ak5w
1st mixer V202 6C4
tuned circuits Z 213

for 8-32 MHZ the signal path skips the above circuits

Nope--this discoloration is caused by electrons that MISS hitting the
anode, and strike the inside of the envelope instead.

1384. CORRECTION: Send STRAW POLL Discussion to rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-27 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <6i32lhioj1@newscene.newscene.com>
Source record: 106192
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

Based on thoughtful feedback from Kathy Pascoe (kpascoe@ford.com) and Yves Belleveuille (yan@storm.ca) on news.groups, I've come to the conclusion that rec.radio.amateur.misc would be a better followup target for this straw poll discussion.

I sent the original copy (complete with exact headers) to several experts, including past newsgroup proponents and our volunteer UVV votetaker for review a week prior to posting, but unfortunately no one (including me) noticed that a followup to news.groups might generate controversy. As helpful as the standard FAQ documents on newsgroup creation were, they weren't (in my opinion, at least) sufficiently clear regarding the inadvisability of conducting informal meta-discussion on news.groups. It's also sometimes hard to figure out what's appropriate on what newsgroup by observing others. According to Kathy and Yves, news.groups is an appropriate target for discussion in response to a formal Usenet Request for Discussion (RFD), but informal pre-RFD discussion (including straw polls) should probably be conducted in an appropriate home newsgroup.

Since more than one person has offered this feedback, and in a thoughtful and convincing manner, I'm posting this correction, and asking that followup discussion on this straw poll (which should commence, as scheduled, in 30 days time), go to rec.radio.amateur.misc.

David L. Thompson wrote:
>
> The best approach is to prohibit EBAY references on this newsgroup.

If you desire to prohibit Ebay postings,
which are legitimate "For Sale" postings
using a socially accepted means known as
an "auction", then you're going to have to
file to change the charter of the group, which
will require a formal application and vote.

It isn't worth the trouble. Those of us who
post for Ebay are, for the most part, using
"FA" as a marker in the listing titles.
Just set up your filters or- better yet-
don't read them!

As for those who can't go to web pages...
Whom is at fault for that?? I can't go
up to Ohio and shop at Fair Radio. Does
that mean I should prohibit everyone
else from doing so?

Don't try to punish mature adults who want
to participate in the great Free Market and
get a crack at good radios.

The motives of those few people crying and pewling
about auctions are extremely suspect.
That's putting it nicely.

If you don't like it.... don't read it.

There are two kinds of people:
Those who get "in the arena" and
strive for what they want,
and those who stand outside whining.
Which are you?

Well put! I have sold a couple items on eBay and those who bid mostly bid because they happened to see my ad on the newsgroups. Not only does posting eBay ad references on the newsgroups help us sell our items, it helps those who don't have time to scroll through everything on eBay and those who don't even know eBay exists. I could go on with the benefits, but I hope a few people who thought otherwise might change their minds.

Message-ID: <35452C66.8C5E49C0@oeminc.com>
Source record: 106201

Dear Group Members;

This squabble over Ebay postings looks to me like a Tempest in a Teapot. Lately I've had to click past more arguments about the pros and cons of Ebay postings than the dreaded FS Ebay postings themselves.

Personally I find the FS Ebay postings less annoying FS postings with no price. Are these not auctions too? If the same rules are applied to both cases, FA would be an appropriate prefix. Since I control my own cursor, I'll just skip all FA postings and remain a happy lurker and occasional participant in this news group.

May differences of opinion be tolerated in the interest of the free exchange of ideas in this forum. (Reminder to self -- do not stumble and fall while mounting or descending from the soap box.)

Long live the Boatanchors news group!

Brad Whiting

Source record: 106206

Hello,
I am new to this NG but not to NG's in general. I am getting back to
Ammature Radio after being away for ten years. I am looking for a
resonably priced Reciever (no TX). Freq's from .1-10Mhz (min) to
1.3-1.5Ghz (max) also this unit must be able to run from a car if
possible. If it can't I'll work with a dc to ac convertor. The unit
doen't need to be "new". Something from 89' to pressnt would be good.
Also would need an appropriate antenna for the rig.
Thank you for the help

Well, I did it,

I was transferring my Super Skyrider from the trunk of my car to a friend's car. He is going to help me with the restoration. I dropped it right on the parking lot pavement, and it landed on its face.

One of the tuning knobs broke. It is a couple inches across and has the appearance of a little steering wheel.

Anybody got anything like that or know where I might find one?

Hello out there,

I have an old Palomar 300A amplifier and I need some parts for it to get it going. It has been in the closet for years and all I need is a junker 300A that has the plug in relay board. This board has the receiver amplifier and the switching circuit. I posted that article and got a junker and would you know that is has a different board in it. Also would you know I got to working haha. But it still leaves the old one I have sitting here to be repaired.
Anybody having one please email me at bierbier@bellsouth.net.
Remember, it is the one with the plug in board I need. Thanks!!!!

From: n2ey@aol.com
Message-ID: <1998042823494900.TAA08163@ladder03.news.aol.com>
Source record: 106063

Hello Jordan,

From the 1948 ARRL Radio Amateur's Handbook:

"CCO - Crystal Controlled Oscillator - Model 2A

For 2 - 6 - 10 - 11 Meters

With this basic oscillator, employing a 6AG7 tube, the advantages of VHF crystal control are easily achieved. Has direct output on 6 - 10 -11 meters and ample output to drive tripler stage on 2 meters. Single tuning control, bandswitch and crystal socket mounted on outside of painted metal subchassis with power and output terminals at back. Uses Bliley AX2 20 meter crystals on 10 and 11 meters, new Bliley AX3 crystals for 6 and 2 meter operation. Ideal as nucleus for new construction or conversion of existing equipment.

Supplied less tube and crystal - $9.95"

The 20 meter AX2 crystals were fundamental types in the 14 Mc. range. The AX3 crystals were third overtone types in the 24 - 25,5 Mc. range.

11 meters was a hamband then.

1418. Old Vibroplex Bug - "Original" Standard On eBay

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-28 00:00:00 UTC
From: k2ok@ntr.net
Message-ID: <6i3amv$g9b$1@camel18.mindspring.com>
Source record: 106111
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.morse,rec.antiques.radio+phono

This old Vibroplex "BUG" Morse Key is in Excellent condition. Name plate says: THE VIBROPLEX COMPANY, INC. 833 BROADWAY, NEW YORK, NY and has the serial number 179168. On the bottom it says "ORIGINAL" Standard. I was told this was from the early 1950's. It seems to work perfectly, is complete and all original. It is in excellent condition with just one or two spots where the black crackle finish is worn thin on the base.

Check it out and see Picture on eBay at:

Don:
It doesn't take smarts.
I've been fixing radios for 25 years, and a garbage man
in an inner city ghetto makes more money and has better benefits.
So just how smart can we radio fixers be??

My dear old daddy told me something when I was 18 years old.
He said:
"Son, you're old enough to make your own decisions about your life now.
There are only two things I'll ask you not to do.
The first is become a radio technician.
The second is to become a piano-player in a whore house.
But if you get in a bind and you must do one or the other,
PLAY THE DAMN PIANO!"

I laughed,....then.

Dave Stinson AB5S
arc5@ix.netcom.com

Says "FOR SALE" not "For Auction". As a matter of fact, I can't find a single instance where you used the obscure "FA" in a subject line and only two items where you mentioned "eBay" in the subject line of a rec.radio.whatever "for auction" post..

>Don't try to punish mature adults who want
>to participate in the great Free Market and
>get a crack at good radios.

If they wanted to participate in the "great Free Market", why are they bothering with the lowly newsgroups in the first place?
Could it be because the newsgroups are the great free market and eBay is nothing more than a cumbersome, slow-motion auction? I have never been to a real auction that lasted more than 10 minutes/item. eBay auctions can last 10 days!!

And, the 1981 Heathkit Christmas catalog you had up for auction is a radio? I can't understand why you didn't advertise that one on the newsgroups!! HOT!

>The motives of those few people crying and pewling
>about auctions are extremely suspect.
>That's putting it nicely.

If I wanted to bid on stuff on eBay, I would go to eBay in the first place!! If you want to hold an auction, fine. Hold one. Heck, hold fifty. But, with all of your confidence in the "great Free Market", why advertise them on the newsgroups??!! However, as soon as newsgroups postings can be advertised on eBay, there may be a ground swell of support for eBay ads here!

Next thing, you'll be out nailing eBay signs on trees and utility poles!!

And, please, don't hit us with that tired old stealing from widows, orphans or newbies routine. I have never even seen a post here from a seller who so identified themself.

Of course, I do realize that a fine, upstanding fellow like you would never use a shill bidder, but there are others who might.

This is especially true since you can't see the other bidders as you can at a "live" auction.

>If you don't like it.... don't read it.

Ahhhh, now we come to the point: On the other hand, if you don't like the bitching, don't post the eBay stuff here!! Of course, if EVERYONE used "eBay" in the subject line . . . . . but I suppose they are just dumbfounded by the glow and excitement of the "great Free Market"!

>There are two kinds of people:
>Those who get "in the arena" and
>strive for what they want,
>and those who stand outside whining.
>Which are you?

Maybe the one willing to deal one-on-one, buyer to seller in this or any "arena"? You act as if auction participants are gladiators, pro football players and Sumo wrestlers rolled into one. The real wimps are those who can't make value judgements and must depend on others (bidders) to set the price for them. Of course, occasionally, the bidders disappoint; what to do? Run back over to those crummy, little newsgroups to entice a few more gladiators into the "great Free Market" arena?

You also act as if there are no suspect motives of sellers who use auctions. What about greed and trying to squeeze the last nickel out of the buyer? No? Not so? If getting "in the arena" and striving "for what they want" is such a fan-damn-tastic, "great Free Market" idea, then why corrupt the process by having reserve price auctions?? What, no purity from the purists?

And, why, then, have almost all of YOUR auctions been RESERVE PRICE auctions? A little bet hedging . . . or worse? Like advertising a commercial entity (eBay) on a (supposedly) non-commercial newsgroup?

Bill

I am posting this for an old friend who is retiring from the Television business after many years. "Jack's Electronics" has huge inventory of antique tubes, NOS. He is a big collector of Beatles and Elvis L.P.s, and would probably trade tubes, etc for them.
Please call 616-894-4762, and ask for Jack. He has the oddest collection of antique Televisions and Radios as well, plus many rare L.P.s.
Thanks for reading!
Best Regards,
David Fleming

I am working on a 60's vintage ham transceiver and can't seem to get the correct bias voltages. Something wierd is going on:

There is a silicon rectifier at the source of the negative bias supply. The voltage I get there is around -160V.

In series with this source are a number of resistors in series, to drop the voltage down closer to the required values for 3 different tube-grids.

However, I am not getting appreciable voltage drops. The grids are all reading nearly 160 volts. Can anyone suggest what is amiss? The resistor values are apparently checking out fine, & I see no obvious shorts.

The series resistances from the -160 v source are 560K, 1 Meg, and 56K, all in a row, before the line branches out to the 3 tube grids. There are separate additional resistors going the grids, which are supposed to end up at -45, -88, and -92 volts, respectively.

Yet the voltage doesn't drop hardly at all. (???)

Grateful for any advice... 73,

JG

>Really, you mean like this recent ad for eBay on r.r.a.b:

If you'd been reading the threads, you'd know I'm a recent
convert from not using "FA." I believed this sort of
discrimination was wrong, but some kind and civil
letters changed my mind. I haven't posted any sales
since then, but shortly will do so.
So your criticism on this point is a little late.

I'm glad to see you read my ads, though!

>>Don't try to punish mature adults who want
>>to participate in the great Free Market and
>>get a crack at good radios.
>
>If they wanted to participate in the "great Free Market", why are they
>bothering with the lowly newsgroups in the first place?
Why do people in any sales activity advertise on newspapers,
radio, television, pasted to lamp poles??
Because that's what people read or hear.
Newsgroups are just electronic bulletin boards, just like the
one in the library lobby. I don't see you standing on a
soap box at the library raising cain about it.
People would think you're wierd.... hmmmm!

>Could it be because the newsgroups are the great free market and eBay is
>nothing more than a cumbersome, slow-motion auction?
Nope. The newsgroups *were* the market. They are ineffiecient sales
tools, with no reliable means of setting a fair market price.
People are forced to guess or play the blind, no-price "best offer" games.
Ebay is the next evolutionary step in our type of trade,

based humanity's eons of success with auctions.
The newsgroups are good for general communication to our fellows
and for notices of sales... just like your local newspaper.

>I have never been to a
>real auction that lasted more than 10 minutes/item.
>eBay auctions can last 10 days!!(actually only 7.ed.)
I've answered this one before.
Not everyone sees the auction the same time *you* do.
Most grown people don't demand instant gratification,
so don't mind waiting a few days to give everyone
the chance to take a crack at it.

>And, the 1981 Heathkit Christmas catalog you had up for auction is a radio? I
>can't understand why you didn't advertise that one on the newsgroups!! HOT!
I don't understand your reasoning. If it's bad on ebay because
it's not a radio, why is it good *here* because it's not
a radio??? DUHHHHH......

>But, with all of your confidence in the "great Free Market",
>why advertise them on the newsgroups??!!
I've already answered this a dozen times in a dozen threads.
Why do you keep asking it??
If you still don't get it, back-up about five paragraphs
and read slowly and carefully. The answer's in there- honest.
Do you have some *personal* beef against me, or something?
That's too bad... I'm really a nice guy. :-)

>Next thing, you'll be out nailing eBay signs on trees and utility poles!!
If I thought I could sell the stuff that feeds my kids
and pays my bills better, I'd certainly do just that.
When someone else wants to pay those for me,
they can tell me how to advertise.

>And, please, don't hit us with that tired old stealing from widows, orphans or
>newbies routine. I have never even seen a post here from a seller who so
>identified themself.
Like someone is going to say:
"Radio stolen from Starving Widow! Best Offer!"
Now I *DO* think you have a personal bug in your ear or something.
Take a few deep breaths and relax!
None of this matters enough to get so upset.

>Of course, I do realize that a fine, upstanding fellow like you would never use
>a shill bidder, but there are others who might.
I've answered this one, too. "Shill" bidders are a straw man problem.
People bid the price they want to pay. Period. If it's the
winning bid, who cares who "shills" along the way. If the person
bid more then they wanted to pay, who's fault is that???
Shilling will eventually lead to loss of money, since people will
get greedy and "shill" themselves right out of a sale.
So no... I don't use them. It's a stupid, self-defeating practice.

In internet auctions, honesty isn't just the best policy,
it's the ONLY policy if you want to survive!

>... if you don't like the bitching, don't post the eBay stuff here!!
Nonsense. That's like telling me I shouldn't advertise in
a newspaper because someone whined to me about it.
Most people would question the good sense of the whiner.

>>There are two kinds of people:
>>Those who get "in the arena" and
>>strive for what they want,
>>and those who stand outside whining.
>>Which are you?
>
>Maybe the one willing to deal one-on-one, buyer to seller
>in this or any "arena"?
And maybe the one hoping to catch a newbie who doesn't
know that a Collins 75S3 is worth more then $100.
How many times have you bragged to your buddies about
screwing someone like that?
Hey... you want to impune my integraty here,
I can play the same game.

>...The real wimps are those who can't
>make value judgements and must depend on others
>(bidders) to set the price for them.
I don't understand why you don't write the
New York Stock Exchange and bitch to them about
their bidding on pieces of companies. Can't they
just get together and tough-out a price
like real he-men?? No- obviously not.
Tougher dealers would screw the heck out of
newer or less cut-throat people, which
is exactly what used to happen here and in
older radio sales forums.
Auctions have been around for so long because they
level the playing field for everyone.
It's a matter of your buying power and
your willingness to participate.

>Of course, occasionally, the bidders disappoint; what to do? Run back
>over to those crummy, little newsgroups...
Or newspapers, or print more circulers, or buy more
ad time on TV or Radio, etc.. Etc...
So what's your complaint??
Oh... and I don't think they're crummy.
YOU said that, not me.

>If getting "in the arena" and striving "for what they want" is such a
>fan-damn-tastic, "great Free Market" idea, then why corrupt the process by
>having reserve price auctions??
Simple. The market price isn't always the seller's price.

They can choose to hang-onto their assets until the market improves,
or any other number of reasons.
Part of the freedom of the Free Market is the freedom NOT to sell
if you don't agree with the going price. What do you think the
big auction we all call the New York Stock Exchange
does every business day?? The "ASK" is the reserve;
a person won't sell his or her assets for less then that.
You could put a Collins S-Line on sale. What if all the
Collins collectors happen to be out of town?
You'd scream like a raped-ape if someone carted-off
your mint S-Line for $150.
Or as happened to me-- my internet provider's FTP site went down
for days and the ads for all the Heathkit catalogs wouldn't load.
So the bidders didn't bid up the prices to the market.
If I hadn't used a reserve, I would have been forced to
sell my assets at less then the minimum I want for them.
The reserve is there to protect the seller against the
unexpected, and is an accepted, optional tool in every
major auction house in the whole, blue world.

Enough of this squabbling.
What is your *real* beef, Bill?
You aren't getting this upset in a public
forum over just a few, easily ignored sales posts.
I'd as soon forget all this verbal bickering.
But if you take me to task publicly,
you can expect a public response.

Let's call it a "draw" and acknowlege that
we just differ on this issue.
I'm going to post eBay notices here,
as is my right. You can ignore them,
which is your right.

Whaddaya say?

I just bought a Heathkit HW-9 qrp rig. Actually works pretty well (just got it last night)....at least rx <grin>. I noticed that tuning to WWV on 10.0 that the dial reads about 4-5 khz too high. I plan on using the manual I got with the rig to do the test and allignment procedure if for no other reason than to learn more about this rig. I was told that 4-5 khz off was about right for a HW-9. Any suggestions/comments ? If you know of anyone with experience with this rig I could contact should I get into any trouble ...let me know.

Tnx es 73 de Mike

Source record: 106141

Why don't those using eBay preface their postings here with [eBay] in the subject line. Those who don't want to know about the listings could easily set up a filter to reject those messages and those who want to know about applicable listings will be able to read them. I also suggest that any Boatanchor stuff listed on eBay have the [BA] legend in the eBay description to make searching easier.....

Filters are a good thing. They work pretty well on here, except for my friend whose mail and news reader rejects "Lambda" as he has no interest in that particular club, but it would also reject postings for power supplies made by a company of the same name.

I have bought some really neat things on eBay as well as selling some as well.

This is very much a "stuff" oriented hobby and any and all avenues to facilitate the transferral of same from one basement to another is acceptable to me.

Sounds like you don't have any current flow through the resistor
string - should there be a resistor to ground at the end?

1450. Trade Dow Keys for Bird Slugs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-28 00:00:00 UTC
From: kc5egg@ix.netcom.com
Message-ID: <6i5d16$163@sjx-ixn11.ix.netcom.com>
Source record: 106143

Hi All,

Sorry for the trade post on this NG but then only folks who seem to
appreciate Dow Keys are Boatanchor people.

I have a small number of Dow Key 60-260442 relays.
These are 115V coil, UHF connectors, and external auxaliary contacts.
All are very nearly new and suitable for a display station.

I need Bird Slugs as follows:

50H 25 A or B
100H 500 A or B
500H 1000 A or B
1000H
2500H

I'm not really interested in selling the Dow Keys, just trading. Send
me an email if you are interested.

Jerry

I would check to see if the opposite end of the string has become ungrounded.
If it has, a typical high impedance voltmeter will show substantially the same
voltage all along the divider string.

Hello,

What rig is this?

The bias network in most rigs consists of a voltage divider, because the tube grids don't draw current. There may be a resistor missing, or open.

>I have a real nice National RCQ receiver that is missing the
>"clamshell" top,rear, and back cover. Anyone have one of these?
The clamshells are kinda funny things, I've seen a couple but they did
not seem to be factory covers, both looked like a later add on built
in someones metal shop. I'm not sure if they were ever "correct" in
the sense of being supplied with the radios.

>would also be nice to find a 19" cabinet for an 8 3/4" rack panel.
Just about any suplus place can help you here, or you can spend more
and get a new one from Newark or another vendor.

> Also, can anyone advise me of their experiences with the RCQ, or where
>to find any info on the internet about this receiver?
Not a lot of publicly available information that I know of...
If someone has a neat web page up, I'd love to hear about it.

I've never found the time to load my National research into web
pages.... :-(

The National RCQ is one of the latest, (perhaps the last?) of
Nationals series of coil-catacomb CAA radios. The CAA NC-100
based radios were made from 1937 to 1948. Lots of minor changes from
version to version, interesting history, fun radios to play with. :-)

-Larry Ware

I have for sale a NOS RU-19 radio receiver,type CW-46048D. The receiver is made by Western Electric. It has the black wrinkel finish and is in mint cond. It comes with a dual coil set type CW-47105. This is the low range "O" 187-305 kc and high range "P" 281-455 kc.
I also have with the set another NOS new coil set type CW-47108. This is low range "Q" 529-854 kc and high range "M" 5075-7780 kc. This coil set is in a coil set container type CW-47029.
The set comes with local tunning and range change knobs.
I am asking $300.00 or best offer for the set.

Hello,

Can anybody tell me what the value is of the filter choke in
the power supply of this receiver.
The thing looks like it has been overheated (It looks like wax
dripping out of it when it is on for a while). I have a schematic
coming in the mail but I want to "jump the gun" and replace the choke.

Thanks
and 73's

Gary

1465. RE: Ebay posts on this newsgroup

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-29 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <6i7vimglc1@camel15.mindspring.com>
Source record: 105959

I had about 50/50 for and against my stand on prohibiting Ebay postings here.

Many of you answered without even asking why.....I would like the signal to noise level of this newsgroup to stay focused on old amateur radio gear first. I prefer that if you have something to sell do it here. or in an acceptable place like baswap or rec.radio swap. Most of you don't remember this but the rec. groups were set up fo information and help. Sale posts were 'ALL" supposed to go to rec.radio.swap! The hams that started these newsgroups tried to stop all the sale posts as many government and business personnel were able to log on so long the groups did not push sales...as sales bring in commercials like the one recently for "hamradio plaques." And so many of the people who post here are dealers...and I don;t mean buying a few radios then selling them later after refurb or getting tired of the radio. Read the FAQ on the rec newsgroups if you don't believe me.

I don't disagree with auctions (where some of you got that idea I will never know) but I am not sure about Ebay. If this is a free media then I have no problem...If you pay a portion of your sale price or pay something to list then I say look for a better place or better yet support your local hamfest and pay for a table.

So some of you don't agree with my statement that Ebay is a web site and many cannot get to it. Many on the internet are using juno or a limited ISP and can only get to e-mail and some newsgroups. Did you know in Europe and some parts of the world that telephones bills are paid on a measured rate. Ask that UK ham if he can spend several hours surfing the web and Ebay when he pays for usage. So there are legit limitations.

Finally, some of you got far off track and were responding to one another.

So I will continue to skip all the Ebay posts..please continue to put Ebay in the message so I don't pull you up and see Ebay in the content.

73, Dave K4JRB

Spin the VFO dial on the shaft 4 to 5 Khz?........ ;)

1467. Info. and a Tube Testers wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-29 00:00:00 UTC
From: tz <zoch@data-io.com>
Message-ID: <01bd67c8$f3952580$42138a8b@barberd.nt.data-io.com>
Source record: 105961

I am looking into buying a Tube Tester. But am unsure what is avalible and what is the going price range. I am planning on restoring some Hallicrafters, Heathkit and Yeasu equipment that has come my way. I also am acumulating parts to build a 2M amp. based around a 8877 and a few other prodjects. I would like to pick up a tube tester. I am new to working on the older gear and am not sure about the testers at all. I have run them in he past but never knew alot about them.
Are they fairly universal?
Are any types to be avoided?
About how much is a fair price?
Anyone have a working Tube Tester they would like to get rid of?

Thanks
Tom Zoch

For Sale - Must move before Dayton - Price reduced since last post:

Heath SB-200 1 KW amplifier, 80 thru 10 meters, in excellent condition. Full output 572Bs in final (800 watts out with Collins 32S-3 driving it). No manual.

Front panel, knobs and meter are immaculate, cabinet has no dings or scratches - just a couple of typical slight "age spots" that Heath cabinets get.

Asking $325.00 plus shipping from 44134.

Telefunken made metal-ceramic power valves already in 1944. Wonder when
Eimac started to produce similar valves? The German valve type has been
produced in Russia since the war, wonder why the yanks never tried it?
These russian valves are very popular all over Europe for VHF/UHF
amateur power amplifiers.

1484. Re: 12AU7 as product detector?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-29 00:00:00 UTC
From: la8ak@xnd.no
Message-ID: <354666d0.28544086@news.sol.no>
Source record: 106073

I received some suggestions, but none tells why a single triode 12BH7 is better than 12AU7. One triode is already occupied for the BFO, so if I had to choose a twin-triode PD system, I had to do it without BFO. So, in fact I see no valuable information received, it seems that the question is misunderstood or not read.
After all, I chose 12AT7 for higher gain.

In another receiver (Lorenz 6P203 -covers 1430-8800kHz) only a 6AV6/EBC91 diode is used for ssb/cw/am detector, another diode for agc. Cathode voltage for agc delay is +5V (biased with a 220K resistor to B+). With 4V RMS BFO signal (and somewhat less IF signal) ssb sounds good. With either RX the IF is split into two different amplifiers, one for the detector and one for the AGC system, so BFO does not jam up the AGC, and agc still works fb for ssb.

I tested either RX's in the length on 80/40/20m CW/SSB and they seem to work fine, but LC filters provides not satisfactorily selectivity for crowdy bands. The 6P203 has 1-6kHz continiously variable selectivity permeability tuned IF LC filter (5 IF cans on 471kHz) plus UFB 300Hz BW audio cw filter

Hello. I have a Eico 720 CW transmitter for sale. It is in excellent condition with a new manual reprint. The only thing cosmetically I see is a chip in the crystal socket. I was told by a close friend that I aquired it from it worked perfectly. I brought the unit up carefully on a variac and all looks great. I didn't have a crystal for it to test transmit. I will guarantee your money back if it doesn't perform as it should. This unit is Very nice!! I don't know the going rate for this unit, so I will entertain all reasonable offers. Again, I guarantee it will work.
Feel free to check my ebay feedback.

Jeff,

Try using 2 knobs from the Drake TR-7/R-7. That is what I used and they look great and are a close match.

1488. FS: ART-13

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-29 00:00:00 UTC
From: jpevner@aol.com
Message-ID: <1998042902231200.WAA26663@ladder03.news.aol.com>
Source record: 106077

For Sale: ART-13, $75 + shipping.

Has some ham hacks, Porcelain output plate replaced with metal plate and coax connector. One of the power connectors has been replaced with some other kind. I haven't had a chance to do more than clean it up, so it's functionality is unknown, it's for someone who just want's to get one to play with and get on the air.

>Ebay is the next evolutionary step in our type of trade,
>based humanity's eons of success with auctions.

"eons of success with auctions"??? I am not sure there has even been trade for eons!

And, the "reliable means of setting a fair market price" is what an informed buyer will pay a willing seller. The competition that results from bidding tends to impair one's ability to make good value judgements. In those cases, the bids come from a person's competitive instincts and not from their cognitive resources.

>The newsgroups are good for general communication to our fellows
>and for notices of sales... just like your local newspaper.

Ahhh, but these particular newsgroups are SUPPOSED to be non-commercial. That is, you aren't supposed to post advertisements for businesses here.

>>I have never been to a
>>real auction that lasted more than 10 minutes/item.
>>eBay auctions can last 10 days!!(actually only 7.ed.)
>I've answered this one before.
>Not everyone sees the auction the same time *you* do.

>I don't understand your reasoning. If it's bad on ebay because
>it's not a radio, why is it good *here* because it's not
>a radio??? DUHHHHH......

Well, duh - don't you remember saying, in part, "get a crack at good radios."??
What I am saying is that most folks might be a little embarrassed to advertise
that catalog anywhere! (And catalogs ain't radios!!)

>>But, with all of your confidence in the "great Free Market",
>>why advertise them on the newsgroups??!!
>I've already answered this a dozen times in a dozen threads.
>Why do you keep asking it??
>If you still don't get it, back-up about five paragraphs
>and read slowly and carefully. The answer's in there- honest.
>Do you have some *personal* beef against me, or something?
>That's too bad... I'm really a nice guy. :-)

I am sure you are a nice guy and there is no personal beef. The thing I am not
sure of is your level of confidence in the "great Free Market", as you refer to
eBay. If you were really confident, you wouldn't need to advertise in places
that "*were* the market"!

You said: "I've already answered this a dozen times in a dozen threads."
Did you ever stop to think that maybe the reason this topic keeps coming up is
that it is just might be a valid complaint?

>>Next thing, you'll be out nailing eBay signs on trees and utility poles!!
>If I thought I could sell the stuff that feeds my kids
>and pays my bills better, I'd certainly do just that.
>When someone else wants to pay those for me,
>they can tell me how to advertise.

So, you are making your living, ie, running a business that you are advertising
here?

>>And, please, don't hit us with that tired old stealing from widows, orphans
>or
>>newbies routine. I have never even seen a post here from a seller who so
>>identified themself.
>Like someone is going to say:
>"Radio stolen from Starving Widow! Best Offer!"
>Now I *DO* think you have a personal bug in your ear or something.
>Take a few deep breaths and relax!
>None of this matters enough to get so upset.

Why do you think *I* am upset? It is not my advertising that is being discussed
here. And, you missed the point: I said they (sellers) did not identify
themselves as widows, orphans or newbies. And, I believe that to be a correct
statement. If so, then how the hell can you make the assertion that anyone here
is stealing from or taking advantage of widows, orphans and newbies? How do you
identify them and, then, how do you know what deals they make? The bug I have

is with people who misuse these newsgroups to advertise commercial entities.

>>Of course, I do realize that a fine, upstanding fellow like you would never use a shill bidder, but there are others who might.

>I've answered this one, too. "Shill" bidders are a straw man problem.
>People bid the price they want to pay. Period. If it's the
>winning bid, who cares who "shills" along the way.

How about the poor sucker that got tricked into paying $50 more than he would have had there been no shill?

>If the person bid more then they wanted to pay, who's fault is that???

Well, now - that is quite an odd position for the defender of the "great Free Market" to take. Did you really mean to say that shill bidding is OK since no one is FORCED to bid higher than the shill?? What about the statutes against fraud? Is an online auction exempt? Surely, that is what you meant to imply.

>Shilling will eventually lead to loss of money, since people will
>get greedy and "shill" themselves right out of a sale.
>So no... I don't use them. It's a stupid, self-defeating practice.
>In internet auctions, honesty isn't just the best policy,
>it's the ONLY policy if you want to survive!

I agree, but the possibility is very real and when coupled with the competitive juices . . . folks DO pay more than they should/would everyday in straight sale situations.
Why do you think it is referred to as "competitive bidding"?

>>... if you don't like the bitching, don't post the eBay stuff here!!
>Nonsense. That's like telling me I shouldn't advertise in
>a newspaper because someone whined to me about it.
>Most people would question the good sense of the whiner.

But, you told the rest of us "If you don't like it.... don't read it."
Why is it OK for you to say such and not for me to do the same?? And, besides, if I see a post marked "For Sale - Just what I wanted", do you expect me to 'ESP' myself into not reading it?? It said "For Sale", not "Slow motion auction", for Heaven's sake. How can I avoid something that is so well camouflaged? You see, not everyone is so blessed to have 'Super Dooper News Agent' on the job - ie, 'filters, we ain't got (to show you) no stinkin' filters!!'

>>>There are two kinds of people:
>>>Those who get "in the arena" and
>>>strive for what they want,
>>>and those who stand outside whining.
>>>Which are you?
>>
>>Maybe the one willing to deal one-on-one, buyer to seller
>>in this or any "arena"?
>And maybe the one hoping to catch a newbie who doesn't

>know that a Collins 75S3 is worth more then $100.

I have never been interested in buying a Collins 75S3 and, once again, I have never seen a post from anyone who referred to themselves as a "newbie". And, I don't really think there are many "newbies" with Collins gear and certainly not on the newsgroups with it. Maybe there should be a rec.radio.newbies group to harden their soft, little heads full of mush and turn them into the very super traders that eat newbies for breakfast!! Hmmm . . .Is that a self-defeating proposition?

You gotta do better than this tired, worn-out, meaningless newbie argument.

>How many times have you bragged to your buddies about
>screwing someone like that?
>Hey... you want to impune my integraty here,
>I can play the same game.

Well, I don't know what "integraty" is, but I haven't bragged to my buddies about screwing anyone over a purchase made via a newsgroup. Like you, I find most of the folks using the newsgroups are "mature" and pretty good at taking care of themselves. Now, I have told my buddies about other things I have seen here . . .

>>...The real wimps are those who can't
>>make value judgements and must depend on others
>>(bidders) to set the price for them.
>I don't understand why you don't write the
>New York Stock Exchange and bitch to them about
>their bidding on pieces of companies. Can't they
>just get together and tough-out a price
>like real he-men?? No- obviously not.

Simple, they don't advertise here!!

>Tougher dealers would screw the heck out of
>newer or less cut-throat people, which
>is exactly what used to happen here and in
>older radio sales forums.

Gee, you mean that by sending someone a strong-worded email message, I could coerce them into giving me a better deal? Tell you what, you try it and post your results here. Get real!! This is as lame as the widows and orphans deal.

>Auctions have been around for so long because they
>level the playing field for everyone.
>It's a matter of your buying power and
>your willingness to participate.

Great. No problem whatsoever. If that is your opinion, auction until you are blue in the face. Go forth and compete in the "great Free Market". But, why is it necessary to continue to violate the non-commercial aspects of these newsgroups in order to do so? And, how does it "level the playing field"? What needs leveling, anyway?

>>Of course, occasionally, the bidders disappoint; what to do? Run back
>>over to those crummy, little newsgroups...
>Or newspapers, or print more circulers, or buy more
>ad time on TV or Radio, etc.. Etc...
>So what's your complaint??
>Oh... and I don't think they're crummy.
>YOU said that, not me.

No, they are 'has-beens' ("newsgroups *were* the market") according to YOU. I like the newsgroups - well, I am not too crazy about the .scanner groups as they tend to get so far off topic. We aren't doing that now, are we?

>>If getting "in the arena" and striving "for what they want" is such a
>>fan-damn-tastic, "great Free Market" idea, then why corrupt the process by
>>having reserve price auctions??
>Simple. The market price isn't always the seller's price.
>They can choose to hang-onto their assets until the market improves,
>or any other number of reasons.
>Part of the freedom of the Free Market is the freedom NOT to sell
>if you don't agree with the going price.

But, I thought you implied that an auction was a " reliable means of setting a fair market price."?

> What do you think the
>big auction we all call the New York Stock Exchange
>does every business day?? The "ASK" is the reserve;
>a person won't sell his or her assets for less then that.
>You could put a Collins S-Line on sale. What if all the
>Collins collectors happen to be out of town?
>You'd scream like a raped-ape if someone carted-off
>your mint S-Line for $150.

How does a raped-ape sound . . . don't believe I've ever heard one . . . And, once again, the stock exchanges don't advertise here!! But, I sure wish you would quit mentioning it . . . (Maybe good old Mr. Dow reads this group!)

>Or as happened to me-- my internet provider's FTP site went down
>for days and the ads for all the Heathkit catalogs wouldn't load.
>So the bidders didn't bid up the prices to the market.
>If I hadn't used a reserve, I would have been forced to
>sell my assets at less then the minimum I want for them.
>The reserve is there to protect the seller against the
>unexpected, and is an accepted, optional tool in every
>major auction house in the whole, blue world.

You mean eBay is not the ideal means of doing business? You know, I already knew that. And, from that, I hope all can see that dealing other than DIRECTLY with a buyer or seller has big risks!!

>Enough of this squabbling.
>What is your *real* beef, Bill?
>You aren't getting this upset in a public
>forum over just a few, easily ignored sales posts.

>I'd as soon forget all this verbal bickering.
>But if you take me to task publicly,
>you can expect a public response.
>
>Let's call it a "draw" and acknowlege that
>we just differ on this issue.
>I'm going to post eBay notices here,
>as is my right. You can ignore them,
>which is your right.
>
>Whaddaya say?

>Dave AB5S
>arc5@ix.netcom.com

I will agree to disagree with you. And, once again, I am not upset. I am simply having a hard-nosed disagreement with you. And, besides, I am much more effective when I am *not* upset. I do have a problem with you (and others) when it comes to the non-commercial thing. eBay is fine as online auctions go. It has faults, but it (mostly) works OK.

And, it is not that I don't like you; we probably have a lot in common. We simply disagree about the propriety of such postings to these newsgroups.

You might never hear from me again (wipe that drool off of your chin) if you eBay guys would practice a little "honesty in advertising" and ALWAYS use "eBay" as the first word in your subject lines.

And, no, it would not be "discrimination", it would be a simple courtesy that would probably go a long way toward settling this matter until we are able to find a more definitive permanent solution. What do you say?

Regards,

Bill

themselves as widows, orphans or newbies. And, I believe that to be a correct
statement. If so, then how the hell can you make the assertion that anyone here
is stealing from or taking advantage of widows, orphans and newbies? How do you

identify them and, then, how do you know what deals they make? The bug I have is with people who misuse these newsgroups to advertise commercial entities.

>>Of course, I do realize that a fine, upstanding fellow like you would never use a shill bidder, but there are others who might.

>I've answered this one, too. "Shill" bidders are a straw man problem.
>People bid the price they want to pay. Period. If it's the
>winning bid, who cares who "shills" along the way.

How about the poor sucker that got tricked into paying $50 more than he would have had there been no shill?

>If the person bid more then they wanted to pay, who's fault is that???

Well, now - that is quite an odd position for the defender of the "great Free Market" to take. Did you really mean to say that shill bidding is OK since no one is FORCED to bid higher than the shill?? What about the statutes against fraud? Is an online auction exempt? Surely, that is what you meant to imply.

>Shilling will eventually lead to loss of money, since people will
>get greedy and "shill" themselves right out of a sale.
>So no... I don't use them. It's a stupid, self-defeating practice.
>In internet auctions, honesty isn't just the best policy,
>it's the ONLY policy if you want to survive!

I agree, but the possibility is very real and when coupled with the competitive juices . . . folks DO pay more than they should/would everyday in straight sale situations.
Why do you think it is referred to as "competitive bidding"?

>>... if you don't like the bitching, don't post the eBay stuff here!!
>Nonsense. That's like telling me I shouldn't advertise in
>a newspaper because someone whined to me about it.
>Most people would question the good sense of the whiner.

But, you told the rest of us "If you don't like it.... don't read it."
Why is it OK for you to say such and not for me to do the same?? And, besides, if I see a post marked "For Sale - Just what I wanted", do you expect me to 'ESP' myself into not reading it?? It said "For Sale", not "Slow motion auction", for Heaven's sake. How can I avoid something that is so well camouflaged? You see, not everyone is so blessed to have 'Super Dooper News Agent' on the job - ie, 'filters, we ain't got (to show you) no stinkin' filters!!'

>>>There are two kinds of people:
>>>Those who get "in the arena" and
>>>strive for what they want,
>>>and those who stand outside whining.
>>>Which are you?
>>
>>Maybe the one willing to deal one-on-one, buyer to seller
>>in this or any "arena"?

>And maybe the one hoping to catch a newbie who doesn't
>know that a Collins 75S3 is worth more then $100.

I have never been interested in buying a Collins 75S3 and, once again, I have never seen a post from anyone who referred to themselves as a "newbie". And, I don't really think there are many "newbies" with Collins gear and certainly not on the newsgroups with it. Maybe there should be a rec.radio.newbies group to harden their soft, little heads full of mush and turn them into the very super traders that eat newbies for breakfast!! Hmmm . . .Is that a self-defeating proposition?

You gotta do better than this tired, worn-out, meaningless newbie argument.

>How many times have you bragged to your buddies about
>screwing someone like that?
>Hey... you want to impune my integraty here,
>I can play the same game.

Well, I don't know what "integraty" is, but I haven't bragged to my buddies about screwing anyone over a purchase made via a newsgroup. Like you, I find most of the folks using the newsgroups are "mature" and pretty good at taking care of themselves. Now, I have told my buddies about other things I have seen here . . .

>>...The real wimps are those who can't
>>make value judgements and must depend on others
>>(bidders) to set the price for them.
>I don't understand why you don't write the
>New York Stock Exchange and bitch to them about
>their bidding on pieces of companies. Can't they
>just get together and tough-out a price
>like real he-men?? No- obviously not.

Simple, they don't advertise here!!

>Tougher dealers would screw the heck out of
>newer or less cut-throat people, which
>is exactly what used to happen here and in
>older radio sales forums.

Gee, you mean that by sending someone a strong-worded email message, I could coerce them into giving me a better deal? Tell you what, you try it and post your results here. Get real!! This is as lame as the widows and orphans deal.

>Auctions have been around for so long because they
>level the playing field for everyone.
>It's a matter of your buying power and
>your willingness to participate.

Great. No problem whatsoever. If that is your opinion, auction until you are blue in the face. Go forth and compete in the "great Free Market". But, why is it necessary to continue to violate the non-commercial aspects of these newsgroups in order to do so? And, how does it "level the playing field"? What

needs leveling, anyway?

>>Of course, occasionally, the bidders disappoint; what to do? Run back
>>over to those crummy, little newsgroups...
>Or newspapers, or print more circulers, or buy more
>ad time on TV or Radio, etc.. Etc...
>So what's your complaint??
>Oh... and I don't think they're crummy.
>YOU said that, not me.

No, they are 'has-beens' ("newsgroups *were* the market") according to YOU. I like the newsgroups - well, I am not too crazy about the .scanner groups as they tend to get so far off topic. We aren't doing that now, are we?

>>If getting "in the arena" and striving "for what they want" is such a
>>fan-damn-tastic, "great Free Market" idea, then why corrupt the process by
>>having reserve price auctions??
>Simple. The market price isn't always the seller's price.
>They can choose to hang-onto their assets until the market improves,
>or any other number of reasons.
>Part of the freedom of the Free Market is the freedom NOT to sell
>if you don't agree with the going price.

But, I thought you implied that an auction was a " reliable means of setting a fair market price."?

> What do you think the
>big auction we all call the New York Stock Exchange
>does every business day?? The "ASK" is the reserve;
>a person won't sell his or her assets for less then that.
>You could put a Collins S-Line on sale. What if all the
>Collins collectors happen to be out of town?
>You'd scream like a raped-ape if someone carted-off
>your mint S-Line for $150.

How does a raped-ape sound . . . don't believe I've ever heard one . . . And, once again, the stock exchanges don't advertise here!! But, I sure wish you would quit mentioning it . . . (Maybe good old Mr. Dow reads this group!)

>Or as happened to me-- my internet provider's FTP site went down
>for days and the ads for all the Heathkit catalogs wouldn't load.
>So the bidders didn't bid up the prices to the market.
>If I hadn't used a reserve, I would have been forced to
>sell my assets at less then the minimum I want for them.
>The reserve is there to protect the seller against the
>unexpected, and is an accepted, optional tool in every
>major auction house in the whole, blue world.

You mean eBay is not the ideal means of doing business? You know, I already knew that. And, from that, I hope all can see that dealing other than DIRECTLY with a buyer or seller has big risks!!

>Enough of this squabbling.
>What is your *real* beef, Bill?
>You aren't getting this upset in a public
>forum over just a few, easily ignored sales posts.
>I'd as soon forget all this verbal bickering.
>But if you take me to task publicly,
>you can expect a public response.
>
>Let's call it a "draw" and acknowlege that
>we just differ on this issue.
>I'm going to post eBay notices here,
>as is my right. You can ignore them,
>which is your right.
>
>Whaddaya say?

>Dave AB5S
>arc5@ix.netcom.com

I will agree to disagree with you. And, once again, I am not upset. I am simply having a hard-nosed disagreement with you. And, besides, I am much more effective when I am *not* upset. I do have a problem with you (and others) when it comes to the non-commercial thing. eBay is fine as online auctions go. It has faults, but it (mostly) works OK.

And, it is not that I don't like you; we probably have a lot in common. We simply disagree about the propriety of such postings to these newsgroups.

You might never hear from me again (wipe that drool off of your chin) if you eBay guys would practice a little "honesty in advertising" and ALWAYS use "eBay" as the first word in your subject lines.

And, no, it would not be "discrimination", it would be a simple courtesy that would probably go a long way toward settling this matter until we are able to find a more definitive and permanent solution. What do you say?

Regards,

Bill

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $200

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $225.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $225

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. Volums as follow: 3 4 5 7 8 9 11 14 17 19 20 22 24 25 28 39 50 54 57. $5.00 each or $80 for the Lot.

Hello Bill,

I'm not sure how much help you need, so I'll keep things simple. Please don't be offended if I'm writing below your level. Feel free to email with questions.

I'm going to post this in several parts because of time limitations. Here's part one.

The controls on the HX-11/DX-20 and their functions:

On/Off - Main AC power switch

Transmit/Standby - B+ switch, turns high voltage on and off but leaves heater voltage on

Tune/Operate - This switch grounds the screen of the 6DQ6 final amplifier, reducing its input to a few watts. Permits adjusting the oscillator without overheating the final amplifier.

Grid/Plate (Meter Switch) - Sets meter to read grid current or plate current of the 6DQ6. Grid current scale is low value (0-6?), plate current scale is high value (0-200?)

Band Switch - Selects band (80, 40, 20, 15, 10)

Oscillator - Tuning control for plate circuit of 6CL6 oscillator. Adjusts grid current of 6DQ6

Plate - Tuning control for plate circuit of 6DQ6 amplifier.

Loading - Loading (coupling) control for plate circuit of 6DQ6 amplifier.

The Plate and Loading controls are used together to tune the 6DQ6 plate circuit to match the antenna.

Part 2 to follow shortly.

For Sale A new BC-442-A antennan relay unit, with built-in ant current indicator
0-10 amps, and 50 mmf HV vacuum capacitor mounted in the rear of the case. Made by Western Electric, in US Army Signal Corps original box (dirty), unit is unpainted aluminum finish. I think this goes with the ARC-5 radio stuff ?? All spring loaded ant connectors. This looks mint, unused.

Asking $45 shipped to you door, CONUS only.

It isn't. As I said in a previous post-- I am now in
favor of this approach. For a time, I thought such
attitudes of discrimination against types of
legitimate sales were simply cowing to the
envy and jealously-based emotional responses
of the detractors.

After email exchanges with people
who can actually hold a kind, civil and
rational discussion over a point of disagreement,
I've come around to their thinking.

Here's the case for using "FA" or such:
First and foremost, it's simple courtesy.
That takes care of the emotional issue.

Second, and from a pragmatic angle, it
makes good business sense. A minority
of people will filter-out the posts.
They wouldn't buy the rig anyway,
so you haven't lost a thing--
except alot of moaning ;-)

Third-- You don't need the people
who filter, anyway. There are over
EIGHT MILLION people hitting eBay
every day. Thousands upon thousands
read the NGs (without ever posting)
to see what's available and then
go check out the auctions. The loss
of a few detractors is chicken-feed.

The majority of people want to know
what's for sale. They will read the "FA"
posts. However-- no one likes contention
and arguing. The more tension, the more
people will run from the whole thing.

Fighting over using "FA"
costs you sales in the long run,
and using it doesn't lose anyone.

That makes sense to me, so I support it.

I have heard that these kwea radios
had 5 RF stages + 210 KHz IF,
6 IF bandwidths etc etc

Nobody has talked about their
VFO or Local Oscilator stability.

How stable was that LO ???

Was it more stable than the Collins PTo mixed
with crystal Oscilator to wherever in the
HF band ???

If so, then they must have made some genuine
break-through .

I dont think SO!

aci6@aol.com (ACI6) wrote:
>...But, what you are doing is advertising for a commercial concern
>in a manner and place that are inappropriate.
Bill, unless I'm mistaken, the charter of this group allows
"for sale" postings. It doesn't say "for sale, except no auctions."
And how do you define a "commercial concern?" Where's the
demarkcation
line between what's a "commercial" and a "non-comercial" post?
Is it a matter of one person charging what you, personally, consider
a "fair" price? Is it amount of sales, type of sale,
wheither or not the person pays a utility bill with the proceeds?
Color of his eyes, what??
Sounds like an emotional call rather then a rational call to me.
In any event-- ebay postings are clearly within the group
charter, therefore they are by definition "appropriate".
The safeguard on this is the developing "FA" or "EBAY" standard,
which we'll get to shortly.

>>>I have never been to a
>>>real auction that lasted more than 10 minutes/item.
>>>eBay auctions can last 10 days!!(actually only 7.ed.)
>>Not everyone sees the auction the same time *you* do.
>
>Most people don't see an ad here at the same time either;
>what does that have to do with anything?
Everything! One of the worst things about the news groups
as a market is the fact that not everyone sees the ad
at the same time! How many times have we all answered a
"for sale" ad the moment we saw it, only to hear
"Oh, that sold two hours ago." Argh! That is one
lousy market. The auction removes that little bit
of nastyness and I thank heaven for it. I've found some
rare and wonderful pieces for my personal collection at
Ebay that surely would have been long-gone on a newsgroup.

More importantly-- the "takes too long" argument doesn't
hold water. As a kind person wrote me in email:
"I don't understand these people complaining
that Ebay auctions take too long. They can
use the search filters to read auctions ending
that day, or even auctions ending in the next
couple of hours!"
So, for those who do want instant gratification, there
is, in effect, a fast-paced auction every single day.
And it has much, much more stuff up for bids then any

ham auction I ever attended.

>Sounds like some kind of socialistic concept!
>What ever happened to "first
>come, first served"?
That concept works fine at, say, a hamfest.
Every person has the same chance to get his behind in
gear and get there early and make deals. Not so
on a news group. The lazy person might see an ad days ahead
of even the most gung-ho bargain hunter. That, in
my opinion, is morally wrong because it can reward
the unworthy and punish those who work harder.
It's happened to many of us here. The auction
removes that problem, too. Everyone who has the
earning power to buy has an equal chance.

>You said: "I've already answered this a dozen times in a dozen
threads."
>Did you ever stop to think that maybe the reason this topic keeps
coming up is
>that it is just might be a valid complaint?
Nope. Never occured to me for an instant that it might be valid ;-)

>>If the person bid more then they wanted to pay, who's fault is
that???
>Well, now - that is quite an odd position for the defender of the
"great Free
>Market" to take.
How so? "Freedom" means freedom to be stupid, too.
One pays for one's emotional, bad judgements.
That's how (some) people learn.

>Did you really mean to say that shill bidding is OK since no
>one is FORCED to bid higher than the shill??
Nope. Read again. I said it was stupid and self-defeating.
Not "morally wrong." That's emotion talking again.
I said that if you are willing to pay "x" price,
and you win the auction, then any shill along the way is
a non-problem. If you pay more then you wanted, you
must be responsible for your actions and stop blaming others.
If a shill runs the bidding past what you want to pay,
the seller loses the sale. Unless, of course,
there is someone who wanted to pay more then you,
in which case he would outbid you anyway.
Again, the shill is cancelled-out.
In the long run, it is a "non-problem" from the buyer's standpoint.

>What about the statutes against
>fraud? Is an online auction exempt?
Is a "shill" bidder fraud in the eyes of the law?
I don't know. I'm not a lawyer. Personally,
I don't think they matter a bit so I don't

worry about them. People using shills will
eventually shoot themselves in the foot, so let them.

>..., when coupled with the competitive
>juices . . . folks DO pay more than they should/would everyday
>in straight sale situations.
There's too much of this "I'm a poor victim!" attitude around today.
If a person bids more then he should,
HE IS RESPONSIBLE. PERIOD.
It's about time people stopped pewling and started
cleaning-up their own messes.

>Why do you think it is referred to as "competitive bidding"?
And what's wrong with competition?? Lord, the whole universe
works on competition! Don't tell Mother Nature, WalMart
or the NFL that competition is bad. That's how things improve.

>>>... if you don't like the bitching, don't post the eBay stuff
here!!
>>Nonsense. That's like telling me I shouldn't advertise in
>>a newspaper because someone whined to me about it.
>But, you told the rest of us "If you don't like it.... don't read
it."
>Why is it OK for you to say such and not for me to do the same??
This isn't "tit-for-tat," Bill.
You said, in effect;
"If you don't like a few people bitching
about your ads, don't run them!"
I said, in effect:
"If you don't like my ads, don't read them!"
Which one makes more sense to you?

(several points covered here, but I've already answered
them many times so will just let them be.)

>You mean eBay is not the ideal means of doing business?
Heck, no! I wish I knew what *was*, because I'd be
able to actually find, recover and fix radios as a business
and let it pay all my bills. I'd love doing that.
It's simply the best thing going right now.
IMHO, of course.

>I will agree to disagree with you. ...
>And, it is not that I don't like you; we probably have a lot in
common. We
>simply disagree about the propriety of such postings to these
newsgroups.
>
>... if you eBay guys would practice a little "honesty in advertising"
>and ALWAYS use "eBay" as the first word in your subject lines.
>...it would be a simple courtesy that would probably go a long way
>toward settling this matter until we are able to

>find a more definitive permanent solution. What do you say?
At last we find a point of agreement,
though I like "FA:" better and will use it.
I can't force anyone else to use an auction flag in their posts,
but I very much support it.

Thank you for the spirited debate, Bill.
I hope we can let this rest and practice
"peaceful co-existance" ;-)

Is it just me, or am I actually seeing the same WTB messages posted every day, day in and day out? We need to see some new posts to look at I'm starting to feel like that guy in that "Groundhog Day" movie.

Here's something:

Someone post the differences between a Kenwood TS-820 and a TS-820S. I'm curious as to the differences.

What's the difference between a Hallicrafters FPM-300 and the FPM-300 MkII Safari?

Well, I think of some other stuff later. Maybe we can get some interesting discussions going.....Mark KB4AEP

>73,
>David Fleming NS8S

Okay, so the carrier oscillator is solid. What about the power supply voltage to the VFO during transmit mode? Is it being dragged down by some kind of load, perhaps due to a weak regulator? Or, could there be a bad coupling cap somewhere that couples the VFO output to the transmit mixer, and the load in transmit mode is pulling the VFO by putting a (normally blocked) load on the VFO output? Wild guesses, all, but worth a look.

aci6@aol.com (ACI6) wrote:
>Actually, "For Sale" posts are not allowed.

Alas, the r.r.a.b. FAQ disagrees.... :-(

From the FAQ:

What is the rec.radio.amateur.boatanchors newsgroup for?

The polite discussion of boatanchor related topics:

Restoration
Repair
Operation
Collecting
Parts sources
Historical info
Legends and Lore
Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap
---
* added

Since Nick England wrote the FAQ, I think we can assume the charter
(Which does exist, Rick Stealey wrote it,) allows the buying and
selling of boatanchors in this newsgroup.

<sigh>
Boatanchor collecting, restoring, and operating used to be a
gentlemens hobby, with room for everyone.

Today it seems we argue over how they change hands, then over
the seller wanting the best price. (Auctions do tend to drive prices
upward.)

The number and the quality of the technical threads in r.r.a.b has
reached a new low... :-(

1526. Re: help on Heathkit HX-11 / DX-20

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-30 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <1998043001144900.VAA11028@ladder03.news.aol.com>
Source record: 105978

Hello Bill,

Here's part 2 of the DX-20/HX-11 info.

This rig is a classic oscillator/amplifier design. A 6CL6 crystal oscillator/multiplier dives a 6DQ6 amplifier. Both are keyed in the cathode and powered by a 5U4GB rectifier. The set uses crystals, but can be driven by an external VFO if properly modified. 80 meter crystals can be used for 80 and 40 meter operation, and 40 meter crystals for 40, 20, 15 and 10 meter operation. The output frequency is always an integral multiple of the crystal frequency. For example, a 7040 kc. crystal will produce an output frequency of 7040 kc. on 40 meters, 14080 kc. on 20 meters, 21120 kc. on 15 meters, and 28160 kc. on 10 meters.

First, the hookup. A key should be plugged into the key jack, a crystal into the crystal socket, and the dummy load connected to the output jack of the rig. This rig has a wide range pi net output, and you can use a 25 or 40 watt lightbulb as a dummy load. The rig should also be grounded for safety reasons.

I'll assume you're using the 7475 kc. crystal and a dummy load.

Next, preset the controls as follows:

Power: Off
Transmit/Standby: Standby
Meter switch: Grid
Tune/Operate: Tune

Turn the Oscillator, Plate and Loading controls all the way to the left. Check that the plates of the variable capacitors in the rig are all fully meshed.

Set the Band switch to 40 meters.

Make sure the key is open. At any time during the following, don't hold the key down for more than 15-20 seconds at a time. Let up on the key for at least as long as you held it down when tuning up.

The meter in the DX-20 is a cheap moving iron type that bounces around and takes a while to stop wiggling. This is normal, but highly annoying.

Turn the power switch to "On" and let the set warm up for at least 30 seconds.

Turn the transmit/standby switch to "Transmit"

Press (close) the key and slowly turn the Oscillator tuning control. Watch the meter - you should see the grid current rise and then fall as you turn the Oscillator control. Set the Oscillator control for 2 ma. of grid current. If the peak reading is more than 2 ma., use the setting that is to the left of the

peak setting. Release the key.

Turn the meter switch to "plate" and the tune/operate switch to operate. Press the key and turn the Plate tuning control slowly. You will see the plate current start out at a high value, then drop to a much lower value, then rise again as the Plate control is turned. Set the Plate tuning control to the minimum value of plate current. This is called "dipping the plate" and the Plate control is always set for this dip. Note the value of current on the meter and release the key.

If the plate current was 100 ma., you're all set. If it was a lower value, turn the Loading control to the right a bit (10-20 degrees or so) press the key and dip the plate again. This should make the plate current at the dip point rise. Repeat the process of turning the loading to the right and dipping the plate until 100 ma. is reached. Be sure to let up on the key at frequent intervals.

Set the meter switch back to "Grid" and recheck the grid current while pressing the key. If it has changed from 2 ma., adjust the Oscillator tuning control to get 2 ma. of grid current.

Set the meter switch to "Plate" and recheck the plate current, and the "dip". The rig is now tuned up for the crystal and band in use.

NOTE: The values of 2 ma. grid current and 100 ma. plate current are from my memory of my DX-20. It would be a good idea to see if you could get a copy of the manual for the rig to check this. You don't need the whole manual, which is mostly assembly instructions - just the schematic and tuneup instructions, which should only take a few pages.

Hope this helps.

In my last post, a key word was omitted in the paragraph that read:

"Well, now - that is quite an odd position for the defender of the "great Free Market" to take. Did you really mean to say that shill bidding is OK since no one is FORCED to bid higher than the shill?? What about the statutes against fraud? Is an online auction exempt? Surely, that is what you meant to imply."

The last sentence should have contained the word "NOT" and, thus, SHOULD HAVE READ:

"Surely, that is NOT what you meant to imply."

I apologize for any confusion caused by this omission and I have sent Dave a copy of this message to acknowledge same.

Regards,

Bill

>And how do you define a "commercial concern?" Where's the
>demarkcation
>line between what's a "commercial" and a "non-comercial" post?
>Is it a matter of one person charging what you, personally, consider
>a "fair" price? Is it amount of sales, type of sale,
>wheither or not the person pays a utility bill with the proceeds?
>Color of his eyes, what??
>Sounds like an emotional call rather then a rational call to me.
>In any event-- ebay postings are clearly within the group
>charter, therefore they are by definition "appropriate".
>The safeguard on this is the developing "FA" or "EBAY" standard,
>which we'll get to shortly.

Actually, "For Sale" posts are not allowed. This group is for the discussion of boatanchors. But, it is obvious that this "rule" is often violated. And, although there isn't a "charter" for this newsgroup, at least, not that I can find, the following is from a general guide to rec.radio.swap which is where "For Sale" posts belong:

"Individuals who are involved in the regular business of buying and selling for profit are requested not to abuse this forum by using it as a "free advertisement" service for their business, although they are welcome to participate as individuals. The
distinction here is that there is a cultural bias on Usenet, and an actual prohibition on some networks that carry Usenet traffic, against using the net for commercial purposes. Let your conscience be your guide."

Now, if commercial ads are discouraged on rec.radio.swap and "For Sale" ads are discouraged here . . . Let your conscience be your guide!

>>>>I have never been to a real auction that lasted more than 10
>>>>minutes/item. eBay auctions can last 10 days!!(actually only 7.ed.)
>>>Not everyone sees the auction the same time *you* do.
>>
>>Most people don't see an ad here at the same time either;
>>what does that have to do with anything?
>Everything! One of the worst things about the news groups
>as a market is the fact that not everyone sees the ad

>at the same time! How many times have we all answered a
>"for sale" ad the moment we saw it, only to hear
>"Oh, that sold two hours ago." Argh! That is one
>lousy market.

Why is it a "lousy market"? Reality? Real time? Disappointment? Are there no disappointments at auctions? Again, allowing everyone to have a shot is not only impractical, it is akin to "outcome-based education" and some of the other idiotic, socialistic ideas that are floating around these days. Heck, I guess everyone should own the Hope diamond and a Mona Lisa, too?

> The auction removes that little bit
>of nastyness and I thank heaven for it.

How does it remove the "nastyness"? If you aren't able to buy it, you don't have it - not matter how the sale was conducted.

>I've found some
>rare and wonderful pieces for my personal collection at
>Ebay that surely would have been long-gone on a newsgroup.

So what? I have done the same thing on the newsgroups and swap pages. To say that being the "firstest" with the "mostest" is wrong . . . . . is simply un-American!! And, in reality, the auction is the seller's forum. This is especially true with reserve price auctions and, even without reserves, the seller is allowed to bid once in non-reserve auctions. So, there is no risk (only reward) to the seller with either method!!

>More importantly-- the "takes too long" argument doesn't
>hold water. As a kind person wrote me in email:
> "I don't understand these people complaining
> that Ebay auctions take too long. They can
> use the search filters to read auctions ending
> that day, or even auctions ending in the next
> couple of hours!"
>So, for those who do want instant gratification, there
>is, in effect, a fast-paced auction every single day.
>And it has much, much more stuff up for bids then any
>ham auction I ever attended.

You know, to me, it is kinda like sex by wire . . . not too much to get excited about. And, in reality, all of this "auctions are good- auctions are bad stuff" is beside the point.

>>Sounds like some kind of socialistic concept!
>>What ever happened to "first
>>come, first served"?
>That concept works fine at, say, a hamfest.
>Every person has the same chance to get his behind in
>gear and get there early and make deals.

Really? What about those who are at home bidding on eBay? Or working or sick or out-of-town? I think we ought to make all sales at hamfests two-week-long

auctions!! . . . Boy, that would sure fix things . . .

> Not so
>on a news group. The lazy person might see an ad days ahead
>of even the most gung-ho bargain hunter.

How? Does the lazy person automatically have higher speed or more current
access to these groups? If so, being lazy, I am getting ripped off!!!

> That, in my opinion, is morally wrong because it can reward
>the unworthy and punish those who work harder.
>It's happened to many of us here. The auction
>removes that problem, too. Everyone who has the
>earning power to buy has an equal chance.

Again, how? If I am unable to read the newsgroups, then how can I visit
eBay???? And, what if I am out-of-town, etc? The only way to do what you
advocate is to make the auctions last forever!!
I mean, you do want your great-grandkids to have a shot at that 1981 Heathkit
catalog, don't you? : -)

>>You said: "I've already answered this a dozen times in a dozen
>threads."
>>Did you ever stop to think that maybe the reason this topic keeps
>coming up is
>>that it is just might be a valid complaint?
>Nope. Never occured to me for an instant that it might be valid ;-)

Judging from the recents posts on the subject, perhaps you should reconsider?
Ever heard of the "court of public opinion"?

>>>If the person bid more then they wanted to pay, who's fault is
>that???
>>Well, now - that is quite an odd position for the defender of the
>"great Free
>>Market" to take.
>How so? "Freedom" means freedom to be stupid, too.
>One pays for one's emotional, bad judgements.

Gee, and with all of this talk about sharp traders taking advantage of widows,
etc, I thought you wanted to protect folks from all things bad!!

>That's how (some) people learn.

Could they also learn to be one of those "sharp" newsgroups traders by learning
from their mistakes?

>>Did you really mean to say that shill bidding is OK since no
>>one is FORCED to bid higher than the shill??
>Nope. Read again. I said it was stupid and self-defeating.
>Not "morally wrong." That's emotion talking again.
>I said that if you are willing to pay "x" price,
>and you win the auction, then any shill along the way is
>a non-problem. If you pay more then you wanted, you

>must be responsible for your actions and stop blaming others.
>If a shill runs the bidding past what you want to pay,
>the seller loses the sale. Unless, of course,
>there is someone who wanted to pay more then you,
>in which case he would outbid you anyway.
>Again, the shill is cancelled-out.
>In the long run, it is a "non-problem" from the buyer's standpoint.

I disagree. If I want an item and am willing to pay $10 max for it and the bidding would have stopped at $6 without the shill, I will pay $4 more for it than I would without the shill's bids. That is fraud. There is no other word for it. You spend way too much time defending auctions!

>>What about the statutes against
>>fraud? Is an online auction exempt?
>Is a "shill" bidder fraud in the eyes of the law?
>I don't know. I'm not a lawyer.

Yes, shill bidding is against the law. It is committing a fraud.

> Personally, I don't think they matter a bit so I don't
>worry about them. People using shills will
>eventually shoot themselves in the foot, so let them.

You didn't just lose 4 bucks, either!!

>>..., when coupled with the competitive
>>juices . . . folks DO pay more than they should/would everyday
>>in straight sale situations.
>There's too much of this "I'm a poor victim!" attitude around today.
>If a person bids more then he should,
>HE IS RESPONSIBLE. PERIOD.
>It's about time people stopped pewling and started
>cleaning-up their own messes.

And this, from the defender of widows and newbies!!

>>Why do you think it is referred to as "competitive bidding"?
>And what's wrong with competition?? Lord, the whole universe
>works on competition! Don't tell Mother Nature, WalMart
>or the NFL that competition is bad. That's how things improve.

Nothing wrong with competition. It is the effect that it has on your ability to make good value judgements that I am pointing out. You know, competition at auctions is really based in jealously. And, how many really jealous people have you seen that were in control of their faculties??

>>>>... if you don't like the bitching, don't post the eBay stuff
>here!!
>>>Nonsense. That's like telling me I shouldn't advertise in
>>>a newspaper because someone whined to me about it.
>>But, you told the rest of us "If you don't like it.... don't read
>it."

>>Why is it OK for you to say such and not for me to do the same??
>This isn't "tit-for-tat," Bill.
>You said, in effect;
> "If you don't like a few people bitching
> about your ads, don't run them!"
>I said, in effect:
> "If you don't like my ads, don't read them!"
>Which one makes more sense to you?

Both make sense if they were *possible*!! But, how do we avoid something that is improperly labeled? And, even then, there is the non-commercial thing.

>>You mean eBay is not the ideal means of doing business?
>Heck, no! I wish I knew what *was*, because I'd be
>able to actually find, recover and fix radios as a business
>and let it pay all my bills. I'd love doing that.
>It's simply the best thing going right now.
>IMHO, of course.

You know, I am glad you said that because, otherwise, I would have NEVER guessed that you felt that way!! : -)

>>I will agree to disagree with you. ...
>>And, it is not that I don't like you; we probably have a lot in
>common. We
>>simply disagree about the propriety of such postings to these
>newsgroups.
>>
>>... if you eBay guys would practice a little "honesty in advertising"
>>and ALWAYS use "eBay" as the first word in your subject lines.
>>...it would be a simple courtesy that would probably go a long way
>>toward settling this matter until we are able to
>>find a more definitive permanent solution. What do you say?
>At last we find a point of agreement,
>though I like "FA:" better and will use it.
>I can't force anyone else to use an auction flag in their posts,
>but I very much support it.

Great, that is a good start. I hope that we can do even better down the road. And, I wish I could use a real news reader . . . .

>Thank you for the spirited debate, Bill.
>I hope we can let this rest and practice
>"peaceful co-existance" ;-)
>
>73 DE Dave Stinson AB5S
>arc5@ix.netcom.com

You are welcome. And, I'll do my best to avoid stepping in any eBay stuff!!

Anyone tell me anything about an Icom IC-970? bands covered?, all-mode? when made? what one might be worth? accessories? any good?, whatever you know...

I saw a reference to the radio in Amateur Radio Trader, and it mentioned that it operated at 1.2Ghz. Kind of got my attention, and I would like to know more about it.

Please post to newsgroup.

Thanks in advance for any help!

It comes as standard with 2M & 70cms.
Options include a built in AC mains supply,23/24 Cms & 13 Cms modules,
a general coverage rx from 50-905 MHz (AM,FM & wide-FM but no SSB)
& an ATV module (old-fashioned AM modulation video -in Europe most of
this
is FM Video so no use to me).
I have the AC power supply,23 cms & generla coverage options.
It's a physically large box but at leat it's all in one unit.
They stopped importing the IC970 into Europe a couple of years ago
-special
order only.It's probably still on general sale in USA & I'm glad I
bought one.
It gives me all modes on 3 amateur bands.
Try ICOM's website for more details.

1539. Re: Need Info. for TUBE842

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-04-30 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <1998043012552800.IAA26635@ladder01.news.aol.com>
Source record: 105991

From RCA Technical Manual TT-3: (1938)

"842 is a low-mu, three electrode tube of the thoriated-tungsten type for use primarily as a class A power amplifier.

Characteristics:

Filament Volts (ac or dc): 7.5
Filament Amperes: 1.25
Amplification Factor: 3
Grid-Plate Capacitance: 7 uuf
Grid-Filament Capacitance: 4 uuf
Plate-Filament Capacitance: 3 uuf

Maximum Ratings for Class A Service

DC Plate Voltage: 425 Volts
Plate Dissipation: 12 Watts

With a plate voltage of 425 volts, a grid bias of -100 volts, and a load resistance of 8000 ohms, the 842 is capable of giving an undistorted power output of 3 watts."

Standard 4 pin base. Pins 1 and 4 are the filament. Pin 2 is the plate, and pin 3 is the grid.

Source record: 105994

Hello again Bill,

Here's Part 3

Some pointers on older/vintage tube gear.

At all times, safety must be a prime consideration. Even a low power rig like the DX-20/HX-11 can kill you if you get across the wrong voltages the wrong way. It may look harmless, but it's not!

Old gear usually has an old 2 wire line cord. Look at the cord and plug carefully for cracks, frayed insulation, etc. If it's in any way suspect, REPLACE IT. Some folks prefer to replace with a modern 3 wire line cord. If you do this, be sure to wire it correctly: Green wire to ground/chassis, Black wire to the switched/fused side of the line, White wire to the other side.

If you decide to stay with 2 wire power cords, a separate ground wire is a must. Here's why: If a short should appear inside the rig, the entire chassis and cabinet could become energized and dangerous or fatal to touch. Here at N2EY, I use 2 wire power cords, and a heavy ground wire to every metal chassis in the shack. And the ground wire is always the first wire connected and the last wire disconnected, while the power cord is the last wire connected and the first wire disconnected.

The DX-20 has some serious voltage and current at the key. One side of the keying circuit is grounded, while the other is not. Most keys have a metal lever and other parts, including the base. Make sure these parts are connected to the grounded side of the keying circuit.

Tubes and some other components in vintage gear can get HOT, not just warm, in operation. Let things cool off before you touch them. Not only can you get seriously burned, you're liable to drop the hot item and break it.

Filter capacitors can hold dangerous amounts of high voltage for days. Even though the DX-20 has bleeder resistors to drain away the charge when the rig is turned off, always check that the HV is zero before touching stuff inside the rig. I always short both ends of filter capacitors together with a heavily insulated wire to be sure.

Tubes take time to warm up - allow 30 seconds to a minute before trying to use the rig. This may seem simple, but I've seen many folks mystified when they turn on a piece of tube gear and nothing happens! Some folks have even returned equipment as defective because they plugged it in, turned it on, and nothing came out of the speaker right away.

Crystals can be obtained from many sources. Bry, AF4K, has a webpage that lists plenty of suppliers, and hams who trade crystals as well.

The DX-20 has a wide range pi-network output. In many cases you won't need an antenna tuner or Transmatch. I used mine to directly feed a 90' end fed wire. The shack was in the basement, so I could get a good short ground lead. You can also use a lightbulb as a dummy load, and actually "see" the RF power output.

Good luck with the rig. If I were you, I'd post a request for the manual, asking for a copy of the schematic and tuneup pages only.

73 de Jim, N2EY

Some gear isn't fused - it's a good idea to add a line fuse rather than rely on the house fuses or circuit breakers

From: "David W. Fleming" <davefleming@novagate.com>
Message-ID: <6iac7e$9gt$0@205.138.137.161>
Source record: 105997

Hello Hams and tech. wizards.
I am having some difficulty here with this old Tempo One transceiver.
The Carrier(dual) oscillators(12AU7) is functioning beautifully, and I
notice that they are switched on alternately by the use of the REV/NORM
switch position. However, one oscillator is fully attenuated in one
postion, but not in the opposite condition.
The whole problem is this:
Receive, any mode, NO drift.
XMIT any mode, including Tune postion, Transmit frequency is "pulling" down
via some unknown problem. If the relays are de-energized, and transmitter
is again keyed, the Transmit frequency is right back to it's starting
origin point, but rapidly drifting down in frequency.
The carrier appears solid, but the VFO frequency is sliding on transmit or
tune. Been a while since I got into RF troubleshooting, as I am pretty
much stuck in industrial/digital stuff these days...
Any help with this nice old rig would be greatly appreciated. Thank you to
all others who answered an earlier post of this same problem!
73,
David Fleming

Source record: 105998

Hello Rob,

I have a Farnsworth BC-342-N receiver too! Big and heavy, but works pretty good for its age.

These receivers were used by the U.S. Army (Signal Corps) as receivers in field setups. Their most common usage was in a truck in combination with the BC-610 transmitter. This setup was called the SCR-299, and was used in all Allied theatres in WW2. Another common setup was to combine the '342 with the BC-191/375 transmitter.

The receiver is a single conversion superhet with 2 RF and 3 IF stages. The '342 sets have a built-in 110 VAC power supply. I don't have a manual, but I do have a schematic and some conversion articles. If you want copies, just send me a large SASE with 3 units of postage on it, and I'll copy everything I've got for you.

Prices on these sets vary all over the place, depending on condition. I got mine for a very low price, but that was years ago. If it's in good shape and working, I'd say it's worth $50-100 at least.

Message-ID: <3548cbf1.5364970@news.sol.no>
Source record: 105999

Somebody keeps insisting on seing strange things, the next to hear is maybe that the earth is flat, "it might perhaps seen like this in USA when you grew up".....? Whether you are a professor, president or whatever, it is just not important. Please stop the nonsense, I feel too many posts are met by persons who really have nothing to add, they just believe, don't know or have a weak memory of some nonsense.

I do not see any use of a lengthy so-called discussion with somebody who do not care to check the instruction, perhaps they do not understand how to read circuit diagrams, study photos, or they might not understand the English language. I have no difficulties in quoting text from ......

Drake 2-B
instruction Book
page 16

RF amplifier
......
The secondary of antenna coil and the plate circuit coil primary are tuned to resonance on forty meter and the B-bands by ganged capacitors C-3A and C-3B. This capacitor is tuned from front panel and marked PRESELECTOR.
The Preselector is made to tune the other ten bands by switching, with the band switch, capacitance or inductance shunts across the antenna coil and the RF plate coil primary as needed to raise or lower their resonance.

Understanding some electronics, it is easy to understand the impossible task of tuning Drake 2-B between 3.5-30MHz in one range, about 75:1 capacitance (or inductance) ratio is needed

If R.L.Drake tried to do this, the earth is probably flat in the USA....

Face it guys. The news groups used to be the apex of internet communication. Now balkanization via mailing lists and chat rooms and who knows what coupled with a distinct lowering of standards resulting from a relaxed entry requirement (shades of CB radio) has reduced them to a mere shadow of their former usefulness.

The public forum via newsgroup is dying.

I hang on because I figure once the low point of anonymous postings of directed sets of four letter words passes, things will get better. As one ages, the 'I'll never die, always an optimist' gene is supposed to lose it's power. We'll mines stuck "full on" :-)

I've participated in newsgroup discussions since 1983 when almost all participants were educational, government, or government contractor.

As for Ebay and other suctions. It makes sense in light of all the moaning by potential buyers, to do what they ask and post

Subject: SUX2000 with all CW filters for sale at auction.

If folks want to mess with an auction, the can read the message and see where the auction is and go mess with it. Everyone else can filter the messages (this has been easy to do since I got on the internet in 1983).

Hey gang, here's a boat anchor to work on your boat anchors with. And it's not on eBay - yet! Someone buy it and it won't be there.

This is a late '40s (probably) vintage Navy sig genny, all vacuum tube design. Covers 15-400 MHz in six bands. Automatically levelled output into a calibrated attenuator with a range of 0.1 uv to 100,000 uv into a 50 ohm load. Modes of operation: (1) CW; (2) AM @ 400 Hz, 0-50% modulation; (3) FM-sweep. Sweep width is +/- 2% to +/- 20% of center frequency. Built-in markers at 0.2, 1.0, 5.0, and 20.0 MHz. Has built-in 5" scope for viewing the bandpass of the equipment being tested. Decent cosmetic condition and everything works, although the retrace blanking on the scope could be better. Comes in its transit case CY-1941/TRM-3 which measures 18.5x20x21 inches. Approx shipping weight 100 lbs. Asking $75.00 plus UPS shipping from Mobile, AL 36605. Manual available from Fair Radio Sales.

Thanks for reading!

Ed Greeley

>They may not have been mentioned in QST, not even have been offered for
>sale in America, I see at least a reason why you find it highly suspect

Not at all - that has nothing to do with it. You just like to say controversial
things to see if you canget an argument going.

Maybe we have a language barrier here, JM.

I know nothing about German WW2 radios. I have no interest in them.
Your claim that they are better than Colins, sounds like no more than a
schoolyard taunt! I don't really CARE one way or the OTHER!!

Saying that your provocation sounded "suspect" has nothing to do with
QST or anything I have seen!

1561. FS: 19" Racks-dual or single

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-01 00:00:00 UTC

Message-ID: <19980501124431100.IAA21168@ladder03.news.aol.com>
Source record: 105921

Have a dual or can be used as single racks for sale.
Color is beige panel area and brown sides, top and rear door.
Has 10-15 degree slope at the top.

Total overall dimensions of both units together are:
55" high X 28-1/2" deep X 47" wide

Total dimensions of single unit is:

55" high x 28-1/2" deep x 23-1/2" wide.

Both units accept standard 19" rack panels.

Both units have blank panels install on the bottom. No panels on top area.

Bottom of unit panel space is - 21"
Top of unit panel space is - 21"

Removeable side panels.
Hinged rear doors.
Top covers is removeable. One unit has vented cover other has solid cover.

Slopping top panel = approx. 10-15 degrees. excellent veiwing angle.

Units are seperated for transporting or shipment.

Approx. weight of each unit is 65-70lbs. Total 130-140lbs.

Units are in excellent condition with few scratches and are very clean.
I do not know who manufactures these units but they look like either Bud or
Premier. Quality is excellent. I removed these from a studio a few years ago
and had intensions of using as a staion console.

Can ship or can be picked up.

Price=$250.00 plus shipping charges.

Thanks for reading this add and 73 Dave K4DLJ Darlington, SC

I am looking for recieving tubes to use as spares for a number of items such as collins gear, various test equipment, etc. Does anyone know of good sources (dont cost an arm and a leg)? I have found the following sources via search engines, but there may be some I dont know about:

Emodus
EHman
SND
ESRC
Radio electric supply

These appear to be good sources with decent prices, but limited stock. I would like to find more sources. Im not interested in someone selling 12Au7s for $50. Thanks for any help
Don

WEIRD?:
RCA NUVISTOR 6DS4
RCA NUVISTOR 13CW4 [2]

junk:
7-pin to octal adaptor
12-pin tube socket

INFO:
I did not collect these, so I don't know how they were collected. Each one
is almost definitely pulled from used equipment, often from discarded
equipment. Some maybe were set aside when a less-than-new tube was replaced
with a newer tube. Others may have been purchased as spares for equipment.
They could be from radios, TVs, 120VAC stuff, battery stuff, from the '30s
to the '60s. Dusty, etc., almost none in boxes.

All have intact envelope and probably passed filament and functional tests
20 years ago.
I tested about 20 units on an antique tube tester; one had open filament, a
few seemed to have zero response compared to other units of same type.

How you use these is up to you; if there's equipment you can restore with
them, more power to you. These'll cost a lot less than new tubes (if new
tubes are still made.)

1586. Andy Ross Warning

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-01 00:00:00 UTC
From: crslex <crslex@iglou.com>
Message-ID: <354A44EA.5D99@iglou.com>
Source record: 105946

Here's what can happen if you deal with an a**hole on the newsgroups.

I was interested in a Yaesu FT-101ZD he was selling, but I was also checking
out a Kenwood TS-820S. I kept asking Andy Ross if the FT-101ZD had ever been
tampered with by any CBer's (CBer's like FT-101's and they will sometimes
monkey around with the RF circuits in their vain attempts to get more output
power from the radio). I kept asking, but he wouldn't answer me about this
issue. Maybe it was never used on CB.... but he wouldn't answer the
question. So I decided to go with the Kenwood.
Here are the E-mail exchanges:

Andy Ross (seller of FT-101ZD) wrote:
> > ok send the money order and correct billing address and i will ship it. Andy
> > Ross

Mark KB4AEP wrote:
> Sorry Andy, after comparing the features of the Kenwood 820S and the
> 101ZD, I decided to go with the Kenwood as it has more features and
> better specs and it was cheaper. Your radio is a good deal though so I
> am sure you will sell it soon. Hope you're not ticked at me, but I
> wanted to get the most bang for my buck. Thanks and 73's.......
> Mark KB4AEP

> Andy Ross wrote:
>well i hope you get what you want . I am glad you took the other radio . CBers
>like you deserve what you get Sorry I wasted my time with trash like you.....

Watch out for this guy, he won't be straight forward and he gets mad easy.
As a buyer in a free market, I have a right to choose who I buy from.
The seller shouldn't get mad and act like a child, there are other buyers out there.

Mark........KB4AEP

1587. Re: FS: Hewlett-Packard HP-410C VTVM w/R F Probe

This fine instrument is good for working on all the new junk as well!
AC Probe is good to 700 MHz!! Like mine just fine!

1588. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6ib7dk$96e@news.Hawaii.Edu>
Source record: 105948
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

I have looked at Ebay on occasion and have even made bids on a
few items. From what I have seen most things sell for far more than
they are worth or close to a new price. People are caught up in a
bidding frenzy. It's all about making money. A lot of " Dealers " have
obviously figured out that they can reach a lot of people through the
net and find a buyer for just about anything . I am guessing but I
bet the biggest supporters of Ebay on here are sellers, not the
buyers. I don't see many messages praising Ebay and exclaiming what a
great deal was had. Fair market value my ass. Who are you kidding.
Just padding your own wallet. It reminds me of the people that make a
living of going to hamfests selling gear wrapped in plastic that they
just minutes before purchased for much less. Good old' greedy American
know how.
I know how to get to Ebay if I were interested. I don't need
messages on here telling me about the latest money gouging. I guess
may these guys are afraid they will have to sell something for a
reasonable price if they cant get enough bidders?
Now be sure to quote this message and pick it apart....sorry but
I don't care....good luck with your fortune.

Gary

1610. FS: Manuals for every Drake radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-02 00:00:00 UTC
From: "Diane M. Turini" <dturini@aa.net>
Message-ID: <01bd757c$913a1820$010ab488@matilda>
Source record: 105864
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

How would you like to have manuals and schematics for the most
Drake radios available at your fingertips?

HAManuals is pleased to announce the availability of the first in a
series of reference CDs for the radio collector and restorer. With
the permission of R.L. Drake and other equipment manufacturers, we
are able to offer a very complete library of equipment, service and
accessory manuals on CD for Drake radios.

HAManuals Series 1, the R.L. Drake Company, is a two CD set that contains:

* manuals for most Drake radios from the 1-A to the R8,
including many commercial models

* Service manuals for the R7, TR7, R8 and many commercial
radios

* modification information from Sherwood, Sartori,
Fox Tango and others

* Manuals for Drake addons and accessories, including DX
Engineering Processors and E-TEK Frequency Readouts

* the * NEW * update to Drakemod 6

* Reference data for the TV-7 and TV-10 tube testers
including the latest updates

* a bibliography of Drake related articles

* a complete list of all Drake amateur and commercial
radios manufactured

* Screen saver images of Drake manual covers

and much more.

These CDs are viewable on any computer that supports Adobe Acrobat Reader,
which is available free of charge from Adobe at www.adobe.com. Yes, you
can view this CD on MAC, PC, Unix, Linux, OS/2 and other computers.

If you were to purchase these manuals individually you would spend over
$1,000 for the complete set. Now, for the price of only 4 manuals, you
can have a reference library of Drake material, including many hard to
find manuals and schematics.

HAManuals Series 1 - R.L. Drake Company will make it's debut at the
Dayton Hamvention. Look for us in space 1129.

To order your copy, please send a check or money order for $79.95 plus $4 for priority mail shipping anywhere in the U.S. to:

HAManuals
29926 Southeast 405th St.
Enumclaw, WA 98022-7761

Washington residents please include state sales tax.

Capitol idea, Old man!

1613. FS: Heath HO-5404 Station Monitor Scope $100

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-02 00:00:00 UTC
From: flanders@groupz.net
Message-ID: <354a8261.25280415@nntp.groupz.net>
Source record: 106018
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

$100 plus UPS from ZIP 29860

Station monitor scope, with all manuals and pictorials.

Quoting from the catalog: "Continuously monitor your signals with the HO-5404 Station Monitor which displays SSB, TRAP, or RTTY. Also use the Monitor with a receiver to view audio signals from other stations, or as oscilloscope for testing. Solve many common problems such as improper alignment or tuning, insufficient or excessive drive,..."

As an audio oscilloscope, it covers "... 10 Hz to 40 kHz with good sync capability..."

You can add the optional HOA-5404-1 Pan Adapter Module (not included) to also give it panadapter capability and "...view other signals within +/-20 kHz or +/-100 kHz from the (operating) frequency... ..with IFs of 3.395 MHz and 8.83 MHz."

Color and style matches all the brown Heath gear from the mid-80's. Works good.

120VAC power.

Jerry W4UK South Carolina

1616. HELP!!! HAMMARLUND HQ-140-Q

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-02 00:00:00 UTC
From: bierbier@bellsouth.net
Message-ID: <354A9550.EF827B2@bellsouth.net>
Source record: 106021

I have a Hammarlund HQ-140-X and I cannot find what the
problem is. It is driving me crazy! I got finished replacing some of
the capacitors and I noticed now and then that the signal would drop a
little and would get distorted. I thought it would be the RF amp. tube
but I replaced that and it does the same. Now whenever I tune in a
strong signal the signal distorts and sounds like crap (it almost sounds
like you turning up the limiter on the R-390A clockwise). When I turn
down the sensitivity control (the S meter from a S4 down to S2) the
thing sounds great! Like I said it is driving me bonkers. If anybody
has this radio and can give me some advice please email me.

Thanks,

Gary

For Sale - Must move before Dayton - Would rather ship UPS than carry to flea market!

Heath SB-200 1 KW amplifier, 80 thru 10 meters, in excellent condition. Full output 572Bs in final (800 watts out with Collins 32S-3 driving it). No manual.

Front panel, knobs and meter are immaculate, cabinet has no dings or scratches - just a couple of typical slight "age spots" that Heath cabinets get.

Asking $325.00 plus shipping from 44134.

CBers wanted the early FT 101 models that had the 11 meter band. The
FT101ZD does not have 11 meters. I have never heared of anyone
modifying a FT101ZD to work on the CB band.

Hi, thanks for reading this post.

I have a set of Drake Twins with power
supply/speaker for sale or trade.
They are, T-4X R-4A and MS4. These units are
very nice, all are 8's or 9's inside and out.
They worked well the last time I used them which
was a few years ago. They have been well stored
and are clean.

I am interested in taking bids on this set and
will have pics available soon
for interested parties. I would also consider
trading for some QRP equipment and or kits. If
interested please respond by e-mail to
<bwyatt@onenet.net>
I will not be in a hury to part with these rigs
however, they will go to Dallas in June.

Thanks Bill N5WO

>I know nothing about German WW2 radios. I have no interest in them.
>Your claim that they are better than Collins, sounds like no more than a
>schoolyard taunt!
Well, I am not sure why. Operational performance on ssb is much better
with any Drake receivers, compared to the ssb receiver 51-S. If Collins
engineers were so outstanding, why not build a decent SSB receiver?
According to my handbook, the 51-S was manufactured until 1976.
>
>Saying that your provocation sounded "suspect" ...

This may sound as a provocation, but it is not, it is my opinion based
on experience working as technician at shortwave am/ssb/cw radio
stations(LGB/LGQ, LGR/LGZ) and being licensed radio amateur since 1966,
and shortwave listener since 1959..... The Swedish shortwavestation SAG
used Drake R-4B receivers, but we used Collins and Racal, and few
Plessey and Eddystone receivers, but of course the Racal RA-1772 were
outstanding and had very good performance for ssb as for cw. There were
a few Drake RR-1 (coast stn version of SPR-4), but the operators found
it too difficult to tune the preselector, so they told me that it was
too complicated to operate.

I found it very interesting to modify a Collins 51-S to achieve the best
ssb reception I have ever experienced, but any unmodified 51-S is still
not much good for ssb.

Assuming you still live in the second FCC call area, you are
probably hearing The Overcomer Ministries program from a
Deutsche Telekom transmitter site in Juelich in Germany.
Brother Stair can be easily recognized as one of the more
strident of the radio-religious-rabble.

Before you get all upset, this frequency is OK for
broadcasting in Europe per ITU bandplans to which the member
countries subscribe.

From: n3ab@fast.net
Message-ID: <354eb96d.587550@news.fast.net>
Source record: 105866

I have the following for sale:

Lafayette model 390 "Starflight" 90 watt, crystal controlled transmitter. Covers 80, 40, 20, 15, and 10 meters. Fair cosmetically with some slight rust marks on edges of side panels. I'd rate it a 6 out of 10 right now, but should clean up with some TLC. This transmitter is the same green color that their "HA" series receivers were. No manual and I did not test or even plug in this unit. Asking $60.00 shipped to lower 48.

Lafayette HA-50A, 30 to 50 MHz tunable receiver. Looks good and seems to work OK. No manual. 7.5 out of 10 on appearance. Asking $35.00 shipped to lower 48.

Heath AR-3 receiver. Knobs not original. Case has some minor wear/scruffs but not too bad. Front panel looks good with the exception of some small what looks like paint speckles on one side. This may or may not clean up...I didn't want to chance damaging the panel trying. The radio plays, but it's going to need some work. No manual. Asking $40.00 shipped to lower 48.

Please e-mail if interested. Prefer money order payment. Thanks!

1666. WW 2, US spy transmitter schematic

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-03 00:00:00 UTC
From: raylarue@gte.NET
Message-ID: <354BD715.E71D0FD7@gte.net>
Source record: 105871

I have WW 2 spy transmitter which was part of standard issue for OSS operatives who went behind enemy lines in Europe.

It is marked with "SST-1-903". It uses a single xtal controlled 6L6GT and is quite compact and beautifully built. It is in very good condition. I believe it used 6 and 90 v batteries. It is band switching from 3 to 14 mHz and has a built-in key. I would like to get it operational and demonstrate it a little for field day. It will make a great conversation piece for new and old timers.

Anyone around recognize the transmitter or know anything about it? Better yet, anyone have a schematic? Please forgive the multiple postings.

Would also like to find a couple of 40 meter CW crystals for it.
73,
Ray, W4BYG

Greetings Antique Radio Collectors!

The Antique Radio Collectors & Historians (A.R.C.H.) of Greater St. Louis would like to invite you to their Spring Swapmeet & Picnic, Sunday, May 17th, 1998 at Paul Schroeder Park in Manchester, MO.

Directions to Paul Schroeder Park: I-270 to Manchester Rd (Hwy 100). West on Manchester Rd. to Old Meramec Station Rd (first street west of Hwy 141). South on Old Meramec Station Rd to the park. Event is in large pavillion west of swimming pool.

Visitors are welcome and encouraged to bring items to swap!

NO SWAPTABLE FEE. PLEASE BRING YOUR OWN TABLES FOR SWAP ITEMS. A nominal $3.00 donation is requested to cover the cost of the barbecue. The swapping begins at 9:00 a.m. A picnic lunch will be served at 11:30a.m. Partial Activities List:

*Swapmeet of Radio/TV/Antique Electrical Apparatus
*Raffle of Radio & Radio-related items!
*Barbecue Pot-luck lunch (please bring a dish)
*Antique Receiver Demonstration

For More Information, please contact:

Derek Cohn - WB0TUA
23 Topton Way #1E
Clayton, MO 63105-1662

Yep, S-Meter was the key...

Your AGC (Automatic Gain Control) Tube electron emission is weak. Just enough to turn down the gain in the RF Amp on weaker signals but not enough for the stronger ones. Strong signals come in and flat top the RF Amp causing the distortion you are hearing.

You should check your AGC tube. Actually, you should check all of your tubes every few years.

Hope that helps. -B

I believe that I still have some am xtal filters as well as some
cw filters for the 101's. I also have some aftermarket boards to
ehance the rcvr gain and agc circuits in these as well. I probably
have a few other things like all the card extenders for this and
other Yaesu's. I have several extra service manuals for the 101's
too. At this time I think I have the 11 meter xtals but not 100%
sure.

Source record: 105899

I have for sale:

75S-1 CCA vg $350 with original Collins manual (not a copy)
32S-1 CCA vg $350 with original Collins manual
516F-2 power supply also CCA vg for $100 with the 32S-1 or after it sells. No cabinet, but will include a rough but restorable cabinet with decent R/E panel but no trim ring. With original Collins manual
312B-4 w/e CCA vg $200 with the 75S-1 or after it sells. With original R/E Collins manual

All is in excellent working condition and sounds great on the air.

I will also have a vg w/e 30L-1 for sale for $600 with an original r/e manual.

I have several items of Collins literature that I can sell or will use to sweeten any deals. Logs, equipment catalogs, brochures, catalog sheets, etc. including KWM-2 and KWM-380. Also have sales literature for 51S-1 and Collins commercial SSB equipment.

While I would prefer to sell this equipment as a package I will listen to all offers and can deliver it a fair distance if it will help.

Thanks and 73,

Michael:
Do yourself a favor and take them to Ebay and list them
under "audio" gear. I don't think you'll get $200+
but you will get a fair and reasonable price for your tubes
from the audio market. You won't on the radio newsgroups.

I hate being forced to sell tubes in the audio market,
but I have a family to feed and can't afford to
give charity to grown men.

I sure wish I had been at that flea market. I'd
have bought every one the man had and blessed his
name and lit a candle for him or something.
I'd pay a month's worth of kid bills!

Is there any interest in a W.E. 1KW AM broadcast transmitter? Might I add that this thing is big and heavy? It's about 7 feet tall and 4 wide...

It uses 833's for the outputs and the modulator. Nameplate says it's good for 500kc to 3mc, so wouldn't need much modification for 160.

Appears to be complete and powers up; needs finals, but I may be able to round some up. Documentation is included.

It is part of an AM broadcast station that a partner and I am buying; I expect to close on it sometime around July 1st. There is a more modern Collins transmitter on the air now; I expect to replace it with a solid state and move the Collins to backup service; the W.E. will be surplus at that time.

I'm open to suggestion...

Thanks and 73,

Travis N5AY

^^^^^^^^^^^^^^^^^^^^^^^^^^^^
Bingo! Ebay works exactly like any other auction.

A lot of " Dealers " have
>obviously figured out that they can reach a lot of people through the
>net and find a buyer for just about anything . I am guessing but I
>bet the biggest supporters of Ebay on here are sellers, not the
>buyers.

I sell quite a bit on Ebay and yes it works great for selling. Don't
go to Ebay looking for a bargain as it just won't happen. There are
other less popular auction services that do have quite a few bargains
due to less bidders.

I don't see many messages praising Ebay and exclaiming what a
>great deal was had.

Again, don't look to Ebay for bargains.

Fair market value my ass. Who are you kidding.
>Just padding your own wallet.

Sure why not? Selling on Ebay enables lots of persons to afford more
toys for their radio hobby and then sell them when they are bored of
the items. If somebody feels that they really want something badly
enough then they will get the winning bid. Though if you watch Ebay
close enough, you will see that not all items go for outrageous prices.
Some items just arn't very popular and they will sell for quite a low
bid.

It reminds me of the people that make a
>living of going to hamfests selling gear wrapped in plastic that they
>just minutes before purchased for much less. Good old' greedy American
>know how.

I don't see that similarity here. Ebay buyers typically will win the
bid and wait for the item via shipping. I suspect that they don't jump
right in and resell the item as soon as it is received. Are you going
to knock all the antique dealers around the country? All the
pawnshops? Flea markets? Trade shows? Garage sales? All of these

have persons who buy low and sell higher. I wouldn't limit it to "Good old' greedy American know how", its the way you make money in business selling a product. Unless you are selling a service then you are working for wages.

I suspect that most of your anger is from some Ebay users posting things for sale in the various groups. This I don't do. Its bad netiquette and pisses everybody off. If somebody is really interested in getting something they will do a search of Ebay for the item.

Nice looking key, similar to one I still use except for the layout of
the hardware around the pivot points. Mine has a serial number of
102059. Anyone have any idea when it may have been manufactured? Where
his has a horseshoe shaped arch over the pivot mine has a triangular
horizontal three legged arraingment. This one however isn't for sale I
would just like to know where I could find out more information on its
origins!

Tnx

Keep in mind that in Europe (ITU region 1) the band of 3900 to 4000 KHz is assigned to broadcasting.

Here on the eastern U.S. coast, I've heard many broadcasters in this band. I've got a QSL card from Radio Swiss International a few years back. I wrote to them mildly complaining about their QRM and they sent me a QSL and thanked me for the reception report of their "test" transmission. :-)

You know, I really didn't want to start another thread, and I would
have responded privately if it weren't for your cowardly
hidden email address.
But you're not about to piddle on my leg without a response, sir.

Since when is the sale of one's personal assets for their
fair market value unethical? I guess anyone who isn't
selling something to *YOU* at a huge discount is unethical, right?
Or are *YOU* now the judge for what is "fair?"
Well... sound the trumpets and doff your hats!
Another Johnny-Come-Lately rises to defend the hobby!

Gosh... I always thought that if a buyer and a seller
freely agreed, that was "fair," and the whiners on the
outside had no business whimpering about it.

I alway thought friends and comrades in any field, BA
included, respected and treated each other fairly.
That means they understand that their assets have value
and trade near that value. Since you don't like it when
the two people actually involved decide that value,
I guess I better check your arbitrary party line, huh?

Just where were *you* when it came to contributing to the BA
community?? I've written literally *hundreds* of messages on
BA forums and countless personal emails, helping other BA
people with information about my field of expertise
WW-II Military) while lurkers like *YOU* sit there
and suck it up, never contributing a blasted thing.

I climb through dusty, dirty, nasty and dangerous places
saving radios and equipment from the dumpster and making
it available to the BA community. I suppose I should
just give it away to *you*? Well, there's one problem
with that. I'd be bankrupt and the radios would
go to the dumpster. Not a good idea. Better that someone
actually pay a fair price. That way I can get MORE BA radios
and make them available, too.

You won't get *you're* sorry butt out in the heat and
dirt to recover this gear, but you'll sit in your
comfy chair and criticise and bitch at the people who do.
Thanks alot-- you're really helping fellow BA people--
you betcha.

I've given away countless items, often including the postage
to send them, and am glad to have helped. Where were *YOU*?
I've contributed valuable information on BAs. Where were *YOU*?
I've recovered and distributed rare equipment to other BA
people for their personal collections. Where were *YOU*?
I've risked my money and my personal safety to
save equipment and parts from the dumpster.
That sounds like a contribution to most people. Where were *YOU*?

You're just POed because someone doesn't tickle *YOUR*
hot spot with some nice piece of gear for free.
Your crybaby attack and lack of contribution to the community
says much more about you then me, sir.

Lost the respect of a cowardly, non-contributing lurker?
Glad I haven't lost anything of real value.
Except maybe my temper.

I went to "SSB School" at their W. Nyack factory in mid-60's.
Does anyone have a copy of their "Single Sideband" book by Bill
Henneberry (maybe spelled wrong)?

Spent a lot of my Navy time tuning FRT39 (10KW), FRT40 (40 KW), and
FRT62 (200KW) transmitters. Pretty lame designs compared to others
like Continental, but someone (Dixon?) had a lot of political pull
with Navy procurement, so they sold a tons of them.

Hi Jeff!
I should of been a little clearer:

>> Vintage station accessories (keys, mikes, etc.)
>> **Boatanchor ONLY buy/sell/swap**
>>---
>>* added

>When was this added? The charter mention that ads are to QSY
>to rec.radio.swap.

The "* added" ment only that I had added the ** as emphasis, to point
out the specific line of information in the FAQ.
AFAIK, this has always been in the FAQ.

>>Since Nick England wrote the FAQ, I think we can assume the charter
>>(Which does exist, Rick Stealey wrote it,) allows the buying and
>>selling of boatanchors in this newsgroup.

>Nick's FAQ is in conflict with the charter Rick wrote

Hummm, perhaps your right, I don't have the charter archived here.
Should take it up with Nick....
He has been posting it about monthly since this group came on line,
and asking for additions and/or corrections every time.

1716. Noise from new tube.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-04 00:00:00 UTC
From: Steven Ensley <steve@globaldialog.com>
Message-ID: <Pine.BSI.3.91.980504074945.20881C-100000-100000-100000@msn.globaldialog.com>
Source record: 105827

I was told by another reader of this group in regards to the 8122 finals in my Hallicrafters SR2000 that if I remove them and shake them, if they rattle then that is a good sign that they are bad. When I did this, one was silent and the other maid a quiet metalic twang or vibration when shook gently. Other tests and the boneheaded manuever that took out the transmitter in the first place convinced me that the tubes are in all liklyhood bad so I arranged with still another member of this group to buy some new 8122's that he had on hand. When they came I applied the same shake test. Again one is silent, but the other makes a mild metalic twang or vibration when shook. Is this test valid or conclusive? A friend has a portable tube tester but it will not test this particular tube. Would one of the big standup ones at radio recyclers in Milwaukee probably do it? Should I go ahead and try these tubes? Should I try the silent one with the silent one still in the radio?

Steve

Source record: 105828

Jeffery has kindly made the Ebay issue a moot point.
I had no idea that the FAQ didn't agree with the charter.
The charter must govern, and it prohibits For Sale
posts of any kind. Therefore, all future sale posts
should move to R.R.Swap.

Too bad! I have some good Nationals, Drakes and
Hallis available. They'll be buried in the
noise of people selling blow-up
love dolls and the like on R.R.Swamp.

I urge all people with things to sell to
post them elsewhere.

Hummm, can you help clear up my confusion?
Just which side of this issue are you on?

Bob,

I used one of these in the mid 70s and I do not think that the same
company who made the SBE 33 and 34 made this unit. It worked ok, but the
nixie display was annoying at times. This is one rig that you do not hear
much about or see at hamfests. I do not think they made a lot of them.

I have for sale a real nice National NC173 table top receiver. It is in beautiful condition and works great. I purchased this radio some time ago from the original owner. It is the best looking 173 I have ever seen, has a few light marrs/scratches on the left and right ends of the cabinet. probably from sitting beside other equipment. It is a real looker. I am asking $160 for it, and I truly believe you would have a difficult time finding a nicer one. I have the original manual but the cover is missing. Email direct if interested,thanks.

Thursday, May 7, 1998, KF2GV Jack Herrick and his legal team will take on the Town of Oyster Bay on Long Island, NY to obtain approval for his 120 ft amateur radio tower. What we need is to show support for Jack by coming down to the hearing with you amateur radio name tag on. We are not asking you to speak, just be there for support.

The hearing officially starts at 7:00 PM but since we are the last case on the docket we will not be on until after 9:00 PM. So PLEASE spread the word and do all you can to support amateur radio on Long Island.

Dave

It would be unfortunate if this were to happen. I wonder if newsgroup charters are like land covenants? Usually if they are not enforced for a certain amount of time they become invalid. I do not think that I have ever seen a for sale ad killed here (at least in 18 months I have been active on this group). I personally like the idea of boatanchor buy and sell ads in the group. It goes right along with what has become the character of the group.

Source record: 105764

FOR SALE: Collins 75S1 receiver in "unrestored" condition. The radio is a bit dusty inside, cabinet has a few minor scratches...this radio should clean-up nicely. This could be your chance to buy an S-Line receiver at a price that is much lower than "restored" units. The radio works on all bands. The only problem I can visibly see is that an aluminum cover on top of the chassis is missing...this is a square cover plate, approximately 3" X 3". All the rest of the radio is orginal. Has one filter...the SSB.

Reason for selling it: I'm really not into Collins. I have a manual included in
the deal (not a copy). Have fun restoring an old classic! Price: $250...you pay shipping.

From: k0qz@primenet.com
Message-ID: <6inp4b$3sb@nntp02.primenet.com>
Source record: 105774

Hi there fellow boatanchor rebuilders.
Here is my question.
Does anyone know of a paint manufacturer that makes an exact duplicate of the VERY dark Marroune paint that was used many of the Johnson transmitters and accessories? Does not need to be wrinkle finish as I can paint the cabinet with a wrinkle finnish paint and then overspray it with the original color. If you know of a brand and type/mix number please e-mail me the information.

Also, the transmitter I obtained was a kit and along the way, someone substituted the original roller coil tuning know with a crank type know that looks like the one off the desk KW. Was this a popular modification for this piece or ??? Does anyone have an original tuning knob they would like to part with???

Thanks in advance for you help.....

David,

Not ticked off but I have to wonder..... IMHO Ebay is slow and sometimes frustrating to use. If this is your stuff, then why not just name your price here in the newsgroup or in the other swap groups? I think that you tend to lose out on potential buyers by using Ebay due to the difficulties in using it. BTW I looked at this equipment listing on Ebay and during the session there were several times when I could not re-connect to the server, loading was very slow and reverts sometimes hung because my browser, netscape, has to connect to the server in order to bring up the cached pages during an active session. Yes I only have a 28.8 connection, but this is probably the most common connection speed on the net at the moment. However if it works for you, and you get your price, then everyone is happy.

Date: 1998-05-05 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <3551624c.2674768@news.fast.net>
Source record: 105850

I have the following for sale:

Lafayette HA-50A, 30 to 50 MHz tunable receiver. Looks good and seems to work OK. No manual. 7.5 out of 10 on appearance. Asking $35.00 shipped to lower 48.

Heath AR-3 receiver. Knobs not original. Case has some minor wear/scruffs but not too bad. Front panel looks good with the exception of some small what looks like paint speckles on one side. This may or may not clean up...I didn't want to chance damaging the panel trying. The radio plays, but it's going to need some work. No manual. Asking $40.00 shipped to lower 48.

Please e-mail if interested. Prefer money order payment. Thanks!

John Schell N3AB

I have the following ARRL publications that are duplicates to my collection. I would prefer to trade them for ones that I need, but will sell for the prices listed. Prices do not include shipping. Most books can be shipped via us mail priority for $3.

Please check out my web page for my needed QST's and ARRL publications here: <http://www.mindspring.com/~ekugrad/books.html>

1. "Radio Amateur's Handbook" 1946 "special defense edition" Very Good condition. Spine is frayed but intact. Inside front and back cover has been taped to add strength. A very nice addition to any collection.
Price $35

2. "SSB for the Radio Amateur" Second edition, 1958. Good condition. top 2" of spine split, and a 2" tear on top right of cover and second page. All pages intact, and binding is tight.
Price $7

3. "SSB for the Radio Amateur" Fourth edition, 1965. Very Good condition. Call written on cover, and a price sticker was removed form top right corner and removed some ot the page. Crease in bottom corner of cover.
Price $7.

4. "The ARRL Antenna Book" Fourth edition, 1946. Very Good condition. Small tear in bottom right corner of cover 1/2".
Price $15.

5. "The ARRL Antenna Book" Eight edition, 1956. Very Good condition. I have two of these for sale both in Very good condition.
Price $10 each.

6. "Understanding Amateur Radio" First edition, 1963. Good condition. Front cover is faded. Well read, but complete.
Price $7.

7. "The ARRL Operating Manual" Third edition 1987. Excellent condition. (This one is heavy, probably a little more than $3 shipping).
Price $15.

Even if your not interested in these books, please check out my list of needed QST's and ARRL publications. Maybe you have one that I need.

Thanks and 73's

Pre-Dayton-Hamvention Sale and Spring Cleaning

We often load up trucks full of equipment and go to the Dayton Hamvention. It's fun to meet many of the people we talk to and get away from the office. There is considerable expense in doing this and we would like to try a better way.

We have compiled a list of equipment that "would have gone to Dayton" and made it available in a file that can be sent via E-Mail, FAX'd or even U.S. Mail. We propose to make available a:

Tektronix List Available on 5-4

Hewlett Packard List Available on 5-6 AVAILABLE TODAY

Other than Above Available on 5-8

The Hewlett Packard List includes: Pulse Generators
Function Generators
Scopes
Display Mainframes
Oscillators
Analyzers
Atternuators
Counters
Power Supplies

If you would like the list E-Mailed, it is available in Excel and Test formats.

To get the list, either visit our web page http://www.valuetronics.com or E-Mail us at sales@valuetronics.com or valutron@aol.com. Tell us where to send it and we''ll attach the file to a return E-Mail.

This is a bidding process. The bid closing dates will be listed on the files.

The equipment is available to the highest bidder(s), no accessories are supplied nor warranties implied. We do offer an unconditional evaluation period on all the products.

==========
Here is a transcript of my only dealings with Sandhills

I sent the following e-mail to Sandhills:

I have purchased a used IC3240H. I can not change from VHF main band
to UHF main band. I do have the manual, which says push and hold the
tuning dial to assing the main band.

Just spoke with ICOM support (albeit only about 30 seconds) was told
to send the radio to Washington. Icom's rates are high, so I am
shopping. You have been the subject of many complimentary
e-mails/newsgroup postings on the Internet.

Before I send the radio for repair, am I missing something in the
radio's settings that may 'lock out' a band?

Thanks for your time!

I will summarize Larry's reply for the sake of space:

Larry told me that it sounded like a bad CPU, and that I would
probably be best served by sending the rig to ICOM, because his
facility wasn't really equipped for that specific task.

Then, I saw a posting in a newsgroup from Adnan (Icom Service) where
he answered my questions about the radio. Adnan stated that Icom was
aware of this specific problem and would repair it at no charge.

I verified this on Icom's website at:
http://www.icomamerica.com/FAQ/VHF_UHF.html

So I sent the rig to Icom. I also sent Larry (Sandhills) the
information that I had learned.

Then, what Larry did _REALLY_IMPRESSED_ME_IN_A_POSITIVE_WAY_!
He took his time to reply to an e-mail, knowing from my comments that
he was not going to get any business (at least this time) from me!

Here is Larry's reply, exactly as I received it:

Date: Fri, 24 Apr 1998 08:07:25
To: Scott Dickson <KD5CAS@iamerica.net>
From: Sandhills Technical <sts@ac.net>
Subject: Re: ICOM 2340H serial# 01102

Scott:

Great! Thanks for the info on the Icom. I appreciate your reply and
good
luck!

There will be a one day estate sale on Saturday, May 9, in Barrington, Illinois, about 30 miles NW of Chicago. W9TT, Bill Christman, passed away on Valentines Day. A couple of hams have priced and sorted many of the items. I offered to post the sale on the net, but cannot answer any detailed questions.

Take Rt. 14 NW to Barrington. About 2 blocks past Rt. 59 turn left onto Prospect Avenue, just across from the Ace Hardware store.
The house is the second one on the left.
146.535 talkin.
The sale will run from 10:00 AM until 3:00 PM. Ham radio and related equipment only. On site sales only.

Drake T-4xc, TR-4, R-4c, L-4b, FS-4, power supplies, and more.
Heathkit test equipment
Older 2m FM gear- mobiles and bases
Old scopes
Keyer, mikes
Antennas
MANY old chassis, homebrew projects, components
Many boxes of ????

Priced to go!

Because most ISPs don't carry it, so few people read it.
That's why it's low-noise.
I think it's pitiful that we can't post FS and FA here,
and must bury BAs in the trash on the Wrecked.Radio.Swamp

I've recently received email stating the the charter DOES
allow sales, even commercial posts! So what's the real
story?? Who's got the charter and what does it really say??

I have a Lafayette EXPLOR-AIR and am looking for informatio, any kind service or operator.

The receiver is a three tube regenerative receiver that tunes from 550 KHz to 32 MHz in four bands.

It also has a bandspread for 12.5 - 14.4 : 7.0 - 7.3 : 3.6 - 4.0 and a 0 - 100 log scale.

controls include

main tuning - bandspread - ant. tuning - bandswitch - regeneration - volume

The unit is in a 8"x10"x4" wooden box with a vinyl cover.

Thanks

Jim, K4YM

What I'd *really* like to see is the charter changed so as to allow BA ads on here. I just finished wading through 300+ ads on rec.radio.swap - really fatiguing paging through the ads due to all the non-ham gear on there. And that 300+ figure is the daily average. =:o

It would appear that ads on this NG have become part of the group's culture - it would be difficult to now tell everyone to cease and desist.

Just in case you folks aren't aware, there is a discussion taking place on .misc regarding re-organizing the rec.radio.amateur.* hierarchy. One person desires that all the groups be lumped into a single group - crazy, but true. He feels that because there is so much cross-posting taking place, that the current hierarchy is useless, and we should go back to the old days of having just one single group devoted to any and all ham topics. He believes we should set up threaded newsreaders to catagorize topics ourselves.

Please make your feelings known on .misc regarding this issue!

73,
Jeff KH2PZ

I, too, think that this should allow sales within the context of boatanchors and boatanchor related items (no computers, etc.). The other R.R.Swap is swamped with everything else of little interest to the boatanchor community. Rules are made by people and may be changed by people when necessary!

Hmmmmmmm.......'no high numbers'?? Rich, weren't you the fellow who
listed the SX-115 a while back for $750 or such? I thought that to be a
bit astronomical - probably because I'm looking for one that is
'reasonable', too.

If you still have it, I'll give you $300 for it......or, maybe I could
find a RACAL to trade? ;)

I think another poster's quote of $100 is a bit low.
More likely $200 to $300 if ABSOLUTELY mint.

The two detectors probably use two different minerals. E.g., galena for ultimate sensitivity versus silicon for stability of adjustment.

You might try posting to rec.antiques.radio+phono with a better description of the set.

10 Kw military surplus generator. 220/110 vac. 4-cyl gas engine.
Totally Self-contained. Engine runs like a clock! Gen set regulation
needs heavy load to flash the field coils but runs well otherwise. Could
probably use a cleaning of the relay contacts.

Set is on an 'un-sprung' two wheel trailer which is ok for short distance
towing... would recommend it for a long trip...

Price $750 obo. Will trade for small hf mobile.

Please e-mail responses

Wish I didn't have to sell this but a local has decided to part with his 75A4 and speaker so I must make room. I would rate the A3 a CCA Good +. All is original with Bliley calibrator, 3.1 filter, new power transformer, and original manual. Chassis is clean and without rust. Some cosmetics will need a touch up if you want it perfect. The front panel is CCA very good but the front cabinet trim has two areas at the top that need touch up.
Also on the inside of the cabinet, under the chassis, where the power transformer dripped when hot there is an area about 4" diameter that lost it's paint. Of course this is not seen from the outside but still could use some TLC. Asking $400 plus shipping from Colorado. John K0JY jwieder@rmi.net or 970-249-2751 evenings

1819. Tube data needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-06 00:00:00 UTC
From: w5ami@altavista.net
Message-ID: <6iq46f$9vh$1@nnrp1.dejanews.com>
Source record: 105805

Does anyone have tube data on the Eimac 450TL and the RCA type 849?

The 450's will be used as Class 'C' push-pull finals and the 849's are to be used as class 'B' modulators. The only data I do not have is grid bias voltage curve for the 450TL's at various plate voltages. The 849's are the mystery. I know some approximate data on them but very little for class 'B' push-pull modulators. The 849 was discontinued around W.W.II.

Any info will be much appreciated!

1820. 51J3/R-388 forsale/swap

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-06 00:00:00 UTC
From: terrybu@newman.TEK.COM
Message-ID: <6iq2uj$6l4@newman.TEK.COM>
Source record: 105806

I have a 51J-3/R-388 Collins receiver in very good working condition with top and bottom covers, no case (rack mount). Works like gangbusters. Front panel is a little faded in places but the lettering is very good. I had to replace the bypass caps in the PTO when I got it and the coax from the PTO and a couple of tubes, then it came to life. Would really like to trade it for a KWM2/2A with power supply. Otherwise I'll be asking $425 plus shipping. If I don't here from anyone on this I'll have it at the swapmeet at the fairgrounds in Hillsboro, Oregon this weekend. This set was owned by a smoker and I've cleaned it up about as good as I can (gave it a real bath and then que-tips and alcohol treatment).

If interested give me a call or email. Would really like to deal on a KWM2/2A or maybe even S-line separates. Open to offers.

Ray,

Look through some back issues of QST and see if you can find an Ad in the classifieds from H. Keith Melton for "Spy" and "Suitcase" type radios. He is an excellent resource and very helpful. If you write, suggest an SASE for his reply. He is not a ham, but has an extensive collection of this type radio and documentation/manuals.

If I can find the address, or get a recent E-Mail address, I will pass it along.

I concur with CK that ifd you're going to have a tube radio, it might as well be the 180. Great audio on AM, good selectivity and sensitivty.
It would be nice to have a digital freq. readout...which were sold by other companies to go with the 180.
If not the 180, the Collins/EAC/Motorola R-390As will give you comparable performance with very good frequency readout ability.

Matt

Dynamotor Supply DM/64a=12volt in 275v/150m out & on the same chassis #42486 (Stromberg Carlson) 12volt in 680v/210m out. There are also capicators & relays on the chassis. Not really sure what it was originally used for, but it was in the collection of a local boat anchor person before he passed away, so I'm sure he had a use in mind.

Its somewhat heavy, but will feel light as a feather to someone who is trying to power up some WW2 gear with the real thing..$40.00 Bob

The Hammarlund HQ-180 is a nice receiver. The R-390As is also nice.
The SX-11 has great, strong audio from a pair of 6L6s !!!

T-O Keyer for sale,

One knob is a non-Halli and it has a few small holes
drilled in the lid (easy to fix with Bondo for purists!)

Works fine. Will include schematic.
$45 plus shipping
QTHR

I know I'll probably get flamed by the R 390 mafia, but a surplus BC 348 is not a bad choice for price, looks, performance and historical significance. Yes, I really DO think it is a good looking radio. That art deco dial bezel is classic. If you get the right model it is also a decent performer on the LF beacon bands. Comments?

My feelings: Use the existing 'rec.radio.amateur.swap' NewsGroup for ForSale postings (instead of rec.radio.amateur.boatanchors or rec.radio.swap). It currently has a very low noise level and I only see 10-15 posts a day - very easy to scan in just a few moments.

There is no newsgroup here called rec.radio.amateur.swap

Maybe it is only available in limited areas.

I have to go with the Collins 51S-1. It does everything I could ask
for, quietly, and reliably. My RACAL RA-17-C would be my 2nd choice,
and with it's 2 6V6s output, my 'ordinary' HQ-150 also sounds VERY
good. And-while it seems to have its detractors-my HRO-500 SOUNDS
great on SW, or anywhere else for that matter.

Better prices than you will find on eBAY (grin!)

These will go to eBAY if no one wants them at the very reasonable
prices listed here. Most are used, unless otherwise stated.

For Sale:

Lot One

QTY - Number

2 6L6GB (Sovtek, new, no box)
2 6L6GC (Fender, nearly new, no box)
3 6L6G (Two RCA, One National Union)
4 6L6G (Sylvania, one has missing locator pin)
2 6Y6G (One GM-Delco, One unmarked)
2 6V6GT (One Sylvania, One Cunningham)
1 6V6G Silvertone

Will sell these to the first person who makes a definate commitment
to take them at $60 plus $5 shipping

Lot Two

2 1626 triode
1 26Z5 rectifier (Sylvania)
1 6J5G triode (Philco)
1 84 (Philco)
2 27 (one Sylvania, one Philco)
1 42 (National Union)

Will sell these to the first person who makes a definate commitment
to take them at $15.00 plus $5.00 shipping (conus)

All tubes are tested and will be re-checked immediately before shipping.

Nice Unit.
Later Model Version says " Heath Company. A subsidiary of Daystrom
Inc.
Benton Harbor, Mich." on front Panel. With Manual Copy.

PRICE........$55.00 USA + Shipping.
##
##############
Heathkit VF-1 VFO. Overall condition on this Unit is 8+ out of 10.
Untested
on the Air.Front Panel is Exc-. A few small scuffs....Still very
Nice!. All
Original Knobs. Original Paint is VG++ with a few small scuffs and
Chips.....Very Nice overall.Original DialFace is Excellent. With
Cables and
Plugs. Another Very Nice Unit. Very Clean!
Later Model Unit...with Daystrom writing as above ......With Manual
Copy.

PRICE......$55.00 USA + Shipping
##
##########
Heathkit VF-1 VFO. Overall condition on this Unit is 8+ out of 10.
Untested
on the Air. Front Panel is VG+ with a few Scuffs and Minor Scratches.
Nice
Unit. All Original Knobs. Original Paint is EXCELLENT!!Original
Dialface is
VG+++ with one small Blemish (Scratch). With Cables and Plugs. This
Unit
has the Nicest Paint of the 3!! Very Clean.
With Manual Copy
PRICE......$55.00 USA + Shipping.
##
##########
Heathkit Model DX-40 Transmitter. Overall condition on this unit is an
8+
out of 10. Untested on the Air. Front Panel is VG++ with a few Small
Scuffs
and Scratches. Looks very Nice. All Original Knobs and Original
Heathkit
Meter. Original Paint is Excellent. No Mods that I can see. No Holes
or
Damage...real Nice Unit! With Manual Copy.

PRICE......$90.00 USA + Shipping
##
##########
Heathkit Model DX-40 Transmitter. Overall condition on this Unit is 8-
out
of 10. Not quite as nice as the above unit. Untested on the Air. Front
panel is VG+ with a few Scuffs and Small scratches. Quite Nice. All
Original Knobs and Original Heathkit Meter. Original Paint is VG+ with
some
Scratches and Chips. No Mods that I can see...no holes or
Damage....Nice
Unit.With Manual Copy.

PRICE ....$75.00 USA + Shipping.
##
##########
Heathkit Model DX-35 Transmitter. Overall condition on this unit is a
7+
out of 10. Untested on the Air.Front Panel is VG+ with just a few
scuffs
and small scratches.....Has original Black Heathkit Meter. All
Original
Knobs. Original Paint is VG with some Small chips. No Mods that I can
see...but there are 3 Holes drilled in the Back Crystal Door. No Dents
or
Damage. Nice Shape for an Older harder to find Model!

With Manual Copy.

PRICE.......$100.00 USA + Shipping.
##
##########

I have for sale a Hammarlund HQ-170A/VHF receiver in ver good condition. I would rate it an 8.5 on a scale of 10. Complete with copy of manual. Works fine. It has one replacement knob for one of the smaller knobs. It does not have the clock. Both clock blank and S-meter are clear and not yellowed. For pick up only at Greenville, SC, $150.

I would appreciate some knowledgeable opinions about what might be the "best" Boatanchor for pure short wave listening. I would limit selections to Hallicrafters, Hammarlund, and National. I am pretty sure I can't afford a collins or some other exotic radio. Thanks in advance.

In answering my own post, I just found out (thanks to Ken, NA0Y) that they are one and the same. The HA-1 was called a "TO" keyer because it was designed by W9TO.

I would suggest above anything else the Hammarlund HQ-180, if you can locate one and the seller is not looking to bolster their retirement funds.

Other options that might not set you back as far might include ones such as the Hallicrafters SX-71 or SX-100. The National HRO-50s and 60s have nice push-pull audio, but the coil sets are separate from the radio and might be hard to locate if they are not already included in the package. I think that the best suggestion here would be to look for receivers that are at least of a dual conversion design or, failing that, to at least have a good TRF front end if the IF is only single conversion. National NC-183D or NC-109 might be other choices. There also the Hammarlund SuperPro; I've never worked with one of these, but reportedly they are quite nice for broadcast listening as well.

Dave,

There are a number of excellent WEB sites on key collecting, dating, and even specifically devoted to Vibroplex. As a starter, try The Vibroplex Collector page by Randy Cole (KN6W) at:

http://www.la.ca.us.frandy/

There is a section on dating your Vibroplex and links to other sites.

With the S/N you mentioned, it is difficult to identify without other info; e.g., company address, patent numbers, more details on the key, etc. It could be a modern piece of the Portland/Mobile vintage. Or, it could be an earlier model (Lightning Bug or Champion, etc.) although that would take a little more info to determine.

Have a look at the WEB pages and see where that takes you.

Regards, Dave K7HMP

1877. INFO WANTED NATIONAL HRO50T RECEIVER

Newsgroup: rec.radio.amateur.boatanchors

Wonder if anyone can help with some info...
What is a fair price for a good conditon HRO50T receiver with coils
for coverage from 1.7 to 30.mcs ?

How good is this receiver ? or is it just a older collectors Item but
not a good receiver?
I've had a lot of receivers but never this one or the HRO 60...

so please I am interested in any and all comments.. the owner is selling
the HRO 50T for $300.00 .. thanks for all info

thanks B.A.

Message-ID: <6ithrh$7vt$1@newsource.ihug.co.nz>
Source record: 105640

Need Help on curing problem with SB-1000. Output stage is arcing badly, even on very low Ip [around 100mA]. Have tried replacing decoupling caps on either side of series choke but to no avail. Tube appears OK. Only other clue appears to be that low drive current is twice what it should be. Have heard that it may be parasitics and this can be cured by rewinding portion of series choke in opposite direction. This sounds a bit serious so would appreciate any practical advice from other SB-1000 owners. 73 de ZL1ARB at petals@ihug.co.nz

Source record: 105641

I have the following for sale:

Lafayette HA-50A, 30 to 50 MHz tunable receiver. Looks good and seems to work OK. No manual. 7.5 out of 10 on appearance. Asking $25.00 shipped to lower 48.

Heath AR-3 receiver. Knobs not original. Case has some minor wear/scruffs but not too bad. Front panel looks good with the exception of some small what looks like paint speckles on one side. This may or may not clean up...I didn't want to chance damaging the panel trying. The radio plays, but it's going to need some work. No manual. Asking $35.00 shipped to lower 48.

Please e-mail if interested. Prefer money order payment. Thanks!

John Schell N3AB

1881. Q & Z Signals: MARS Reprint available

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-08 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980508.080242.3358.4.w5jv@juno.com>
Source record: 105643

I have a fairly thorough reprint of the Q & Z signals used by the US military which includes syntactical description. I.e. this would be equivalent to what we used to read out of ACP131 back in the days of real radio. If there is enough interest, I would be willing to copy and distribute same to those who want it. Cost shipped would be around $5 to $7.
Excellent base terminology for cw and rtty.

I can also copy the HO Pub which encapsulated standard merchant traffic terminology. It is rather large and would cost at least $15 to do. Only the die-hard cw enthusiast would want such a beast, but there might be some use on RTTY as well.

Get in touch with your name, call, and mailing QTH if you're interested. If there are enough replies, we'll go with it.
I'll let everyone know in a week or so how the tally is going. We did this once before for the E&E Surplus Conversion Manuals and it worked out very well for everyone who participated.

73 to all,

Doug

Though outside of your Hallicrafters, Hammarlund, National limitations, I think that the couple of Racal's listed in the $300 range here lately, as far as price performance, would be winners. I loved my HRO 60, a boat anchor not yet mentioned, but at today's prices (especially for the coil sets) they are museum pieces.

Source record: 105648

Delurker alert (insert appropriate siren effect here)!

This is a long message, but I need some repair advice and, as you can see, I've exhausted my (half)vast knowledge.

I picked up a mid-'60s Heathkit GR-54 SW receiver at a flea-market, dirt cheap. Not the best ever invented, but I'm on a tight budget, and it meets my needs. Covers 180 KHz to 33 MHz in five bands, six tubes, half-lattice crystal filter & BFO. It's reasonably sensitive, but what it receives best is W-H-U-M (that's the station at 60 Hz).

The hum is independent of the volume control (makes me suspect the problem is in the AF stages). Get a strong signal and turn the volume up, you hardly notice it. On a weak signal, or at low volumes, it'll drive you goofy.

Prolly the filter caps, you say? I tried subbing a known good cap across each section, with no reduction in hum noted. Checked all tubes by substitution, starting with AF amp; no soap. Checked all resistors and caps in AF output stages, they're fine. Cleaned volume pot, looked for loose ground connections or shields, looked for misrouted wires, nope nope nope.

Even disconnected the dial lights, in case they were leaking -- nope. In disgust, replaced the multi-section cap just in case it was leaking between sections. Nope.

Ordered the service manual from W7FG, checked all voltages in the AF stages. Found 33mV AC on the grids of the 6HF8 where there's supposed to be 0.

Is this causing the hum (it seems a likely suspect)? If so, and all of the components in the AF stages are OK, where is the stray voltage coming from (I admit I'm a bit of a duffer at tube radio theory)?

Could the power xfrmr be suspect? How can I test it (it doesn't get warm)? Howsabout the diodes in the full-wave rectifier (they check okay on a diode checker)?

Any help or suggestions you can supply would be most appreciated. Otherwise I'm liable to realign this thing with a mallet (not really).

Thanks in advance,
73 de Jason KB3CNM

QST de W1AW
ARRL Bulletin 30 ARLB030
>From ARRL Headquarters
Newington CT May 7, 1998
To all radio amateurs

SB QST ARL ARLB030
ARLB030 LMCC petition opposed

The ARRL is organizing opposition to a new threat to the 70-cm Amateur Radio band. The Land Mobile Communications Council (LMCC) has asked the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS) on a primary basis. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis, and the 430 to 440 MHz segment is an international allocation. The 70-cm band is the second most popular of the hobby's VHF/UHF allocations, with substantial FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment.

The LMCC request, based on ''additional spectrum needs of the PMRS community,'' acknowledges Amateur Radio's use of 420 to 430 and 440 to 450 MHz, and suggests that ham radio applications can remain secondary to PMRS in those segments, but offers no explanation of how sharing could be accomplished. The LMCC says it believes the 430 to 440 MHz subband ''is more important to the amateurs for use in emerging technologies such as links with spacecraft and amateur television applications.''

The petition also suggests that equipment availability and technology resulting from an expanded PMRS presence on 70 cm would benefit hams ''pursuing such applications as compressed video television in the 430-440 MHz band.'' The LMCC concedes, however, that its ''most urgent need'' for PMRS is voice and low-speed data applications, not advanced technologies which might come later on.

The petition also notes that PMRS already uses 420 to 430 MHz in three Canadian border cities (Buffalo, Cleveland and Detroit) and a ''reduction in military use of this band is foreseen.''

The LMCC also seeks allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz as well as 85 MHz at 960 to 1215 MHz by 2010.

Comments are due on the LMCC's Petition for Rulemaking, RM-9267, by June 1. Reply comments are due by June 15.

OK! In my mind this settles the issue once and for all.
"For Sale" postings ARE ALLOWED. Auctions are sales.
Most people will use "eBay" or "FA" in their titles
to let people know. Those that don't will get the
message in time.

Thank God. I really didn't like the idea of an
ad for my National NC-155 or NC-173 buried under
the old cell phones and turnip twaddlers on
the Wrecked.Radio.Swamp. It's better when it can
also go where people actually *want* a National NC-155!
(I haven't finished restoring it yet, guys :-)
(Sure is a pretty radio!)

I have the following for sale.
Thanks
EJ (KC5EPI)

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $200

1892. Origin of the Q and Z codes

Newsgroup: rec.radio.amateur.boatanchors

---------- Forwarded message ----------
Subject: Z codes

This article was recently submitted to the Telecomms Heritage Group's journal (which I edit). Rather than just reprint the section on Z-codes and frustrate readers, I attach the full text. Hope this doesn't use up too much bandwidth!

Andy G8PTH

TELEGRAPHIC CODES ^&#65533; OF MORSE AND MEN
by Kenneth Brown G0PSW

The first line telegraph message is thought to have been sent from Washington to Baltimore in May 1844 by Samuel Finley Breeze Morse, (1791-1872). He is said to have tapped out the message, "What hath God wrought?" using a code of interrupted signals which he and his associate Alfred Louis Vail, (1807-1859), had developed some years earlier. After this momentous achievement and following the founding of Western Union in 1856, coast to coast telegraph lines were quickly installed and it then became commercially possible to send and receive telegraphic traffic by line.

Since then and with an eye on faster speeds of transmissions and higher accuracy, newspapers, railways and post offices made great use of the telegraph to provide their customers with speedy, economic, personal and commercial communication. This also paved the way for transmitting traffic by radio from the late 1890s following successful experiments by Marconi.

One way of speeding the flow of traffic was to operate an agreed set of short codes to replace well-known sentences or phrases but at that time there was no common national or international standard. The first of many conferences to discuss and try to resolve this issue was held in the US in April 1857, culminating with the release of the National Telegraphic Review and Operators' Guide. This Guide makes the first authentic reference to the well-known greeting 73; at that time meaning love and kisses. 'Later editions kept this definition but, as time went by, the meaning of 73 changed from a Valentine type of greeting to a vague sign of operators' fraternalism.

Western Union, in 1859, set up the Standard 92 Code. Replacing common sentences and phrases with selected numbers between 1 and 92 the message was telegraphed to a distant station. At the distant end the numbers were decoded and a plain language version delivered to

the recipient. The definition of 73 changed yet again to a very flowery accept my compliments. From 1859 to 1900 the many telegraphic manuals show variations of this meaning. Each major telegraph and railway company had its own distinctive telegraphic codes. Since there was no agreed standard all were different and, as a consequence, there was much confusion in communicating with different networks. During this time there were even two alphabetical morse codes ^&#65533; the American and ^&#65533;Continental^&#65533; (European) versions. Although there were basic similarities there were also some major differences. This, combined with the multiplicity of telegraphic codes, caused confusion and made communication with and between US establishments particularly difficult.

The US 1908 Dodge's Manual gives today's definition of 73 ^&#65533; best regards. Other Dodge numbers were 88 ^&#65533; love and kisses, 55 ^&#65533; lots of success and 99 ^&#65533; get lost (probably unofficial).

Also, in 1908, the British Post Office, despairing of action to agree an international code of abbreviations, issued its own list of two letter abbreviations intended for use between British coast stations and ships. The list, published in the PMG's Instructions to Wireless Telegraphists, included abbreviations RA to RZ and SA to SF. The next International Radiotelegraphic Convention, held in London in July 1912, adopted and extended the GPO abbreviations. Q was added as the first letter and so the Q code was born. The new code now ran from QRA to QRZ and QSA to QSX. On 1st July 1913 the Q code finally became an official international information code, updated as changing circumstances demanded to include new codes relating to such matters as aviation and maritime.

Some time later came the Z code, running in parallel with the Q code. This originated as a company code of Cable and Wireless with application limited, in the main, to high speeds machine morse operating at speeds of typically 120wpm. Widely used by many countries, including Germany, the Q code and Z code continued in use throughout the war. After the war high-speed morse became less widely used and was replaced by other forms of traffic communication such as RTTY and facsimile. The Z code, therefore, gradually went out of fashion and slowly disappeared. Examples of the Z code include ZAA ^&#65533; you are not observing circuit discipline, ZAN ^&#65533; we can receive absolutely nothing, ZST ^&#65533; send slips twice, ZAP ^&#65533; acknowledge please and there were lots of others.

Operating during the 1930s and early 40s, at the same time as the Z and Q codes, was the X code, then in use by European military services as a wireless telegraphy code. This consisted of the letter X followed by a number. For example X34 meant your morse is bad, X50 ^&#65533; your morse is good, X100 ^&#65533; affirmative, X112 ^&#65533; interrogative, X279 ^&#65533; what is the strength of my signal? X496/257 ^&#65533; I am winding in my aerial prior to landing/i have nothing further for you.

The X code continued in use with the forces until 1942 when, at the insistence of the US military, it was replaced by the Q code. However, the odd X code can still is heard from veteran telegraphists even now but not very often.

So the Q code became the standard international military and civil telegraphic letter code used in CW communication. (Sometimes, incorrectly, even in R/T). Published as an operators' manual, there are separate sections available to deal with various areas of communication. Some less well known examples of the Q code used by base stations of the British Army included QAU followed by QHU, meaning I am waterlogged, I am about to jettison fuel; AS5 generally followed! Even less well known is QGG ^&#65533; send the pony by the next train.

Widely used by radio amateurs operating CW, today's Q code has slightly different meanings but is still very similar to the 1912 version. One of the great benefits of using the Q code is the pleasure in being able to communicate with overseas operators who may not be fluent in the English language.

In conclusion, it is sad fact there will be no successor to the Q code; no longer is the morse code taught to budding telegraphists, except to the favoured few specialist Aldis lamp operators in the Royal Navy. Data stream transmissions have displaced morse and taken over everyday communication ^&#65533; such is the march of time.

Don't just parallel a filter cap across the old ones. Take the old ones out of the circuit when you try a new one. See, if the old one is shorted, putting a new one in parallel will not remove the short, so you still get hum.

Have you tried disconnecting the volume control output leads from the
audio amplifier input? Is the hum still present when you do this?

> Prolly the filter caps, you say? I tried subbing a known good cap
> across each section, with no reduction in hum noted.

Did you completely disconnect the old capacitor before you subbed it?

> Checked all tubes by substitution, starting with AF amp; no soap.

Did you attempt to isolate the source of the hum to a specific portion
of the circuit?

> Checked all resistors and caps in AF output stages, they're fine.
> Cleaned volume pot, looked for loose ground connections or shields,
> looked for misrouted wires, nope nope nope.

Are the filament wires for the tubes twiested around each other to
help cancel hum? Do you have the filament wires running too close
to a coupling capacitor somewhere in the circuit?

> Even disconnected the dial lights, in case they were leaking --
> nope. In disgust, replaced the multi-section cap just in case it
> was leaking between sections. Nope.

> Ordered the service manual from W7FG, checked all voltages in the AF
> stages. Found 33mV AC on the grids of the 6HF8 where there's supposed
> to be 0.

What function does the 6HF8 perform in the GR-54?

> Is this causing the hum (it seems a likely suspect)? If so, and all
> of the components in the AF stages are OK, where is the stray voltage
> coming from (I admit I'm a bit of a duffer at tube radio theory)?

You'll find out where it is coming from once you start taking a
systematic approach to isolating the point in the circuit where it
appears.

> Could the power xfrmr be suspect? How can I test it (it doesn't get
> warm)?

I doubt it. It's a passive AC device, and is not capable of adding
any additional hum to the 60Hz that's already there. The power supply
circuit should adaquately filter it out.

> Howsabout the diodes in the full-wave rectifier (they check okay
> on a diode checker)?

Have you looked at or measured the ripple level of the power supply
with an oscilloscope?

> Any help or suggestions you can supply would be most appreciated.
> Otherwise I'm liable to realign this thing with a mallet (not really).

Well, it *would* eliminate the hum problem... :^)

I'm looking for reasonably priced general coverage receiver in excellent working condition such as military models R-388, R-390(A), R-392, SX-73, SP-600 or a better quality commercial receiver.

I have an empty box CY-247/AP for TS-108/AP
Radio Frequency Load. Parts list on the lid.
The parts would be:
TS-108 Load.
UG-80/U adaptor
UG-144/AP adaptor
UG-145/AP adaptor
Gaskets, screws and a manual.

Does anyone know with what rig this was used?

Hi Jason-

Since this was not built by a production line person, there is another consideration:

I've never seen a GR-54, but if it uses point to point wiring [not a PC board], then you might look at where the wires run in the sensitive circuits [physically] and what they run close to.

For instance, there could be a line going to the grid of a low level AF stage that is running parallel [for some short distance] to a filament wire headed for a tube heater. Or maybe a grid line is close to a higher voltage secondary of the power transformer. That grid line could be picking up enough 60 cycle AC right there to cause the hum that you are hearing.

I ran into this in overhauling a Heathkit SB-610 monitor scope a while back. There was hum in the horizontal amp, showing up as jitter on the screen, and as in your receiver there was just nothing wrong with the circuit anywhere. So, I started wondering about lead routing and started pulling and pushing on wires with an insulated tool. All of a sudden, I pulled a bit on one particular wire and the jitter was severely reduced! I moved that wire a short distance away from a bundle of wires that included some power transformer secondaries, and the problem was reduced so much as to no longer be a problem.

This might not be it at all, but it's a thought.....

If you're looking at hum on that grid, then you're in the right area. The next thing to do is find out where that hum is coming from. You might try uncoupling that grid from the plate of the stage that is driving it, to see if the hum is then only on the previous plate, or is only on the grid in question, or still on both.

Just keep isolating the hum to smaller areas of the circuit until you can find the source.

At the inexpensive end, a well-restored Hallicrafters SX-99 is simple, straight forward, and a pretty decent SWL receiver. I very decent one can be picked up at a Ham Fest for under $100 (maybe even with matching speaker).

From the military side, I'd lean towards a 51J4 rather than the R-390 types. I agree with earlier posts about the "R-390 Wrist Syndrome" and that digital click, click, click dial would drive a sane SWL crazy. The sliderule of the 51J4 is a lot more convenient for band-scanning and the band switching is not quite so brutal!

Pre-Dayton-Hamvention Sale and Spring Cleaning

We often load up trucks full of equipment and go to the Dayton Hamvention. It's fun to meet
many of the people we talk to and get away from the office. There is considerable expense in
doing this and we would like to try a better way.

We have compiled a list of equipment that "would have gone to Dayton" and made it available in
a file that can be sent via E-Mail, FAX'd or even U.S. Mail. We propose to make available a:

Tektronix List Available on 5-4 SENT ON 5-4

Hewlett Packard List Available on 5-6 SENT ON 5-6

Other than Above Available on 5-8 AVAILABLE TODAY

The "Other thanHewlett Packard and Tektronix" List includes:

John Fluke Mfg., AC-DC Electronics, Advantest, Astro-Med, Anritsu, Arium, Bruel & Kjaer, BK Precision, Boonton, Dana, Data I/O, Dolch, Dranetz, EH, Eico, Elgar, EMI, ENI, ESI, GenRad, Harrison, Heath, Hickok, Honeywell, Keithley, Kepco, KH, Lambda, Leader, LeCroy, Marconi, Narda, Power Designs, Phillips, Pacific Measurements, Quantum, RCA, Scientific-Atlanta, Schaffner, Sencore, Simpson, Sorensen, Tautron, Velonex, Wandel & Goltermann, Wavetek, Weston, Yokogawa

If you would like the list E-Mailed, it is available in Excel and Test formats.

To get the list, either visit our web page http://www.valuetronics.com or E-Mail us at sales@valuetronics.com or valutron@aol.com. Tell us where to send it and we''ll attach the file
to a return E-Mail.

This is a bidding process. The bid closing dates will be listed on the files.

The equipment is available to the highest bidder(s), no accessories are supplied nor warranties
implied. We do offer an unconditional evaluation period on all the products.

I had a 51S-1 for a brief period of time- found it to be fraught with problems. Without the expensive and scarce preselector, lower frequency reception, including the AM broadcast band was terrible, being wall-to-wall birdies and mix products.There is also no opportunity to use or swap filters of different bandwidth due to the "oddball" IF frequency as one can do with the SLine and other receivers with standard IFs.

Sorry, but I have to disagree with the inclusion of the 51S-1 on a list of "great" receivers. The only thing outstanding about the unit seems to be the going market price. As much as I would have hoped otherwise from Collins, the R-390A runs rings around the 51S.

Yes! No doubt. However, when the cost of acquisition is considered,
IMO, the R-390 is a better value. If cost is not a consideration, the
the 51J is the one.

>I agree with earlier posts about the "R-390 Wrist Syndrome"
You can literally tune an cleaned, lubed and correctly adjusted '390
with your pinky on the knob. Unfortunately, most don't fall into that
category. I completely tore apart the front end gear assembly on mine,
and ran everything through an solvent bath in an ultrasonic cleaner.
What a difference- took a week of utter insanity to reassemble.

Rebuilding of the mechanicals made it a *lot* better as well.
Really, the effort's on par with the bandswitch on, say, the SX-28
now. You'd be surprised, as I was, at the relative ease of tuning and
bandswitching the receiver once the cams, rollers, detents and shafts
are properly adjusted and a modern teflon-based lubricant is applied.

I do miss the 3 foot pipe wrench I had clamped on the bandswitch knob
before. Gave operating the receiver a rather nautical feel.

No-coders owe you no explanation. Who are you anyway, and why have you
posted this on "boatanchors?"

> After all, when you begged for no-code
> access to VHF/UHF, it was with the solemn promise that we wouldn't
> have to deal with any major loss of our valuable spectrum!

Let me look through my files and see if I can find this agreement.
You'll wait, won't you?

Now the
> commercial interests want our second most popular band!

What would they want with 80 meters?

Oh, well,
> guess its time to buy some stock in communications companies
> providing PMRS service...
>
> 73 de Larry, K3LT

Larrie, its a free country, more or less. Buy whatever you want - if
you've got the money. Why not just buy a single freq, such as 3850?

yhI Jason and all:
Had a similar problem with a 75-S3 rx about a couple of years ago. Most would say: oh, try the cap (filter cap, that is). Wrong answer. Turned out to be a mildly shorted tube. When you put a drag on the supply with a soft short, check out the AC waveforms on the output of the supply. So, try that. Cal.

My SX-99 drifts badly for the first hour after that a good set for
general SWL'ing. Listened to it a lot (in my bedroom) during the late
70's to mid 80's. Now it sits on the shelf...

For Sale, Henry 2K-2 Amplifier

I have a Henry 2K-2 floor console Amp for sale. It is in very good condition. It runs a pair of 3-400Z tubes that have full output 1400+ watts output. It works on 10 through 80 meters. Has tuned inputs. It uses forced air cooling with chimneys on each tube. It will run eater 3-400Z or 3-500Z tubes. Very clean inside and out. With book.

$600.00 Or trade for a HF Rig.

Will not ship, but would meet within 200 miles of Eureka Ca.

Dear All,
Not very long ago you could find a coloued aluminium sheet that could be used for making labels by exposing it through a negative and then developing it. I am restoring an R1155 which uses several labels made using this process. With time they have faded and I want to replace them, does anybody know where I can purchase this material?.

Regards

Robin

Source record: 105580

I have two stands. Both have squeeze bar on side, one has the chrome PTT on the base. Appearance OK, but bases were sprayed flat black at some time in past. Have coiled wires w/o connectors.

Have three heads. One is marked Heil, another electret, and last says original. No rust and look good.

The working condition is unknown on any of this offer. They do look good, however, and could be made operational easily.

I am looking for a workable Vibroplex bug. Not a collector's piece, but something that looks OK and works (no missing pieces). Would trade above for key.

Otherwise, $75 plus shipping.

Source record: 105581

All the above great suggestions. But I always go the simple route. Pull all the tubes out except the Rectifier tube (if it has one) and the audio tube connected to the speaker.

If you can hear the hum now, you only have two stages to look fo it .

If it's in the power supply and you don't have a scope, you can still see the 60 cycle AC ripple using an ANALOG voltmeter (never had much luck with the digital ones). Just switch it to the highest AC scale (typically 1000 VAC) and then work you way down the ranges till the meter kicks up. If see it flickering very quickly, thats the hum. If steady, then there is no hum here which leaves the audio section.

It's pretty rare AC hum could enter the other sections. (But it could happen).

Hope that helps. Please post again if your still having problems. 98% of the time, it's those nasty power supply electrolytics that dry up when they are 30 years old.

Rare 2 meter AM rig. Uses built in vfo for rcv and uses xtyls for xmit. Comes with 2 xmit xtyls. Although it is an AM rcvr it rcvs 2 meter FM repeaters just fine (no idea why). All solid state rcvr. Tube type PA.

Very collector quality. Full output (10 watts). Original green Heathkit hand mic. Built in ac supply.

$125.00 shipped CONUS.

"1011"? Is that their 10m VFO that "slides" down to 11m for CBers?

I amtrying to resurrect a Hamarlund Super Pro BC-779. So far I have it functional, and making noise. It only seems to receive between 12 and 18 MHz. all other bands show strong signals, (the s meter moves and the receiver quiets) but there is no recovered modulation on these signals.

Anyone have an idea how to proceed, or have the alignment data available? Please e mail if you have any ideas.

Thanks... ron

No, it's the Swan 1011 that transceived on ten meters and received- only on 11 meters, which was advertised in the ham magazines in early 1971 (I think it wsa '71 and not early '70). I have no idea whether any were actually sold. It was a bit before my time, and I don't have a full set of back issues through those months that it occurred. Supposedly, the 11meter band was added as a "propagation tool" because since CB is well occupied you'd have plenty of signals to hear when the skip was in, whereas ten might be unused even with good conditions since nobody was routinely using the band.

There was fuss about the rig, because it seemed like a glorified CB set and because it seemed like it would be easy to get it to transmit on 11Meters.

So, it was taken off the market if it even got as far as being on the market.

SOme time later, the Siltronix 1011 rig was born. Siltronix was either a sister corporation of Swan, or the company that owned Swan at that point. I thought the two rigs were identical other than name. I don't know whether it came from the factory able to transmit, or if you had to pay extra for that.

Of course, as a Siltronix rig you didn't hear much about it in the ham magazines. I seem to recall a field day about 1973 or 74 where someone had a CB magazine and there was an ad for the Siltronix 1011.

Source record: 105518

Hi gang,

Heres a true boat anchhor.

I have a Teletype Model 15 unit. The machine has a problem, it won't do a full carrige return either from an on air signal or the keyboard. When a carriage return is called for it will only go back about 3 to 5 spaces and stop. From that point on it will start printing if a signal is being received or just sit there if no signal present. I can only get a full carriage return if I press the carriage retun 5 to 10 times, it will return the 3 or 5 spaces each time until the carriage is fully to the left. Other than that it works fine.

Machine has been stored 12 years with no operation. I cleaned it and lubed it before I set it up this weekend. Didn't find anything really wrong during the clean up and lube. It almost acts like a typewriter with tabs set, only this is backwards.

Any Ideas/help out here. I have no manual for this so I am shooting in the dark.

An electrometer usually refers to a VERY high impedance DC voltmeter, used for measuring low
(microvolt) potentials.

What you are refering to I believe is an undelevoped Offset-Litho
printing plate.

You can thet these at any printers suppliers. Look em up in the yellow
pages, or go straight to the Offset machine makers such as Gestetner or
Rotaprint or the many others in the field.

To stop the fading, rub the developed lables with Offset-Litho ink, wait
till it hardens (a couple of days) and then wash and preserve the image
and surrounding aluminium. Gum Arabic is used normally for the
preservation.

If you have problems then contact me.

Regret that my primary experience is with the Model 28, but wonder if the Model 15 uses a "Dash Pot" compression cylinder to dampen the carriage return and avoid the mechanism slamming into the left side of the unit. The symptom you described would sometimes occur in the M-28 if the rubber gasket in the dashpot dried out and got stiff or jammed in the cylinder. The right to left return would be too slow, hence the character stepping cogs would drop and engage before the carriage was full left. Might be something similar.

Tim:
The input antenna transformer for that band has been burned open.
Since parts will be hard to obtain, you'll have to try what I did when
I did the same thing: take the transformer out of the chassis, &
attempt to find the open by CAREFULLY unwrapping the turns. You'll have
to CAREFULLY solder the break & re-wrap. Put the transformer back, &
re-align that band, & you should be ok.

1993. FS: QRP Plus, MM-3, Old Straight Key, TS-450S

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-10 00:00:00 UTC
From: Bill <bill@halcyon.com>
Message-ID: <01bd7c66$a090e240$51203fce@bill.halcyon.com>
Source record: 105529

I am selling some of the items I am no longer using. Each item on the list below has a hot link to a picture or pictures of the item.

My terms of sale are as follows:
I will not ship outside the US.
Payment should be by cashiers check or money order.
Buyer pays shipping and insurance.

You can view my high integrity rating on eBay. My name there is "bill".

You may contact me by email at bill@halcyon.com

Here are the items!

Index Laboratories QRP Plus

160-10 meter CW/SSB transceiver. This is the latest (last) version they sold. It has never been used in the field and has been used very little in my ham shack. It has a built in keyer and audio filter.

This rig runs some of the best full break-in CW I have ever found. It has a general coverage receiver.

It will come in its original box.

This is the best QRP rig ever made. The original cost was $695.00.

There is a brochure included. The manual is also there.

http://www.halcyon.com/pub/users/bill/qrp-fnt.jpg

Sale price is $500.00

MM-3 Keyer

This is one of the famous keyers from AEA. These are now collector's items. AEA has not sold them for about 3 years now. There won't be any more of these!

The keyer has more features than any I have ever used, memory, contest mode, contest simulator, serial number, paddle reverse, and much more. I have included a picture of the label on the front of the keyer that has a list of all of the functions. The keyer comes with a manual.

The link to the function label is below:

http://www.halcyon.com/pub/users/bill/mm3-lab.jpg

The front of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-fnt.jpg

The rear of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-rear.jpg

Sale price is $150.00

Kenwood TS-450S

This is an all band HF rig. It is in good shape with just a few minor scratches on the case. There are no accessories or a manual.

If you have been looking for an inexpensive HF rig with all the bells-and-whistles this is the rig for you.

Because of its small size and handle this rig would make a perfect DX-pedition transceiver!

A picture is available at:

http://www.halcyon.com/pub/users/bill/TS-450S.jpg

The sale price is $725.00.

Old Telegraph Key

Here is what I have been told about this key:

It was used in San Francisco to signal bells by the fire department

Here is what I know about the key:

It is small 1 3/4 inches wide and 4 inches long.
It is solid brass with finger hold being wood (at least that is what the finger hold looks like)
It is SPDT. In-other-words it has a contact at the front and rear. The rear one is "made" when the key is not being depressed.
The feel is very good especially considering the size of the key.
The key has a very unusual shorting bar that is a "U" shaped piece that comes up over the rear of the key to short it out.

This is a real collectors piece. I have never seen another one like it.

A side view of the key is at:

http://www.halcyon.com/pub/users/bill/brass-key.jpg

A top view of the key is at:

http://www.halcyon.com/pub/users/bill/brass-key2.jpg

The sale price is $150.00

I have for sale another batch of 6146's. These are used tubes that test way over spec. on my TV-7 tube tester. I've sold about a dozen batches like this and haven't had a complaint yet.

Batch #1. 4- 6146's (1-"A", Raytheon, 1-"B" RCA, and 2 regulars (RCA)). Price $22., including postage.

Batch #2 5- RCA 6293's. These are the heavy duty version 6146's, used for pluse service. They test same as above. I am using them in a B&W-5100 and a Valiant. Price $22., including postage.

Source record: 105536

Just picked up a Viking II and the 122 VFO. No manuals. They're both "all there" but not very clean (sat in basement for a L O N G time). Cosmetically, they're a 6 to 7; no nicks/dents, some small chips of paint off of the case. All original knobs.

This is real tempting for me to undertake as a restoration, but I'm a Heath guy. I would imagine that there's enough parts around to get this thing cookin' again; who knows, it might be fine upon initial power-up, but I wouldn't bet on it! (It has that appearance of being a prime candidate for a "capacitor attack".)

Needless to say, this thing weighs a ton. Decisions! Decisions! Help me out by leading/advising me in "what's the right thing to do".

Source record: 105605

Having bought some stuff at a flea market recently, and I am not sure
of what it is.
On the front it read: "D-C Amplifier and Electrometer" type no 1230A,
General Radio Co.
It got an meter with a volt and ohm scale.
Clearly it amplify DC current, but for what?
It got a ground switch with I R and E. An switch marked ohms
multiplier, and one for volt.
I am no electrical wizard, but not completely blank either. Will
someone take the time to explain to me? I would be very
appreciative.
And by the way, it would be a tiny boat for this anchor, it is quite
light, but so is Drake 2B.

There were, I believe, also other "TO KEYERS" sold commercially and homebrewed.
I think the circuit was a sort of standard design that maybe appeared in some
magazines like CQ and QST in the 1950s.

The only hard-to-find part is the relay.

I found it a bit hard to get used to not having iambic keying, but they work
GREAT for BA rigs that require cathode keying (such as my Valiant)

All,

The Siltronix 1011C's and D's Come factory ready to transmit from 28.5
to 29
Mhz. Entrepid owners could look over the schematic and determine WHERE
to place a jumper to enable the rig to XMIT from 26.9 to 27.5 Mhz.

If you find one on 11mtrs with XMIT it has been modified. It puts out a
30W
AM signal, 150W SSB.

What you are describing sounds like a product made by 3M called
Scotchcal. I do not know if it is still being manufactured but you
might contact them and inquire whether they still make it and if they
have a local distributer. As I recall it came in various colors and
materials including the aluminum you mentioned and plastic film.

Hope this is some help,
Bob

2027. FS Hallicrafters HT-33A amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <1998051115042800.LAA07205@ladder03.news.aol.com>
Source record: 105415

For sale a very good condition Hallicrafters HT-33A linear amplifier, complete with original manual. A solid, heavy, 1KW++ amp, easily driven to full output by 50W PEP SSB, 12.5W AM, or 60W CW. I bought it to use with my HT-32A, but the house wiring won't support it and the other BA gear in the shack. Price: $450., for pick up at Greenville, SC, or I can deliver to Dayton.

Jon

2028. Re: KW-1-- Did It Sell?

> 73 DE Dave Stinson AB5S
> arc5@ix.netcom.com

Dunno, Dave - maybe he's approaching it from the wrong angle. Perhaps if he listed it as 'FS - KW-1', then had a message that said '....see this classic on ebay, for sale only if you're willing to pay more than anyone else, including my reserve bid...'

Think that might do the trick? Naah, Eric is far to decent to be that deceptive.

I wouldn't sell mine for twice that. ;)

Besides, did you know there are only 2 kinds of boatanchor enthusiasts? Those who have KW-1's (or appreciate them even if they don't), and those who constantly whine because they don't have one, and are perhaps a wee bit jealous of those who do.

73 de Todd, KA1KAQ 'The Voice of Vermont' (KW-1 equipped) ;)

2029. Need info on Superior tube tester

2033. Wanted to swap for HF rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: Dwight W9YQ <dgbcms@netnet.net>
Message-ID: <35572225.5639536C@netnet.net>
Source record: 105421

I've just acquired a several pieces of ham equipment from an estate.

I'm interested in making a simple swap for a HF transceiver and/or HF amplifier
in good condition. No money nor dollars need be involved, I'm willing to meet
1/2-way, within a day or so of travel from Northeastern Wisconsin (near Green
Bay), depending on the offer.

Make me an offer! What have you got? Will take the first reasonable offer
received for the lot, cash or rig!

Swan HF-700S SS-16B 3.5-28Mhz, 1979 vintage, tube type transceiver with
PSU-3A power supply and manual, cosmetically mint, receives great, output
is low on transmit.

Heathkit HR-10B receiver with manual, cosmetically mint, seems to work

Heathkit SB-300 receiver, has the (3) filters, cosmetically mint, seems work,
with manual, no power cord

Heathkit SB-400 transmitter, with manual, cosmetically mint, lights up, haven't
tested transmit as it don't have the cables needed for inter-connection to the
SB-300 for tranceiving, also no power cord

Heathkit HD-1416 Code Practice Oscillator, no manual, works

Ramsey E-Z Key CMOS CW Keyer Model no. CW-7 with manual and matching
case, works

Ramsey FHT-1 Fox-Hunt, 2 Meter, 5W Transmitter, no case, 80% assembled,
no manual

Ramsey AA-7 All Band HF, VHF, UHF Active Antenna, assembled, manual, no
case

Ramsey 40 meter QRP, HR-40, all mode receiver, assembled, manual, matching
Case and Knob Set, works

Ramsey 40 meter, QRP-40, 1 watt, CW Transmitter, assembled, with manual
and Matching Case and Knob Set

Swan SWR-1A SWR/Watt meter 100W,3.5 to 150 Mhz at 1000 watts

Radio Shack Digital SWR/Power Meter, rated at 2000 watts, Cat. 21-257

Radio Shack SWR/Power Meter, rated at 2000 watts, Cat. 21-524

Zoom 28K Internal Fax Modem and a 14.4 Fax/Voice Internal Modem

June 1992 Sam Amateur Data base on 3-1/2 disks

Several QRZ CD-ROM's, Jan 1996 vol. 6, QRZ CD-ROM Dec 1996 vol. 8,
QRZ CD-ROM Apr 1997, vol. 9 call sign database

Hustler Mobile Ant System includes MO-1 fold over mast, standard
resonators for 80, 40, 15, and 10 meters, SSM-3 Stainless Spring,
VP-1 Tri-band Adapter, working condition

Carolina Bug Katcher 10 through 40 meters with IM-1 Inducti-Match
with docs, working condition

Butternut HF6V vertical 80, 40, 30, 20, 15, 10m with docs, in working
condition

Pro-Am HF Mobile antenna for 40 meters PHF-40 (similar to a Hamstick)

Either e-mail me or call at 906-826-7422.

2045. Valiant tech question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <35576C74.83FE460@erols.com>
Source record: 105433

I've got a Valiant that I recently got back on the air after considerable re-build, both mech and electrical. It now works OK and puts out a clean signal with good, symmetrical modulation. Problem is, when tuned to about 125 watts out, the grid drive indicates only about 1 ma of drive. If I attempt to adjust it upwards, the CW waveform goes to H#@@. I have to keep a scope in the line to ensure a clean signal. Now, I realize that 3 6146's cannot put out 125 watts of RF with only 1 ma. of grid drive. I am assuming that I have a metering problem. Yes, the rig appears to be neutralized as the waveform (and other indicators) are normal. There appear to be no spurs on the spec a., either. Has anyone been down this route?? Thanks.. Jeep K3HVG

From: kk5fe@communique.net
Message-ID: <6j7qln$al5$1@kiyoko.communique.net>
Source record: 105435

Hi,

Last night my Ranger lost audio. I can hear something very light if I
monitor my signal on the receiver and only if I put the audio gain all the
way up. It puts out full output as a carrier, but no audio.
I have checked the tubes in the audio section, and even substituted a
couple just to make sure, but all check out good.
I also changed mic's to eliminate that.

Any thoughts on what to check first would be very welcome.

Please respond via email

Thanks for reading,
Keith KK5FE

2049. Dynamotor Supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: napoli@i-2000.com
Message-ID: <355b72fe.23177482@news.i-2000.com>
Source record: 105437

Dynamotor Supply DM/64a=12volt in 275v/150m out & on the same chassis #42486 (Stromberg Carlson) 12volt in 680v/210m out. There are also capicators & relays on the chassis. Not really sure what it was originally used for, but it was in the collection of a local boat anchor person before he passed away, so I'm sure he had a use in mind.

Its somewhat heavy, but will feel light as a feather to someone who is trying to power up some WW2 gear with the real thing..$40.00 Bob

You forgot a third category: those of us who are SWLs and only use boatanchor receivers, and don't give a rat's rump about transmitting equipment. :^)

C.K. (constantly whining instead about not owning an SX-88...)

2051. Still Looking for Morrow CM-1 Manual

Newsgroup: rec.radio.amateur.boatanchors

From: donrm@sr.hp.com
Message-ID: <6j7ttk$agv@canyon.sr.hp.com>
Source record: 105439

I'm still looking to buy/copy a schematic/manual for the Morrow CM-1 monitor.

Anyone out there have one? I've already tried Sam's Photofacts without success.

I'm attempting to find the number for the tube that drives the relay and also the manufacturer's part number for the relay itself.

2052. More info on the Alexanderson Alternator, and a schedule update

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6j7b55$mh4@news.Hawaii.Edu>
Source record: 105440

Here's more interesting facts from Jan. Also, there is a transmission schedule update at the very bottom of this article. // Jeff KH2PZ

Jan wrote:

All 200 kW it can give but much of it will be consumed by the antenna losses. The call sign is SAQ and the mode is A1 (CW).
The antenna is the original newly refurbished 1924 vintage system, a vertical with a giant radial system in the ground. Radiation resistance 2 ohms. There are six towers, all 127 meters tall spaced 380 meters. The tower carries the feeder to the six vertical radiators. In it's heyday, regular transmissions were done over the pool to the US east coast.

Once upon the time there was a receiving antenna located close to Gothenburg but unfortunately it's gone. It was sort of a Beverage, very long. I think the receiver station building is preserved, thoo.
There is a picture of the transmitting antenna on the web pages.

> I am wondering if, by modifying my regennie to hear that far down, if I
> could even hear that station over here? I used to listen to a lot of the
> VLF stations from all over the world, but they were usually running a lot
> of power and really big antennas, and I was using RAKs, an RBL, an R-389,
> and the VLF version of the SRR-11 at the time.

The standard approach over here is a wire, a diode, an audio oscillator and a hifi using the turntable input and keeping the dog outside :-)
A little more is called for over there. On the east coast, a resonant loop antenna or even a ferrite rod perhaps coupled to existing ham antennas will do. You will need some luck in the 7 land. Propagation is ground wave so there will be a lot of losses over Canada. I would go backpacking far away from urban noise with a regenerator and a frame antenna in your place, maybe with a roll of wire to string up the trees, beverage style.

Boy. I would like to key this beast once, just once...

Jan, SM5GNN

Subject: Alexanderson Alternator Transmission Schedule update

The following seems to be a refinement in the broadcast times:

Yes, we will start the old 200 kW Alexanderson alternator May 28 at 0915 to 0945 UTC and 1500 to 1530 UTC and send the same short message a few times in Morse code, A1A on 17.2 kHz.

Good luck!

Telia Mobile, Grimeton

>I also changed mic's to eliminate that.
>
>Any thoughts on what to check first

Check the interstage transformer in the audio section. A section of mine opened up a few years ago, and produced the same symptoms. The transformer in question is on the underside of the chassis.

Source record: 105447

Bob,

I have one, never used, with power supply; SBE36 original carton purchased Autumn 1972 after the Agnes flood. CB was big. and after things calmed down I was going to put the SBE36 on the air for myself. A now EX employee accidently broke the make bakelite key on the male power supply plug, and then he plugged it in but was wrong on the prong match. A puff of smoke and I never put it on the air, I don't know what is wrong with it. Yes, Nixie tubes, I think Collins filter I'm not sure. I would not doubt if the operating manual is around somewhere, but I haven't come accross it lately. I have no idea what to sell this for.

2060. SP600 bandspread dial

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: msix@rt66.com
Message-ID: <6j80rc$8r7$1@news.rt66.com>
Source record: 105448

An attractive, professionally made reproduction of my old
1968 SP-600 ham band only bandspread dial is now available.

It fits on the front of the logging dial inside the logging
scale and covers 160-10M plus WARC bands.

I have used this with four SP-600s and had no trouble aligning
them to the dial.

Contact Mike Tobin, the old-radio-dial maker, at dials@juno.com
to order. I think the price is $12.

His page is at http://members.aol.com/rockseaent

I sent Mike installation and alignment instructions which he
includes with the dial.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 17th, 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

don't have a cable, but you may not need one. I modified on of the
"commercial" versions of the ft23, slightly different number, the fth-2006,
to be programmed from the keyboard, making it a freely progammable ft23 with
complete 140-200 mhz tx-coverage! yaesu has the missing keys of the ft-23
keypad hidden under a peace of plastic.
Just soldering one jumper #9, and some mechanical stuff to reveal the hidden
keypad keys did the trick!
If you want more information, let me know.

2074. Marine VHF radio conversions ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <355645b3.4159883@news.mnsinc.com>
Source record: 105541
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.homebrew

I recently acquired a Standard Horizon Explorer II marine VHF FM
xcvr that I am going to try to modify for 2m on the local repeater.

NOW I find that those rubber covers on
the front-panel are ACTUALLY push buttons for membrane switches and
this baby looks like it is actually synthesized on several channels,
hmmmm. Uses about 5 crystals total in there. Anyone have any
experience moving these jewels or other similar radios onto the 2m
band?

The rocks are marked:

11.155
12.600
"10M15AS"
47.5166
49.1353
(These last two are in their own shielded compartment with trimmers,
varactors, a transistor and a coil/can)

Any idea what frequencies it covers NOW as-is?
Was it somehow programmable?
Anyone have any clues how to move this thing down?

If you don't know, do you have any friends who work with these kinds of things
that MIGHT know?

I do have a manual on the way, so that might help!

Regards

Bry, AF4K / G3XLQ

2075. Output transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <35564a4d.5337373@news.mnsinc.com>
Source record: 105542
Cross-posted to: rec.audio.tubes,rec.radio,amateur.homebrew,rec.radio.amateur.boatanchors

Anyone have any experience rewinding output transformers that can give me some idea of what to expect? I have a 100 watt output tranny that will do 70 V (and higher) line outputs from a pair of 807s.

The amplifier is complete and I have put new 6SN7s and 807s etc. in it.

Tranny looks nice: drop-through, shrouded with nice bells.

Is it POSSIBLE to rewind something like that?

For the present 70 volt line, at 100 watts I figured the Zout is about 49 ohms or so, and so I would need to count the turns on the secondary and then divide by what? I think I would use the square root of 49/8 to get 8 ohms out... but my memory is short and the text book is buried somewhere.

OK here it is...

Lets see, N2/N1 = SQRT(Z2/Z1)
So if N2 is the primary and N1 is the secondary, I want Z1 to go from 49 to 8 ohms so what must I do to the number of turns N1? Decrease them by approximately the square root of 6. A ratio of about 1/2.45 times the original turns count.

Do you agree?

That comes out as about 0.408 times the original number of secondary turns

What fun. Now IF I can JUST get this darn thing APART!

Any recommendations on removing laminations?
Chemical solvents OK? What should I expect to encounter?

So I wind off the 70 V line secondary and count the turns as I go.
That gives me the original N1 and then I use thicker wire, but wind a new secondary with less turns by a factor of 0.408 times the original.

Can anyone advise?

2076. FS Heathkit SB-401 TX

2080. WTB: Manual, power supply for Hammarlund SuperPro

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-11 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980511.091242.3358.12.w5jv@juno.com>
Source record: 105547

Good evening to everyone on the lists,

I picked up my first Hammarlund SuperPro this weekend. The front panel simply says SuperPro; no model number or military number or other designations. Under the hood are the black metal tubes with tube diagrams on phenolic covering the coil compartments. VT numbers so must be WW2? The dial windows are small black, inset, something like the early HQ series. Receiver has a 5 position crystal filter and also a "send-receive" switch on the panel that looks original. The band change knob is in the center below the round meter and reminds me of the dial window on the R220 HF/VHF radios.

If anyone has a manual for sale or other information, get in touch. I also need to find, buy or build a power-supply for this beast. If you have a spare supply and would consider selling it off, get in touch as well.

73,

Doug

The mod you are contemplating is very nearly impossible, from a practical standpoint. You will very likely be gutting the radio and pretty much be building from scratch.

If you are not familiar with Marine VHF, Some channels are simplex and some are duplex with an offset of 4.6 MHz, and channel spacing is 25 KHz with some gaps, and the channels are not all consecutively numbered. If it were only a matter of changing a pll reference crystal, it would be feasible. VHF marine channels are from 156.025 to 162.025 MHz, close enough to 2 meters.

Older radios would be easier to modify, but I am thinking that you have a more modern radio that has a program in ROM for the frequency synthesis. You can probably use the driver stages, PA, audio chain, mixers, etc, but you will probably have to build a whole new LO setup, and it will be tough to fit it into the case. You are looking at some really MAJOR design work. If you manage, by whatever method, to end up with a practical 2 meter radio, you will have earned bragging rights.

If you decide to go through with it, best of luck. You will find VHF channel info in 47 CFR part 80.871. Good luck.

<snip>
There are commercially available chemical strippers that may will soften the varnish insulation with which most transformers are wound. However, if your transformers are "potted" which means they are sealed in a "water tight" compound, the only way I have been able to remove this compound is by burning the transformer. Someone else in the group may have knowledge of removing potting compound with chemicals but I do not know of any.
So, the way I would go about it is this:
1) Unbolt the end bells. If they are bradded or pop riveted on, you will have to grind off or drill out the pop rivets. The endbells may be stuck to the lamination and require prying. I use a flat blade screwdriver and a large locking handle knife. I actually hammer the knife edge in between the end bells and the laminations creating a split. Then insert the screw driver and twist. Work your way all the way around the end bell.
2) Burn to remove the potting compound. An outdoor "cajun cooker" works good for this. Slowly heat the tranformer over open flame. Keep drafts away as they will cool the transformer. You may even set a coffee can on top to keep out the drafts.
If a "cajun cooker" is not available you can actually burn the transformer on an open wood fire. I have built an outdoor "campfire" type fire and set the transformers right on top of the burning wood. (This is how motor shops burnt motors and transformers years ago.) When the tranformer begins smoking, burning has begun. When the transfomer quits smoking, remove it from the fire and set it aside to cool. Do not let the transformer remain on the fire after ti has quit smoking!!! Burning on either a wood fire or "cajun cooker" should take about 15 to 20 minutes. Be warned, the lead wires will have all the insulation burnt off so colors will disappear.
3) After the transformer is completly cool you should be able to tap the laminations abd see ashes fall from the windings. Blow, dust, or vacuum the ashes as best you can being very carefull not to disturb the windings. Draw a sketch of the tranformer making note of the position of the lead wires and where each wire enters and exits from the transformer. You should be able to see where the lead wires are twisted and welded to the transformer winding lead wires. Carefully clean burnt varnish from coil leads and use a caliper or michrometer to measure the diameter of the bare wire. Make notes

of these diameters on your sketch....

** I can take you completly though the process if I haven't scared you away yet. Let me know and I will continue. If this is too much detail for the group, I will email it to you privately.
You can rewind your tranformer if you really want but it will involve fabricating a coil jig and much tedious work. Also, your coil probably will not fit in your laminations on the first and maybe second try. I do it all the time but then again I have been doing it for 30 years and what seems simple to me may be difficult for others...
Let me know if you want me to continue... Jim Shumberg

Folks,

In February, I sent my TMC GPR-90's power transformer off to Joe Russo at ACR Electronics (17 Joice St., Lynn MA 01902 781.598.5908) to have the B+ winding repaired. Joe spoke to us on the phone and assured us that there would be no problems, and that the transformer would be as-new when he returned it.

Joe returned the transformer within the time promised. It was completely rewound (every winding), and all of the wires were covered with original-color spaghetti (looks like no soldering done inside). The voltages are spot on, and there is no obvious extra heat being produced (may actually be a tad cooler).

I highly recommend Joe's work, and he will have all of my transformer business in the future.

This is great stuff - thank you....

Recently, "Jim S. (In Houston)" <jim@drivesys.com> wrote:

>Let me know if you want me to continue... Jim Shumberg

Yes please do!

I wonder though - is burning ALWAYS necessary?

This is not a potted transformer, but has the usual black varnish finish on the laminations only. If I burn it, won't it destroy the fish paper and some of the other insulation materials?

Also, can't I HAND-WIND the new secondary?

2094. DAYTON-GOERS- WTB

Newsgroup: rec.radio.amateur.boatanchors

I've always wanted to go to Dayton.
Maybe when the kids are grown :-)

I will pay top prices (but not blood :-) for unusual
and uncommon "ARC-5" type command sets.

AN/ARC-5 T-15 Transmitter.
It is black wrinkle, tunes 500-800 KC and has a bananna-pin
connector on the bottom left of the front panel.
Beware of T-15 tops on common rigs!
I got caught that way once.
I will pay up to $400 for this radio in good condition.

AN/ARC-5 T-16 Transmitter.
It is black wrinkle, tunes 800-1300 KC and has a bananna-pin
connector on the bottom left of the front panel.
Beware of T-16 tops on common rigs!
I have one but it has the wrong top on it.
I will pay $50 for a good-conditon T-16 top.
I will pay up to $250 for this radio in good condition.

Seeking anything in any condition that is marked for
radio system RAT or RAV.

I seek "ARC-5" type command sets that tune above 9 MCs
(except T-23/R-28), have model numbers factory-
modified to end in "X", are marked in Cyrillic,
or are otherwise uncommon factory or depot modifications
or small production runs.

Also seeking grey Aircraft Radio Corporation "C-xx" series
control boxes with tuning dials or transmitter controls on them.

I can be reached at (512)989-1599

2101. WTB: SX-101a coil 050-200735

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-12 00:00:00 UTC
From: mark@flyjetwest.com
Message-ID: <3557d4ba.89599709@news.concentric.net>
Source record: 105466

Hallicrafters SX-101a: coil 050-200735, one of three identical cans on
a sub-chassis. Tallest one damaged, coil intact but un-adjustable.
Does anyone rebuild these or is anyone scrapping one?
Thanks in advance,
Mark in North Hollywood, CA, USA

Hi Chris, I'm looking for a band switched inductor for an amp project.
Does the thunderbolt have such an item, and if so, what do you think you
would have to have for the inductor? thanks, John N0EE

2103. For trade: Hallicrafters HT-32A transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-12 00:00:00 UTC
From: mark@flyjetwest.com
Message-ID: <3557d62b.89969382@news.concentric.net>
Source record: 105468

Beautiful HT-32A, appears to be working, RF lights a lamp.
Unit has the usual minor scrapes on it's flip-top hood. Otherwise it's clean and complete. I can't tell how well it works, and I collect receivers not transmitters.

Would like large general coverage receiver, in fair to good condition.

Would deliver/pickup within 200 miles of Los Angeles area. I also need a really good variac, a small trailer (to pull with Toyota), and a 15W or so solar panel.
Thanks,
Mark in North Hollywood, CA, USA

2104. Re: Model 15 rtty help

Newsgroup: rec.radio.amateur.boatanchors

Source record: 105469

I used to work on & rebuilt several 15's and 19's. I don't think the dashpot will be the culprit, as it doesn't engage until the carriage is almost completely returned. I'd first suspect gummed up carriage track & rollers, and I'd take a close look at the return spring assembly. Does the carriage seem slow or sluggish? When it stops, is it an abrupt stop (like hitting something) or is it slower (like something gummed up or a weak spring)? It may be the release for the return is loose or worn and falls back into place before allowing the return to be completed (I need to refresh my memory on how it worked).

I have a copy of the old NAVSHIPS maintenance and rebuild instructions here, and could look up more possible problem suspects and maybe send some copies of relevant parts if needed.

I have an Alpha 87A in excellant condition from a silent key.
Hasn't seen much use lately as he's been sick for a while. Virtually like new!

Beautiful condition and longing for a new home.
New these amps run $6390 + shipping.

Same as what you get if you called the factory to order one (except no wait for delivery!)

Grab this one at $4675 + packing/shipping.

Also have a near mint Icom IC-765 with CW filter from the same SK $1350 + ship

See all the neat stuff on my site

From: n3ab@fast.net
Message-ID: <355a1e2c.307684@news.fast.net>
Source record: 105471

I have the following for sale:

Lafayette HA-50A, 30 to 50 MHz tunable receiver. Looks good and seems to work OK. No manual. 7.5 out of 10 on appearance. Asking $25.00 shipped to lower 48.

Heath AR-3 receiver. Knobs not original. Case has some minor wear/scruffs but not too bad. Front panel looks good with the exception of some small what looks like paint speckles on one side. This may or may not clean up...I didn't want to chance damaging the panel trying. The radio plays, but it's going to need some work. No manual. Asking $35.00 shipped to lower 48.

Please e-mail if interested. Prefer money order payment. Thanks!

OK surplus experts,.......what was the model number of a WW II vintage Navy transmitter that used a pair of 803 tubes? It was a TD??? something I think, but not sure. Does anyone out there in boatanchor land have a clue? The 803 was a predecessor to the 813. The 803 was a late 1930's design. The transmitter as I recall was for CW and RTTY only, 2 to 18 Mhz.

I have the following items for sale. Prefer pick-up but will ship (you prepay) if you arrange shipper to pick-up from 72181. All could be shipped UPS. Prices quoted OBO. I will consider packing myself double boxed, etc., depending on the item and trade.

RME-45 receiver w/matching speaker and orig case $80
Someone has replaced a few of the locktal sockets with miniature ones. Does not work but otherwise appears complete. Cabinet and front panel could use re-finishing but no dents, etc.
Speaker good. No manual

Hallicrafters SX101-A w/orig case $110
Works good. Needs re-alignment on 10meters, I think. 80 and 40 sounded very good. Appears someone has substituted a new 12.6 vac filament xfmr but did not drill new holes for it, etc. Cabinet has been repainted but not as good as it should have been. Front panel okay, all lettering is good, some faint cracking in the paint. All orig knobs w/skirts except for the Notch Freq.
Copy of SX101 manual only.

Military Radio Rcvr R-174/URR. In case w/ power supply $100
This unit apparently runs on 110vac, 24vdc, 12vdc, or 6vdc. Complete inside and out. Good cosmetic condition. Made by Motorola. Late 50's vintage.
Heavy! No manual

Hallicrafters R-42 Reproducer speaker. $50
Case somewhat dull with some scratches, would repaint nicely. Speaker sounds great! The switch on the upper left is missing for Hi Fi or communications.

1 used 810 triode cond. unknown, fils good. $25

2 used 803 pentodes cond. unk. fils good. $20 for the pair.

Tripp Lite model BC-1200 UPS, no battery, otherwise looks fine inside and out. $100

Heathkit voltage calibrator VC-1 $20 no manual

Heathkit Signal Tracer T-4 w/probe $20 no manual

Heathkit RF sig generator 1G-102 $20 no manual

I haven't felt like digging through the magazines, but he's some info.

There's an ad for it in the first issue of Ham Radio that I ever bought,
February 1972, on page 37. It's labelled an SB-35, not an SBE-36, "SBE"
is a couple of place on the page, but the company name is listed as
Linear Systems, Inc which also sold some slow scan equipment (including
the monitor that had the cassette recorder sort of built in).

I thought the company that produced the SBE-33 and SBE-34 was Sideband
Engineers, though somehow I have a memory of Raytheon fitting in
somewhere. I can't think of where to look for ads for the earlier models
at this point.

I recall that the rig had a very brief lifetime. Linear Systems went on
to sell a 6M SSB rig that looked like a converted CB set, and I think a
2meter rig, but you didn't see ads for the SB-36 for very long. The
impression I got was that it never sold many.

The story gets a little trickier. I recall an ad for the rig where there
was an 11meter band position. The Ham Radio ad shows the bandswitch but
no such position, though it does show some auxiliary positions on the
bandswitch.

But as far as I can tell, the rig morphed into something else.

The 1972 edition (it carries a 1971 copyright) of Popular
Electronics' Communications Handbook (a collection of articles about
differnt areas of radio, including lists of commercial equipment) shows no
SBE or Linear Systems equipment, but a "Robyn Digital 500 SSB Transceiver"
which looks a lot like the SB-36 in the picture and description. THough
it's hard to be sure, since it's a tiny picture and the Linear Systems ad
showed segments of the front panel but not the whole thing. In the CB
section, there is equipment from Robyn and SBE.

I'm sure I saw an ad for the Robyn rig somewhere, and that must have been
where I saw the 11Meter position on the bandswitch. Wish I could remember
where I saw that ad.

So I guess the SB-36 didn't morph, but the rig was made somewhere else and sold by two distributors under different names.

It would be interesting to hear more about the rig. At the time, the only other ham rig with digital readout that I can think of was the Signal/One CX7A.

But other than the digital readout, and I'm sure it was only a frequency counter and not a synthesier, and two filters for sideband (one for upper and the other for lower, and there might have been a rig or two that did it this way) it isn't a particularly special rig for the time. While the ad shows some of the features, it says nothing about specs. It doesn't even mention the price, though the blurb for the Robyn rig mentions $895.

I will certainly look into these models; thanks very much for the suggestions. I saw a couple of '28s at Dayton last year -- the clean ones with the matching speaker, while not as much as an SX-88, still seem to fetch a good price. I have yet to run across an AR88 in my travels. Thanks again for the tip.

C.K. (hey, that's this Friday...)

Anyone can help me locate Schematic for Emerson model 467. Do not know if this is the correct model of this radio but looks exactly like Emerson 467 except horizontal grill bars instead of verticle. I seen picture of 467 in a book called "Machine age to Jet Age" By Mark V. Stein . If anyone can identify my radio as it uses 5 tubes but chassis has an extra hole for a sixth tube socket. All wood cabinet just like picture except for those grill bars which go horizontal instead of verticle. I need schematic desparately. Please email with any help.

Thanks in advance,
Bob Sayers

2148. Large tubes. Help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-13 00:00:00 UTC
From: VeeBee@my-dejanews.com
Message-ID: <6jb8lo$em3$1@nnrp1.dejanews.com>
Source record: 105366

(My first ever news-posting, so I'm only learning here).

I can't identify a few large vac tubes.

1:- Labeled 'RCA Developmental Type Vacuum Tube' No. A.2669A
This weighs about 18-kgs!, stainless-steel or plated-brass
encased, large connector on the bottom, and four large connectors
at the top. The main body also has stainless-steel gas-fittings
with short steel piping, to apparently link the top of the main
body to the bottom of the main body, from both sides. (Cooling?).

2:- No brand-name, but was told the ones below are microwave valves.
About the size and shape of the old German grenades, but with an extra
glass bit at the opposite end of the 'handle'. One has CV1500 on it,
and the other has CV1499, and serial-number-1 ! (First one, & brand new).
These, and others, will be posted on my web-site in a few weeks, which is
presently on V.B. Prog., but will now be on antique valve eqip. etc.

Thanks....
Glenn Sprigg

I've not only seen them - I've used them aboard ship.
They were originally mounted within a radio room console.
Unless you or someone else is refitting a radio room on an old
museum ship or needs it for some other museum use, I'd think
that they have little value. If it's original, it's crystal
controlled with, I believe, 2MHz xtals. Thereafter, the circuitry
consists of multiplier stages to obtain the final freq. Not a stable
setup. A few were upgraded in the 1960's with a solid state
synthesized exciter but they were later condemned by the
FCC for not meeting current stability/spurious emission and bandwidth
regulations. I suffered thru working with one of these rigs in a
complete 1944 vintage RMCA type 4U console in 1979.
The ship was a 1944 built liquified sulphur tanker - but that's
another story.....

I always preferred Mackay Marine equipment over R.C.A (R.M.C.A.).
In any event, RMCA was sold by RCA to EAC who sold out to Mackay.
You MIGHT be able to obtain a manual from: Mackay Communications, Inc.
Raleigh, N.C.

73,
Doug

Source record: 105373

The specific model is available upon request, but I have a
terrific sounding Magnavox AM/FM/Phono unit available
for pickup only. Best offer takes it. Phono needs a bit of work,
probably just a cleanup and lube, as it plays, but not to the correct
speed. Speed setting are for 16, 33 1/3, 45 and 78 rpm. AM dial
emergency frequency settings. Unit is finished nicely in Walnut (veneer??)
with no major scratches. Tuner and Amp sound excellent. Speakers
sound like they have no damage, with a good bass response.
There are output jacks for an external
tape recorder on the rear. Size is approximately 48" long, by 24" deep,
by 36" high. Weight unknown.

The unit is located in Ventnor, NJ. This is right next to Atlantic City.

About 1 hour from Philadelphia, 3 hours from New York.

Email or Call evenings at 732-389-9407.

rswitzer@att.com writes:

>The unit is located in Ventnor, NJ. This is right next to Atlantic City.

"Pick up only" which explains the worldwide distribution of this posting.

Hrmmm, I'm familiar with AM and FM, but Phono? That's a new one. Oh wait, That's the one way music broadcasting they do on some of the FM repeaters and up in the upper portions of 80 and 20 meters isn't it?

But tell me, does this console have tubes in it? How much RF does it put out? And can I modify it for either CW or 11 meter operation?

Oh, for the humor impaired, I'm just having a bit of fun with this. It's an easy mistake to make if you *really* aren't familiar with the radio amateur connotation of "Boat Anchor". One of those Magnavox consoles certainly qualifies under the normal public image of one.

Jeff

Hello,

I have a Hallicrafters SX-42 with manual copy for sale. It has filament voltage and lights up but has no audio and does not receive. The cabinet has been repainted (ugly) but is not dented or drilled. The knobs are all original and clean and the face plate is in very nice condition, original with no scrapes or gauges. All the lettering is just as new. I believe this radio could be restored by someone with the time. Best reasonable offer or trade for another Hallicrafters general coverage receiver (what do you have?).

73,

Peter Pavlovich N8EVJ

Source record: 105397

Grand old (1947-1950) radio needs new home. This receiver is much too nice to leave sitting around. I don't have the time for it. It needs an electrical tune up to restore its performance. Radio is complete with all the original knobs and a full set of tubes. It powers up and receives on 1.6 - 5 MC band, but the audio output is low. The rest of the bands have no reception. It has a very clean, rust free chassis and cabinet. The dials and meter are perfect. The set is a "7" in appearance. Op/service manual with schematics are included. Weight is 52 lbs, and will pack at about 60 lbs. My zip code is 28461 if you would like to estimate shipping. I would be interested in a Drake SPR-4 trade, or a straight out sale. Pictures of this radio can be viewed by going to the addresses below:
http://www.bcinet.net/darla/sx42a.jpg

Source record: 105338
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a Hallicrafters SX-43 receiver for sale. This radio is a "fixer-upper". Here's a description of its condition:

The front panel has random spots of rust forming underneath the paint (typical for ham gear of this vintage). The paint is not real bad except for the rust spots forming. The spots are not huge, but they are noticeable. The front panel lettering is in remarkably good shape. All of the knobs are original and are in good shape. The VFO dials are fine, as is the S-meter, but the dial cord for the bandspread dial is broken. The cabinet has no dents, but the paint is worn and there is some light rust on it. It would be a fairly easy job to strip, clean, and refinish it. The chassis has a light coating of dust, grime, and corrosion, but the corrosion is not serious, and there is very little rust. There are no components missing or damaged, and all tubes are in place (although I can't vouch for their condition as I have not checked them). The underside of the chassis is remarkable clean and shows no damage. All of the old wax paper capacitors would naturally have to be replaced, as would the electrolytics (this is standard procedure when restoring an old receiver anyway). I have never powered up the set, so I have no idea if it works or not. All tubes are in place. The 6V6 audio output tube is good (it was missing when I got the receiver, and I put a known good one in that socket). The remainder of the tubes are untested. I will include photocopies of the Owner's Manual and the Sams Photofacts manual (good clean copies).

The price is $50 plus UPS ground shipping from ZIP code 75065. This is a heavy radio. Figure on 60 lbs.

I had this set sold at one time, and I got it all packed up and ready to ship, but the buyer never came through and he is not responding to my emails. I've given him over a month to come through and he hasn't, so the receiver is back on the market again!

Interested? Email me!

73,
Dean - K5DH

2216. Collins 51S1 reduced to $1300.00

Keith,

What you will need to do is trace the modulator circuit from the speech amp to the modulators with a scope. That way you will see exactly where the audio stops. I suspect that you may have lost a cap or a bias resistor somewhere along the way.

Ladies and Gentlemen --

This weekend will be the annual military-to-amateur crossband operational test. It starts at 1300Z (0900 EST) on Saturday. Full details in the May 98 QST, page 107.

As in the past six or seven years, I'll be operating the Air Force's "big station" AIR at Andrews AFB beginning at 1300Z until.. Listen up on 14408, I'll announce where I'm listening frequently, it will be in the general class portion of 20 meters, somewheres around 14295. If you've worked AIR in past crossband/armed forces day operations, you know that we're not limited to a receiver/transmitter on the east coast.

Ya'll show up now, hear ?

jd

Message-ID: <6jdfl4$vf1$1@nnrp1.dejanews.com>
Source record: 105404

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept and collector quality. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x: I underexposed the camera and will have to retake photos. Once someone sees the super condition. I hope it will move quickly. Purchased off the gentleman directly who owned it. He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $250 or b/o plus shipping costs.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only thing I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced. Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself.

HQ-170 & Matching speaker $400 or b/o plus shipping. I realize both prices are on the high side, but these unit's physical condition are really nice.

Thanks.

Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA.,
U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit cannot be told from new and is in amazing condition.
It even has the original box with it. One person advertised this
unit for $325 in similar super condition and I have seen them for
$65 as well in decent condition.

Wish to get $200 or b/o plus shipping due to the wonderful
condition of this unit.

Thanks.

2228. FS: Johnson Viking Challenger Transmitter, Morse Key & manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-14 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6jdg5g$m1$1@nnrp1.dejanews.com>
Source record: 105407

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

Owned by non-smoker, so the meters are pure white and not
yellowed as one usually would expect with old boatanchors.

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider all offers on the unit over $150 plus shipping.

Thanks.

Hey, Puck... I know the feeling.... I used to work the USCG/NMN crewe
all the time, but IF noone is doing CW, anymore, much of the fun and
camarraderie is gone. The crewe at NMN could run some mean CW,
second to none, for sure.... but they did it for a living, then.
I will miss the music of Sergio or Burly on the sending irons.....

In tribute to them.....

ZUT, and may they have fair winds and following seas...

Message-ID: <u0ktAQCg9GA.173@nih2naac.prod2.compuserve.com>
Source record: 105269

I can't think of anything that used a pair of 803s. The GO-9 Navy CW-only aircraft rig used a single 803. On the ground, the BC-325, predecessor to the BC-610, used a single 803 for 400 watts CW or 100 powerful watts of grid-modulated AM--pretty poor for a 900 pound transmitter! I see that someone else already mentioned the ground version of the GO-9 (which had a bolt-on modulator section for AM).

Other than those 3 radios, I can think of no others that used the mighty 803.

Anyone else?

73, Don

Source record: 105273

I need the Modification for the Standard C-468A 440 MHZ Handi-Talkie.
That would allow me to open up the Transmit Range from 400 to 474 MHz. I
know there
Is a mod for this radio, I just don't know where to find itï¿½.I've tried
QRZ and OAK but no help.
I own the C-528A and the C-628A Dual-Band Handi-Talkies and have found
the Keypad modifications
For both and have done them. They worked out fine. I'm sure there is a
mod to open up the C-468A.

Anyone who could either pass the Modification along to me, or could tell
me where to find it. I would be in debted to foreverï¿½ï¿½.

Thanks Very Much,

Carl Domanico N2MFW

Ladies and Gentlemen --

This weekend will be the annual military-to-amateur crossband operational test. It starts at 1300Z (0900 EST) on Saturday. Full details in the May 98 QST, page 107.

As in the past six or seven years, I'll be operating the Air Force's "big station" AIR at Andrews AFB beginning at 1300Z until.. Listen up on 14408, I'll announce where I'm listening frequently, it will be in the general class portion of 20 meters, somewheres around 14295. If you've worked AIR in past crossband/armed forces day operations, you know that we're not limited to a receiver/transmitter on the east coast.

Ya'll show up now, hear ? I want to hear some boatanchors this year !

2256. Re: Sideband Engineers SBE-36

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-15 00:00:00 UTC
From: msix@rt66.com
Message-ID: <6jg48lhcv1@news.rt66.com>
Source record: 105351

Interesting thread...
I'm running my Robyn Digital 500 on 7050-52 now nites around 7PM
MDT to check CW mods.

Got this one in 1993, all dead except readout. No idea if this is
typical of all or not. Got SSB working passably good and finally,
got CW good enough to put on air. Afraid if I keep messing with it,
I'll go blind or crazy...

Never heard any on the air. Suspect few remaining are dead or junkers.

The Robyn 500 appeared in 1972. The 500A maybe a year later with 11M
and AM mode added. Then in 1974 or so, the SBE-36 ads appeared.
The -36 is identical to the 500A with a new logo on the front panel.
Numerous cut and paste mods from version to version to try and
fix what was a bad design from the start.

All bipolars and JFETs, no chips. Two tube front end, two tube Tx
mixer/driver to two 6KD6s at 500W DC in.

500 review is in CQ 4/72, lukewarm at best. Don't know if QST ever
reviewed. Rule then - and maybe still - was no ads, no review.

Always been curious about connection between Robyn and SBE. Robyn
could have designed from scratch, but suspect SBE had a hand in
it from the outset. Why would Robyn, a non-player,
suddenly jump into the then-glutted ham hybrid market?
And then, when Robyn failed, why would SBE try to peddle
a known loser if they didn't have something at stake???

Very attractive rig but unless one is a dedicated RF tinkerer and
has loads of time, best put on shelf for conversation piece.

I seem to have misplaced the URL for a company that sells what look to be meticulous restorations of R-390's etc. The Web site has lots of nice pictures. They also sell non-restored 390's and other interesting BA stuff.

Can anybody help me find this site again.

Thanx,

Gray

I am looking for any information that anyone might have on the Mackay 3010B marine HF receiver, specificly how the power cord is wired (octal plug).

Thanks for reading and 73! DE N5MCJ (Jerry)

2262. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6jgqha$ls3@news.Hawaii.Edu>
Source record: 105357
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Awhile back someone mentioned a common problem with the interconnection between the 117XC and the transceiver causing hum in the transceiver. I did not see this thread and would like to know what the cause and cure is. It appears that perhaps the connectors or wiring could be at fault. I did not take the connectors appart yet but the wiring in the power supply looks to be a little corroded between the strands. Does anyone have the big picture on this problem and the best solution?

I have looked at and followed to the conclusion of the auction some two hundred items on eBay. Never have I been able to find or purchase an item that I felt was a "good" deal. I am sure that there are some good deals to be had but they are, in my opinion, difficult to find on eBay.

I think the following pretty much sums up my feelings and experience:

That auction is great for selling, but not for bidding and here's why: If someone else thinks you are getting a good deal, they can't stand it. So, they outbid you until no one gets a good deal - except the seller. It is really just that simple. And, guess what, the sellers aren't blind - they know what's going on. They hold the cards. Oh, they may make a few mistakes, but they learn from them. Yet, it seems there is no end to envy, ignorance and jealously on the part of the bidders!!

These comments represent my opinion formed from observations over the past 6 months. Your mileage may vary . . .

And, I agree with Peter: Items posted here should be for sale here.

And, I also disagree somewhat: It seems that the great majority of eBay defenders are SELLERS . . . I wonder why? Peter is one of the few buyers who have defended eBay here . . . But, remember this, he is also a seller!!

Regards,

Bill

all i can say is....the hell with EBAY and the whole auction idea!
if you want to sell a radio or parts or what ever, just put a price on the damn thing and be done with it! if you put a reasonable price on something it will sell! if thats not good enough maybe you need a better job and forget about trying to get rich off ham-radio
news-groups! oh, dont get me wrong, i have nothing against making a proffit. if selling radio gear is your thing, get a store, start paying your taxes and make all the proffits you can!!!!!!!!

Geeeez guys, dont shoot the messenger

I didnt make the decision to do away with CW. That was some "high powered" civilian in OSD who followed the lead that the Coast Guard started.

jim (kw3u@warwick.net) wrote:
: well;i work 'em every year an got lotsa nice qsl's,
: what i'm gonna try is answer/call them on cw and see what
: happens--wouldnt be too suprised if one or two of them
: just happen to have a key with them...72 jim

If anyone calls me with CW, I'll answer them with voice. The radios I'll be using are remoted to Andrews and kinda impossible to plug a key into. Just keep it at or under 20.

I visted the USS Lexington in Corpus today, but was disappointed that the radio room was not open to viewing.

The volunteer on the bridge said the local ham club was restoring it.

Q: Does anyone have a photo of the radio room available for email?

Otherwise, a great exhibit. Big, clean, and lots of ship and aircraft to view. Worth the trip.

73 Tom

Gee I used to pull this tube out of old TV's in my teens during the
1970's. A string of those made a good HF amplifier for CW.
Best part was they were FREE!!!

>Keep those amps or old rigs alive.

Oh yeah we got to have our tubes don't we?

Hi,
I have forsale in very good condition a Yaesu
FT-101E with matching
speaker - landliner phone patch and microphone.
Includes original
manual. Works perfectly with 150 watts out, all
bands! Slightly less
on 10 and 11. Front panel excellent, case has a
few minor scratches,
thin hairline crack on S meter. Otherwise,
perfect. $350 plus
shipping or best offer.
Thanks!

There seems to be a pervasive atmosphere through various posts with this group that would indicate that people who frequent EBAY are either paying too much or that the people who are auctioning off their equipment are "rip-off" artists! I believe that a different atmosphere actually exists.

First to the believers that people who sell on Ebay are ripping off people with the prices, let me put forth the FACT that the sellers don't set the prices. The equipment is sold, if it has enough interest, at what the buyers believe it should be bought for. Frankly this is the highest form of balanced commerce, where the price is set by the buyers. If they are paying too much, it is only because they want to and felt like the item was at the right price. If they didn't feel like that, they wouldn't buy.

Finally, from the buyers prospective, Ebay (and the Internet in itself) offer a remarkable opportunity to find things that you are looking for that you might spend a lifetime looking for at flea markets, auctions, antique shops, junk stores, garage or yard sales, etc. There should be no question that it you are looking for something, the Internet and Ebay are surely the way to find it. From my prospective, this "finding" capability is darn sure worth a premium so when I find an item on the Internet or via Ebay, I have no qualms about paying a premium for the item because it is going to save me an enormous amount of time and energy which translates to money saved by finding it in this manner - - all for a few key clicks on the keyboard!

So for those who are bashing Ebay and its sellers as "rip-off" artists, it is a big world out there and perhaps you should forget tuning into this big "rip-off" arena and do your buying the old fashioned way. Get out your knee pads and flash lights and hit the early flea markets . . . me, I'll just hit the keys and find what I'm looking for - - - better, faster and perhaps cheaper in the long run.

Just another prospective to perhaps offset the Ebay Nay-Sayers continuing commentary.

Source record: 105301

For those who have inquired, the linear is a model MA1000B. Produces about 650 watts output on 10-80 meters with 1K input. Draws about 60 amps on the collector nominally, has circuit breaker that kicks in at 75 amps. Works great as a mobile amp or base station with a big ole' power supply.

See pix at http://www.electrosys.com/metron.htm

I have a supply of Vulcan 110 Watt soldering irons. However, they are surplus from WW2 and designed to operate on 24Volts.

No problem if you have a 24V transformer or a variac.

They are new in the box with the expensive heat resistant cords.
3/8 Inch tip.

Will sell for $8 each plus postage to your house.

Thanks

Terry,

I have no beef with EBAY per se. My beef, and the beef of numerous folks is the For Sale postings that go on and on the AT THE TAIL end finally have a little line that says EBAY.

We have asked repeatedly - PLEASE put EBAY in the subject line so that those whom wish to NOT deal with EBAY to set a filter.

If folks want to go to EBAY to sell or buy - That's great. There are just some of us that watch and look for things that want to read a post and be able to deal DIRECT with the person selling or buying - NOT end up with a bidding war.

Alas, it seems that a significant percentage of those folks that "sell" on EBAY wish to mask it until you get to the end of their posting.

THIS IS WHAT THE HOWLS AND GRUMBLES HAVE MOSTLY
BEEN ABOUT.

>>
>>I recently acquired a Standard Horizon Explorer II marine VHF FM
>>xcvr that I am going to try to modify for 2m on the local repeater.

i came to the same conclusion as the respondent just previous.
the newest ones are not reusable except as --boat radios!
surface mount parts and chips with 10s of tiny pins coming out.
impossible.
the synthesized ones, as stated previous, due to irregular
channel spacing, don't lend themselves to simple PLL
tweaking games.
the old crstal ones are probably usable, with quite little
work. except the work is in ordering/ buying crystals,
the thought of which seems to be the major stumbling
block for me to ever get around to such a project. it's
a hassle. but if you wanted to do this and got the radio
for what it's worth, basically zero, you could do this
and have a 2 meter rig for the price of 2 xtals per
channel. i hate crystal operation, so that's too expensive.
the conclusion i came to, is just use them for what they
are. or just monitor the boat band. anyway this conclusion
pretty well enables me to skip them at the swaps, no
matter how cheap.

Source record: 105310

On the subject of E-bay...I have been on both sides of the transaction, buyer and seller. Both transactions satisfactorily concluded. Both merchandise and currency changed hands in a calm, quick and secure fashion.

For the most part, E-bay is a service, the quality of which is determined entirely by the individuals using it. Sure there are gougers out there who seek to drive up the price of their goods through competitive bidding. And there are bidders who haven't a clue what they are bidding on, or what its really worth. And those people set a bad example. But after going to auctions for the better part of 30 years now, and using them as both buyer and seller, I have found that, within reason, no one paid more for something than it was really worth, and no one made a killing unloading merchandise. There are exceptions but they are individuals with unique goals, and circumstances.

Most of the people going to an auction are looking for a bargain on quality merchandise. More of the sellers at an auction are lookng to move something that was not selling on its own. I know in my case, this was certainly true, though at the end of the auction, what I found was that I had gotten my reserve price plus about twice the cost of shipping, and the buyer got what he bid on at about half of what he had expected tp pay for it. Seems like two winners, to me. As a buyer, I got what I wanted for about what I wanted to spend, and the seller got rid of what he was trying to move. But it depends, as I said, on the parties involved. Sure there is the risk that you can be outbid, but hell, that's true at a hamfest, by an earlier buyer. So its not like anyones' losing anything, here...

I agree that items for sale here should be for sale here. But for those who insist on using this NG for advertising purposes, a keyword in the header would be a considerate thing to do.

I realize that expecting considerate behaviour in 1998 is asking a bit much, but hell, I go to auctions and enjoy them...what the hell...

My 1296 module (a VERY early unit) developed low output at higher frequencies (3-4 watt above 1280 MHz). Yaesu wanted $270 and implied in their (cryptic) diagnosis that the output module died. My current 1296 MHz amp only needs about 3-4 watts of drive anyway, so I've decided to leave bad enough alone.

It is at the Arlington Convention Center next door to The Ballpark In
Arlington. Off of I-30 halfway between Dallas and Ft. Worth. Lots of
marked exits for the ballpark and then follow the antennas.

My thoughts on eBay -- which I have used myself

1. Most sellers want to hold shipment until the check clears before shipping. While I understand this, it seems to me that the goods would be more suspect than the money. Often the goods are overrated or incomplete. E-mail the seller that a knob (unmentioned in the description) was missing from a radio and hold your breath for a reply. Send the guy 2 bucks less than the agreed price and all hell breaks loose. Go figure!! Why isn't it set up where the buyer holds sending payment until he has the opportunity to inspect the goods. Makes more sense to me. I guess it's a matter of trust.

2. Usegroups appear to be a domain of hobbyists. eBay appears to be a commercial venture set up to extract the greatest amount of money from the buyer. Everyone knows that you don't mix your hobby with your business or it ruins both. That is why sellers go to eBay there -- the most buyers. Just to be safe they set sometimes ridiculously extreme reserves. This is so it will only go to a genuine sucker. Sounds like a commercial venture.

As I read the opinions, the controversy centers around hobby Vs. business. Plain and simple. If you object to the eBay postings, killfile the poster, or if it's easier, killfile the ISP. Killfile the phrase "ebay" in the subject. My killfile is a mile long, including domains, ".edu", specific people, and subjects I have no interest in.

This is exactly why eBay, in even the most liberal sense, is not an auction. Outsiders (strawmen) are brought in all the time, and the auction goes on for a week. And your opinion of eBay's reaction to this practice is also 100% correct.

Once you understand the rules, and the fact that eBay is not an auction, it is a very useful tool. I bid on many, many items. I am the high bidder on a very few.

Also, if you are looking for, for example, a TEK 465M o-scope, there will be one coming up for sale all the time. Pass this one by, another one will come along.

Source record: 105230

HELP! HELP!

I have sent this message many times before but to no avail. I would like to get in touch with any Hams who may have a KLM 1200GU Transverter. I recently purchased on at a Ham Swap Meet and discoverded when I got it home that it would put out abut 3.5 watts but no RX. I do not have a 1296.1 source to feed into the RX port to trace it through the mixer and LO circuits to see what is going on.

It could be a bad crystal a mixer problem or a LO problem or a combination of some of them. Without a Schematic or Maintenance Manual I'm stuck.

I spoke to Mike Stall K6MYC who used to be with KLM back some years ago and He could not help. That really puzzled me cuz he was directly involved in those units.

Well if anyone out there in Cyberland or in Ham Land can assist me with this problem it will be most appreciated.

Thank you in advance for your assistance in this matter.

Sincerely

E/S D.S.Righello 05/16/98 DSR-10

I have experienced excessive 1296 Module failures with my new Yaesu FT-736R

If anyone out ther has had similar difficulties I would be interested in knowing how you resolved it with YAESU. It has been sent out of my Ham Shack 3 times since December with 2 Failures of the 1296 Module, 1 Failure of the 2 Meter System and after I owned it less than 2 weeks I sent it back to AES Las Vegas to have them repair the 440 sysem as it would not XMIT.

Im getting frustrated with this unit I bought it new and put all the options in it and now its up to about $ 2700.00. I can't emagine YAESU would allow customers to suffer so many failures without offering to do something like replace the whole rig. It appears to be a Lemon.

If you have had similar experiences I would like to know how you resolved them.

Sincerely

Don S. Righello W6PJJ

I am sorry to say that if YOU do not establish communications with the seller other than a quick e-mail response then YOU are the one that bears the responsibility for NOT knowing more about the person you are dealing with.

I ALWAYS speak with anyone I deal with when a deal is in the hundreds of dollars. As in all deals it is indeed "caveat emptor", or buyer beware. You CAN
get stuck on an auctioned item just as well as on a one on one.

Besides, the issue is not whether you get what you pay for or not. It is an issue as to whether these ads should be CONSTANTLY placed in the NGs in such a manner that does not allow those of us that DO NOT want to deal with an auction can filter it out.

If you and others are so inclined to use EBAY, please do so. By now EVERYONE knows how to get there. So go there and look. The NGs are NOT the sole point for sales ads, and should not be.

>And, I also disagree somewhat: It seems that the great majority of eBay
>defenders are SELLERS . . . I wonder why? Peter is one of the few buyers who
>have defended eBay here . . . But, remember this, he is also a seller!!

A quick followup and then I'll let this drop. Outside advertising of an auction in progress seems to be a little like manipulating stock prices by dropping insider tips. The only beneficiaries of such practices are those that already hold the stock. And the truth is, by its nature E-bay does favor the seller. But again the quality of the transaction is dependent on the integrity of the parties to the transaction; E-bay has little to do with that.

For the record, the reason I went to E-bay, is that traditional methods of sale on the item I presented, did not work. With the esoteric nature of the merchandise on E-bay, I concluded that a more informed, and esoteric buyer would likely be found. And I was right. What had remained unsold, -- not so much as a single inquiry,-- was sold on E-bay in seven days. I got my price, the buyer got a bargain. Buyer was so thrilled that he had gotten so much more than he had bargained for, that he writes to me even today, six months down the road. I call that win-win.

As a buyer, however, I do have to agree, that bargains are few and far between. Many of the radios I have seen have not been worth the effort to bid on them. And many of the Boatanchors I have been interested in, have either had outstanding reserve prices or had been bid up to absurd prices. $3k on W-J HF1000 is not too far outside the bounds of reality. $3k for an HRO 500 is. So I pass on those items that are not worth the price. Or set my ceiling bid to what I believe the fair price should be. And let it go if need be.

The point is, that I determine what is a bargain and purchase accordingly. Whether this be at a hamfest, flea market, antique shop, auction or E-bay, is not relevant. No one is ripped off if I do not spend more than an item is worth. This is the beauty of an auction, as well as commerce in general

Truthfully, I have been outbid hundreds of times at auction, simply because I refuse to succumb to the bidding frenzy driven by the competitive spirit of those who have more money than brains. And that is MY choice. Not the seller's, not the auctioneer's, and not E-bay's. Not everything for sale in life is a bargain, nor should it be. However, if you look carefully, and pay very close attention, there are treasures out there, for a steal, occasionall. All you have to do is keep an eye open for them. And they will be found everywhere, even E-bay.

But, again, I do agree that outside advertising after an item has been posted for sale at E-bay is questionable at best. Which is why I didn't engage in the practice, myself. And again, I think such postings on the NGs should be clearly labeled as such.

Thank you for your time.

I agree completely. It would only be common courtesy to put "ebay" in the message header so those folks that get a wedgie from seeing ebay items mentioned here could use their software to filter those messages. Perhaps that could be added to the charter for the newsgroup.

VINTAGE FIELD DAY!!

Last month Barry announced the date - the weekend of June 13/14. This month after receiving input from a number of people, I'm announcing the rules. There was considerable opposition to the idea that VFD should be a contest, so we've deleted that part of it. Instead, we'll print reports from as many stations as we can fit into the August issue. The reports should consist of station logs (with all the usual information), descriptions of equipment used/power source/antennas, etc and of course we would like photos. Reports must be submitted to arrive here no later than July 15. Jim Hanlon, W8KGI, will be producing an article on the event and extracting material from the reports sent in. The rules are pretty darn basic: The event starts at 7 pm local time on Saturday, June 13, and ends at 7 pm local time on Sunday, June14. Incidentally, the first FD held back on the weekend of June 10/11, 1933, used the same starting and finishing times. All stations participating in VFD must use vintage tube-type equipment, operate CW or AM and fullfill the following, taken from the original 1933 rules, "Only portable stations, actually in the field, away from home addresses are eligible to submit field day scores". QST will have a mention of our VFD in their May issue and I'm asking everyone with a website to help publicize the event. Let's hope this VFD is a big success. Barry Wiseman, N6CSW

Some months when this newsgroup was first formed I jumped on somebody for
offering items for sale here. As it turns out that was my mistake; I hadn't read
the charter for this group and as it turns out it explicitly states that it is
permissible to offer items for sale here. Personally, I would prefer that
selling/buying to go on in one of the chartered .swap groups and that this group
remain focused on other ba areas. However, the charter permits it so I ate some
crow. As long as "commerce" is a chartered activity here I care not whether
someone is selling direct or referring to an online auction such as ebay.

>And, I also disagree somewhat: It seems that the great majority of eBay
>defenders are SELLERS . . . I wonder why? Peter is one of the few buyers who
>have defended eBay here . . . But, remember this, he is also a seller!!

I defend ebay and I have yet to sell anything there.

Let me explain further why I like ebay.

For over a year I was looking to buy a used McKay-Dymek DA-100D. These would pop up for sale in a few of the newsgroups periodically. EVERY SINGLE TIME that I emailed a seller to buy it I was too late; it had already been sold. I only read usenet every day or two. I guess some people must spend all day reading usenet.

Do I curse usenet as somehow being "unfair" because I could never get to a seller in time? Not at all.

After the last case where I was too late out of the gate I went to ebay and a fellow had one for sale there. The GREAT thing (in my mind) about ebay is that it allows time for people who don't spend every waking moment in front of their computer a chance to get "in the game" so to speak. I ended up winning the bid for the antenna and paid about $15 more than the average price of the ones that had been offered for sale via usenet. Was I ripped off? I don't think so, I still saved $60 bucks over a new one.

>auction houses never would.

Wrong! Go to Sotheby's (or any other major auction house) sometime. They have a bank of phones where people submit bids from around the world during an auction. One doesn't have to be physically in the audience to bid. That has been a standard practice for quite some time.

>This would ruin the integrity of the process and it's unfair to the bidders
>who undertook the time and effort to attend by only selectively introducing
>additional competitors. IMO, outside advertising of selected items while an
>auction is underway undermines the integrity of the process. This practice
>benefits only one party, where auctions should be a level playing field.

I would argue that ebay offers a more level playing field than most "live" auctions. In general only the larger auction houses publish an auction catalog of the items which will be up for sale which would allow one the time to research a piece.

Given the extended time frame of ebay auctions a buyer has an opportunity to shop around, do some research, check market prices, etc. In a "live" auction one really needs to be fairly expert on the items and current market values. If I have a question about an item I can contact the seller for further info, that's not always possible in "live" auctions.

>It's Ebay that should prohibit outside advertising or posting of items
>elsewhere as for sale once the bidding begins.

Why should they? That doesn't benefit the seller or potential buyers either.

> But they won't.
>They *want* satisfied sellers and the highest possible prices- isn't that how
>they make their money?

Keep in mind that ebay also NEEDS satisfied buyers. It takes two to make a market!

Source record: 105256

I doubt it's the crystal, since surely the same crystal and mulitplier chain is common to both the transmit and receive sections.

You probably do have a signal generator, though it won't be labelled as such. A two meter rig may have some signal at that range (9 times 144 is 1296; which is why it's 1296 and not 1295) to at least give you an idea of what might not be working. 48MHz crystals and crystal oscillators are fairly common, and you could add a stage to pick off the 27th harmonic. It was common in the old days to see circuits like this in the magazines, precisely because people needed a signal generator to get their receiving converters going.

How do you know it doesn't receive? If you don't have a signal generator, you're relying on local activity (are you sure it exists?), and antenna that might be new and not quite right, or whatever. Unless you have another converter, you might first have to track down whether indeed the converter is at fault, before you try to fix the converter.

A transverter is not exactly all that complicated. Early 1296 copnverteres were nothing more than an oscillator/multiplier chain and a tuned circuit or two feeding a diode mixer. Depending on the age of your unit, it may not be much more, or it might include an preamp stage and the mixer might be fancier. By looking at the board, you should be able to see where the antenna lead goes (there must be a relay of some kind to switch the antenna between the receive input and the transverter output, though it might be a solid state version) and it would go through some tuned circuits to either a preamp or a mixer. What's that device; from the part number you should be able to gather some information. Either the output of that is a low frequency tuned circuit, in which case it's the mixer, or more microwave and then another stage which would then probably be a mixer. At microwave, a lot of it may look uhfamiliar, but then a schematic might not look like microwave tuned circuits either.

The point to all this is that if you're unable to find a schematic, there are ways of gathering information about a piece of equipment.

Don't deal with scumbags! I think the ebay rating system is part of what helps make ebay a great place to do business.

> Send the guy 2 bucks less
>than the agreed price and all hell breaks loose.

Why would you send the guy less than the agreed upon price?? Just hoping the guy might say "what the heck" and send it to you anyway. Is honor an alien concept to you???

> Go figure!!

Gee, if I go to a local retail store and give them $2 less than the amount rung up on the register they might have me arrested. Go figure!!

> Why isn't it
>set up where the buyer holds sending payment until he has the opportunity to
>inspect the goods.

Ebay is just a mechanism to bring buyers and sellers together. I have read that there are soon going to be places that do as you describe. However, you'll find that prices there will be higher because the fees to be involved in the actual brokering of the deal will be higher.

> Makes more sense to me. I guess it's a matter of trust.

Can they trust you to send the full amount you agreed to pay? You're right it's a matter of trust. Are you up to it?

Perhaps I have just been lucky so far but I have NEVER been cheated and I ALWAYS send the full amount that was agreed upon.

>2. Usegroups appear to be a domain of hobbyists. eBay appears to be a

The analogy does not hold, it's not even close to being the same thing.

> And the truth is, by its nature E-bay does favor the
>seller.

I disagree completely!

Ebay's nature favors the market which benefits both buyers and sellers. It's quite simple. You can't sell something unless someone is willing to buy. I can't buy unless someone is willing to sell. Neither transaction can take place if nobody shows up!

> But again the quality of the transaction is dependent on the integrity
>of the parties to the transaction; E-bay has little to do with that.

And that is true anywhere in life!

>the buyer got a bargain. Buyer was so thrilled that he had gotten so much more
>than he had bargained for, that he writes to me even today, six months down the
>road. I call that win-win.

Yet a few sentences ago you claimed that ebay favors the seller. Which is it? Paradoxical ain't it?

>As a buyer, however, I do have to agree, that bargains are few and far between.

Why do so many people seem to assume that an auction is always a place to find "bargains"? I guess a lot of people attend auctions just to see what kind of stuff they can get for a "dollar". I look at auctions as an opportunity to gain access to items I wouldn't otherwise find in my local market.

> Many of the radios I have seen have not been worth the effort to bid on them.
> And many of the Boatanchors I have been interested in, have either had
>outstanding reserve prices or had been bid up to absurd prices. $3k on W-J
>HF1000 is not too far outside the bounds of reality.

>... $3k for an HRO 500 is.

And you will find offers like that in the newsgroups on occasion too! It has more to do with a seller that is not familiar with the market than some other evil influence.

>So I pass on those items that are not worth the price. Or set my ceiling bid
>to what I believe the fair price should be. And let it go if need be.

And only you can decide what something is worth to YOU.

>The point is, that I determine what is a bargain and purchase accordingly.

>very close attention, there are treasures out there, for a steal, occasionall.
>All you have to do is keep an eye open for them. And they will be found
>everywhere, even E-bay.

Well said!

>But, again, I do agree that outside advertising after an item has been posted
>for sale at E-bay is questionable at best. Which is why I didn't engage in the
>practice, myself.

I still fail to see how what you are talking about is a "bad thing". Anything that expands the market is a benefit to sellers and potential buyers.

The only thing I can figure is what bothers people about that is they think that if nobody else shows up they can slide in, be the only bidder, and get a "bargain". Then if they don't get something for the price they think it should have been sold to THEM for they get a wedgie and sour grapes and blame it on "stupid people on ebay" or "unethical business practices".

> And again, I think such postings on the NGs should be
>clearly labeled as such.

On that we can agree!

Personally I would prefer to see NO For Sale or Want To Buy ads in r.r.a.b.
ehether they are direct sales in the group or a pointer to eby, et al. That sort
of activity would ordinarily take place in *.swap, *.forsale, *.marketplace
groups.

However, the people that put together the charter for this group explicitly
included commercial FS/WTB activity. It seems that the majority of traffic here
is FS/WTB (I haven't actually counted).

Cest la vie.

>
>I was waiting for someone to bring up Sotheby's or other high-roller auctions.
>Please note I specified *ordinary* auction.

Hmm, I didn't see *ordinary* specified anywhere. Not that it matters.

> Taking outside phone calls at a
>garden-variety auction is NOT standard practice.

It may not be standard practice but it is not unheard of.

> Even at the high-roller
>places, "outside" bids are solicited on all items, not a selected few.
>Furthermore, they take incoming calls; they don't originate calls to
>potentially interested outsiders once the bidding begins.

Not always true. Many callers are called by the agent at the auction house when the particular lot number they are interested in bidding upon is on the block so to speak. Further it is not unheard of, for the agent at the auction house to have authority to bid on the buyers behalf up to a specified dollar amount (gee, sort of like ebays proxy bidding yes?) and to call the buyer when the bidding might exceed that amount and they would then be on the line to decide how to continue.

A "traditional" auction does not afford the time frame that ebay does. If a "traditional" auction for an item went on for a week you can be sure that a "traditional" auction house would certainly allow bidders to enter the room

subsequent to the bid start.

After all, a "traditional" auction house makes their money the same way ebay does.

>>I would argue that ebay offers a more level playing field than most "live"

Did I not say as much above?

>How much time do *you* personally need to research the going prices for a
>boatanchor radio?

What does that matter?

Actually, I have yet to bid on any boatanchor stuff on ebay and probably never will (though a fellow currently does have a real clean looking HQ-100 up for sale which looks tempting). I buy other things there.

>In a live auction, it's often possible to determine if the seller has planted
>a shill in the audience to bid prices up on stuff he owns.

And just as often one can't determine that.

> You can't tell on
>ebay. And don't tell me it doesn't happen there.

It's more difficult on ebay certainly. But if you bid there frequently you get a feel for who's who.

>Of course you can directly contact the seller. In person.

Not always.

>You obviously can't do that on ebay.

Why not? It may not always be practical but it may turn out they live just down the road. A friend of mine is a collector of Schuco model cars. He was dealing with a fellow on ebay and when it came time to close the deal and have the item shipped the guy lived a few miles from him. He drove over to pick it up and save on deliver charges <grin>.

>And you can walk away with the item immediately.

And...

>> It takes two to make a
>>market!
>
>It's not a true market.

Well, I can only conclude that you aren't fresh on your economic theory.

> The entire concept is heavily skewed towards the seller.

A statement without validity.

No, just be courteous and put ebay in your message header so that the offending messages can be filtered out by those that are afflicted with a wedgie by seeing ebay posts.

How's the bias voltage on the 6146's? You may have a bias supply problem if
the grid meter reading is indeed correct.

gerrym@infi.net wrote:

> I agree that if you are looking to get a good deal on popular items you probably
> won't find it on ebay. However, for those obscure items that show up one can
> definitely find good deals.

I disagree with this. I have seen some really obscure stuff show up at prices I would have thought would have been enough to buy three or four of them. But, that wasn't the case because at least two bidders lost their sense of perspective. To me, "winning" an auction is not the point. The point is to buy what you want at the lowest possible cost. Whether you are bidding on common or obscure items, if there is one other bidder who "has to have it", the premise of "lowest possible cost" goes out the window. So, you pack up and go home. There is no sense banging your head against the wall when there is always someone who is willing to pay twice what something is worth in order to "win".

> That's certainly not unique to ebay!

Never said it was. Generally, all auctions share this characteristic. But, with eBay auctions being days long, this effect is magnified. And, as a result, good deals and bargains are even more difficult to find.

> Such is life.

Wrong! Such is life on eBay!!

> Some months when this newsgroup was first formed I jumped on somebody for

> crow. As long as "commerce" is a chartered activity here I care not whether
> someone is selling direct or referring to an online auction such as ebay.

Yes, the charter does allow for such but it does state that the ads must be related. And, even though it allows commercial ads, I do not believe that I should be able to post ads daily for any commercial concern even if it is BA related. To me, the newsgroups have always had a non-commercial flavor (rec.radio.swap, for example has this in its charter) and for people to post blatant ads for commercial entities like eBay is simply not in keeping with this concept. After all, it is rec.radio.AMATEUR. boatanchors!!

And, I do care whether such ads are posted here for two reasons:

1. As stated above
2. It is confusing and frustrating to see an ad marked "For Sale - the very thing you were looking for" only to find it is not actually for sale at all and is not even lited in the newsgroup. Instead, you have been tricked into reading an ad for eBay!! What if I started posting ads for AES whenever they had a Drake TR-4, etc for sale? What if AES did it. And, then every other commercial concern followed suit? I just don't think that was an intended activity when this group was created. And, I feel the same goes for rec.radio.amateur.equipment and rec.radio.swap.

> I defend ebay and I have yet to sell anything there.

OK - I said "majority".

> usenet every day or two. I guess some people must spend all day reading usenet.

> Do I curse usenet as somehow being "unfair" because I could never get to a seller in time? Not at all.

GOOD!!
The only folks that I have ever heard say the newsgroups were "unfair" were defending eBay when they said it! Thankfully, you didn't!! But, you should remember the old adage about the early bird . . .

And, a Dejanews search reveals no posts from you indicating that you were looking for a DA-100D - Why not? ALL of the SELLERS aren't on eBay for goodness sake!!

> After the last case where I was too late out of the gate I went to ebay and a
> fellow had one for sale there. The GREAT thing (in my mind) about ebay is that
> it allows time for people who don't spend every waking moment in front of their

> for the antenna and paid about $15 more than the average price of the ones that
> had been offered for sale via usenet. Was I ripped off? I don't think so, I
> still saved $60 bucks over a new one.

Hey, if you gotta have it - go get it!! But, from what I have seen, you did very well to get it with only a $15 penalty. Of course, if it had sold for $30, I wouldn't think so!!

I still say that, day in and day out, eBay should be renamed eSell for "Easy Sell" because it is truly a venue where the sellers benefit much more than the buyers. And, when I see all of these sellers extolling the virtues and "fairness" of eBay and saying that it represents the closest thing to an ideal market, I just have to laugh. And, I see that you didn't include the long list of bargains that you found there . . .

Regards,

Bill

Hi Gang,

I wonder if anyone has operating instructions for the above bridge and can date it (my guess is 1960)? It was made in Holland.

Mine appears to work fine, but some of functions are unclear, such as the calibration position and the use of unmarked controls. Plus the use of external standards.

Thanks

Simon

I inadvertently left a Kenwood bag in the parking lot south of the
Hara Arena. In it was a rain poncho, some old pictures, and an Icom
751A manual. (and various other items)
I would appreciate hearing from the person who found it and would
gladly pay for the shipping to get it back.
E-mail to kc9kx@softfarm.com or 815-495-9223
Thanks Dave.

2393. FS: Ohmite Z Chokes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-18 00:00:00 UTC
From: msix@rt66.com
Message-ID: <6jqdh3$716$1@news.rt66.com>
Source record: 105158

One bunch of old time Ohmite Z chokes.

1 each Z-28, 20-60MHz, 1.75 inches long, yellow, unused
6 each Z-0, 2M, 1.75 inches long, red, unused

1 each Z-?, 5uH center-tapped, 1.75 inches long, black, unused
Think this one is for 2M push-pull as in 829B or 4CX250Bs.

1 each Z-50, 6M, 1 inch long, red, unused
1 each Z-235, 1.25M, 7/8 inches long, yellow, unused
1 each Z-144, 2M, 7/8 inches long, green, used

I think the big ones were rated 1 Amp, little ones .5 Amp
but check old catalogs.

All 11 for $20 pickup, $25 pp us.
Please guys, don't get me in the onezee, twozee mail order biz.
It costs me an hour, a gallon of gas and 3-4 bux just to send
a needle to Hoboken...
I just want to get these to some VHF/UHF fan who can use them.

I honestly do not know why I am replying to this....but here it goes....

Our founding fathers actually expected the government to probably get out of control, and wanted the people to have the rights to gain it back, "The right to bear Arms". The right to bear arms is "necessary to the security of a free state". The problem being you may find this to be a "free state", but many of us are finding it increasingly restrictive.

As a matter of note, most world dictatorships and monarchies start by relieving the public of there weapons so they may seize and maintain power and control. Its in the history books, and in the news.

I do not own a weapon, have no immediate desire to purchase one, but find that most anti gun ownership lobbies to lack a logical basis, usually spouting gun related deaths without mentioning that if a gun was not available a pick axe might have been used to the same affect.

Regards

Christopher Cox

PS Sorry for the inconvenience as am replying to a post that Mr. Fisher has linked to many newsgroups.

Take your foot out of your mouth and look into the meaning of militia, not to mention ‘the right of the people’ portion of the ammendment. Who do you think these ammendments were written for but individuals?

2397. FS: HF Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-18 00:00:00 UTC
From: John Peregord <jrperego@alpha.delta.edu>
Message-ID: <6jqnbk$uoi@alpha.delta.edu>
Source record: 105162

Very old Gonset GSB-201 HF amplifier with 160, 80, 40, 20, and 15mtrs. Unit has been heavily modified by past owner (electrical engineer) and retro-fitted with (2) 572B's. Unit used to run (4) 811A's.

I have redone the cabinet and unit works nicely with 25-35 watts drive for 500-600 out. I use a small out board tuner for tuned input. I have had it up to about 750 watts. Wired only for 120volts. This was a project for me and want to sell it to someone who will use it more than myself.

Amp weighs over 80lbs so I prefer local pick-up only. I can give a demo too if you prefer or QSO on the air with my OMNI-6 driving it. I have original manual and schematic plus new schematic with modifications included. I can send a picture via e-mail of the refinished cabinet.

Again, local pick-up only...$325.

73,
John/KB8UMD

Date: 1998-05-19 00:00:00 UTC
From: crslex <crslex@iglou.com>
Message-ID: <3561CBBC.6E58@iglou.com>
Source record: 105065

Trade: Tempo One (greyface) with matching power supply speaker for

Realistic HTX-100 10 meter mobile radio w/ mount and mike.

Tempo One HF transceiver needs some repair. Finals appear to be bad.

Power supply is putting out all the proper voltages. Underside of the

radio chassis is super clean. Top side of chassis is a little dusty. No

parts are missing. VFO assembly is in good shape and works. The cabinets

to the radio and power supply/ speaker need repainted but are dent free.

I have photocopy manuals with schematic.

I want to trade this gear even for a Realistic 10 meter mobile w/mount

and mike. Must be in good condition and working.

E-mail me at crslex@iglou.com or KB4AEP@juno.com

Thanks.....Mark KB4AEP

Jim,

I have a RME 4350 if your interested. Only difference between it and
the A version is no builtin crystal calibrator and no verner dial(which
I've been told end up slipping alot).

If you want to see it check out the Wants/For sale section of my webpage
at http://www.qsl.net/n9oo

(A similar posting was made to rec.amateur.radio.equipment earlier today)

I am seeking help with establishing FMV on a few boat anchors. TIA for any help.

BACKGROUND
All pieces have been sitting in a damp basement, unpowered since late '60's. They are all complete except as noted and show no evidence of major mods or repairs. They do show the effects of their environment, i.e. some rust on metal.

Item 1 Collins 75A-1 Rcvr SN 9XX. Complete

Item 2 Collins 32V- Xmtr SN 4XX, Several tubes missing. Some damage to glass dial and meter covers.

Item 3 Hallicrafters SX-100 Rcvr Complete. Still has "Hallicrafters" tubes.

Item 4 Hallicrafters HT-32B Xmtr Complete. Dial marker has flaked off.

Any help with establishiing a ballpark value on these items is appreciated. Either in group or direct. Thanks

Pete

Message-ID: <1998051921540200.RAA18600@ladder01.news.aol.com>
Source record: 105075

i have a Mosley CM-1 receiver in good condition. i dont have an owners manual. the receiver seems to work but the signals received are very weak! i checked the tubes and they are all ok, they test like new! as i dont have a manual i can not go any farther with the trouble shooting. there are no modifications that i can tell,
there are no extra holes! the face is in very good condition and the meter does work! there is a very small dent on the right side of the cabnet but very minor!
the paint on the cabnet is good and the face-plate paint is also good! this would be a very nice addition to someone's collection of vintage radios. i understand these radios are quite rare! there was one for-sale some months ago and the fella was asking over $200.00 now i dont know if there worth that much and i dont know what it sold for but i guess they have some value as it was sold the next day! if any body is interested, i will sell or trade the thing! please make me a reasonable cash offer! as for trades, i would be interested in a working or repairable R-392, something thats not all beat-up! i am open to suggestions, let me know what you might have! thanks & 73.....

e-mail.....Ax9909@AOL.COM

I have no complaints about EBAY. But there is a big difference between "FOR SALE" and "FOR AUCTION". If it is for sale post FS if for auction post FA and if it interests me enough I will look. What I am tired of is looking at For Sale ads that end in an EBAY address.

Thank you..

Used to have a tr22, and I loved it !!!!
I used 8.000 fundamental rocks times 18 to get to operating frequency of 144 Mc up. These are available on Bry's Xtal page -BA Net; als o many other places.

Remeber the tr-22 is AM, and some parts of the country its ALL 2 m. FM + tones.
If you are in Coraopolis, the Pgh area still has some 2 m. AM, I believe. Check out the Steel City A R C in Carnegie (Oakdale, actually) for help, especially Wednesday Evenings get-to-gethers

Good luck with the TR22C. In 1972 I thought it was the greatest rig goin'....but that is a ways back, isn't it?

73,

Are they new?
How much you want for some? I have a line on some @ $2 each- is that around what you were hoping for? BTW, I don't think it's wise to advise people that they are good @ 2.2kv (or even half of that) as I believe they are rated for an extremely short life at rated voltage (they were basically a throw away part).

Ethan

Since when don't you acknowledge that "People" = "Individuals" ?
Just who do you think "the people" are? certainly NOT the established
government. When in the Declaration of Independence it states ... WE
THE PEOPLE ... who do you think that is? It is US, the citizens.

You should have better things to worry about. It is strange that
people are not more worried about Disney using child labor, or that
America rapes the world for material goods.
Why would you whine about something you can't change, and then
go out and buy a pair of Nike shoes, made by kids, at the expense
of american labor.
Put some kid to work, to miss an education. Cheat your neighbor
out of a job, and elect some crook to take bribes, as protection,
for big business.
Maybe if some of the shooters had decent jobs, you wouldn't have to
worry about guns, so much. How smart do you have to be to know that
desperate people, with no jobs to improve their lives, and no way out
of the ghetto, don't care if they pop somebody. You wouldn't care either.
In Washington DC, where guns are illegal, the murder rate reached a record,
a few years ago. Orange County, FLA, where it is legal to carry
a pistol, the crime rate is down. Explain that.
W. Marshall

I'm looking for an RME 4350A receiver, preferably with the sideband adapter and in good condition. This is a ham band only receiver made in the late 50's or early 60's.

Hi Guys;
I got for SALE:
Radio Handbook, 13th edition, 1951, Some stains on the Cream colored binder, but lettering still readable. This pertains only to the binder area, not the hardcovers. No tears, no pages falling out otherwise exc. condx for its age! $25 plus shipping!

SideBand Communications Handbook by Harry Hooton W6YTH
1962 ed. Exc. condx. Has large fold out Schematics of Collins 32S-1, 75S-1, imagine that! Price is $20 plus shipping!

Thanks es 73....Rich WA2RQY (1961)

2442. FS GE S-990 Control Heads

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-19 00:00:00 UTC
From: dsrighello@aol.com
Message-ID: <1998051908424300.EAA20265@ladder03.news.aol.com>
Source record: 105184

I have quite a bunch of Ge S-990 Scan downloading 128 channel control units.

These units do not have mounting brackets or cables

From time to time I can aquire the cables and brackets but for now just the control Units.

These units are all in working condition and were checked out by the Factory before they arrived out West here in CA.

I will ship anywhere in the Continental USA for $ 75.00 shipping and handling included.

These units are as-is operational no Warranty offered or Implied. However if you buy one and it fails to operate correctly I wlll replce it promptly.

For those of you who think $ 75.00 including shipping and handling is too much, I suggest you contact Tele-Path in Fremont Ca at 510-656-5600 and they will quote a checked out ant operational unit from $ 250-350 depending on quantity as quoted by Les the owner to me just a few days ago. He will be glad to sell you the same model for 4 to 5 times my price.

If you are a serious and I mean serious buyer. you had better get your E-Mail to me ASAP. I will probably unload these units at this price in less than 2 weeks. I can aquire large quantities if you are interested in quantity discounts. But mind you, these are a steal at this price. I'm just getting very tired of moving box after box of equipment in the Garage.

2443. FS GE Heavy Duty Mobile Microphones

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-19 00:00:00 UTC
From: dsrighello@aol.com
Message-ID: <1998051908535000.EAA24721@ladder01.news.aol.com>
Source record: 105185

I have a significant quantity of GE Heavy Duty Mobile Microphones whcih will work fine for Delta SX and Rangr Radios. These units were built by the Shure Bros company for special applications. They are terminated at the end of the 2 ft coiled cord with a DB-25 connector. The PTT bar is designed for two positions one for CAR to CAR the other for CAR to Dispatch. They work with the GE S-810 and S-815 Alphanumeric display control units.

They will work with most any mobile provided you connect the pins correctly and provide many years of abuse.

If you are a serious buyer of this type of Mic I can order the Manuals for them on a case by case basis.

I will ship these units anywhere in the Continental USA for $ 55.00. They are in excellent condition, packed in Factory cartons and if you get one that wont perform I will replace it.

I do not provide and Warranty Stated or Implied but will of course as indicated above replace a defective unit.

If you do not understand this Mic I suggest you contact me for details, I do not want to become the Technical Support Center assisting connecting these Mics to any old radio you may have. They were designe to work with primarly GE radios but if you know your Salt you can make them work with most TWO-WAY radio's.

Let me know if you are interested.

Regards
Don W6PJJ

average'Average' means being run-of-the-mill,
mediocre, insignificant, an also-ran, a non-entity.
'Average' is the top of the bottom, the best of the worst,
the bottom of the top, the worst of the best.Which of these is you?
Being 'average' is the lazy person's cop out,
it's lacking the guts to take a stand in life;it's living by default.
Being 'average' is to take up space for no purpose,
to take the trip through life but never to pay the fare.
Being 'average' is to pass one's life away with time,
rather than to pass one's time away with life.
To be 'average' is to be forgotten once you pass from this life.
The successful are remembered for their contributions,
the failures are remembered because they tried,
but the'average', the silent majority, is just forgotten."

Quit bitching about ebay & start acting like real men. I buy from ebay - a lot - and have great success with it. I would rather see 50 posts to this NG referring me to a decent BA on ebay than one more whining, girlish, hand-wringing over someone who "paid too much" for something. Who the hell made you (any of you) the arbiter of what something is worth? Whatever the item is, it's worth exactly what someone else chose to pay for it.

PS: 95% of the posts on this group DON't interest me - I just dump 'em. Those of you who don't like ebay and/or auctions can do likewise.

PPS: Don't bother replying to this - I don't give a rat's ass. You'll only further annoy the 500 others a bit more.

No, nor does Bank Robbery constitute a major number in violent crime
related deaths.

> No kids ever killed teachers and students with a pick ax.

Really...I find that surprising, world wide? How about Rwanda?...BUT if you
do your homework you will find world wide that violent crime related deaths
is not attributed to gun ownership...indeed just the opposite was found to
be true. A fellow at OSU finished his findings last your if you are
interested. It is gruesome.....

I have two DowKey coax relays with SO-239 connectors, auxiliary contacts, and 12VDC coils I would like to trade for simular relays with 110VAC coils, or sell for $35. ea. Also have a DowKey as above with 110VDC coil for $30. Postage paid.

Jon, K1VVC

2451. Hickok cardmatic (AN/USM 118) tube testers for sale, sort of

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-19 00:00:00 UTC
From: nabil@user1.teleport.com
Message-ID: <6jrtcp$gf9$1@user1.teleport.com>
Source record: 105193
Cross-posted to: rec.audio.tubes,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I've got somewhere between 2 and 10 cardmatic USM-118 testers I'd like to be rid of. I'm in the process of inventorying them now. You can watch the progress at the URL http://www.spiritone.com/~nabil/hickok/invent.txt, all of the units for sale will be listed under BEATERS/JUNKERS/PARTS. Note that this list may shrink as well as grow. Please don't ask for explanations of the notations, they are for my use. Please don't ask about anything else on the list, as I'm not in "the business", this stuff is for my own amusement, and I very rarely sell anything.

I'm posting this now to solicit names of people who might have an interest in acquiring these units (in one lot), as when I finish the inventory, I'll want to be wrap things up quickly.

These would be poor units to buy if you want to own a cardmatic. They are entirely devoid of accessories, although no parts have been removed, at least not by me. I guess that you could assemble one (or more) fully working units from them, in fact I'd bet many of them are working. It's not entirely unimaginable that someone could obtain a cal cell & deck, a bunch of small and medium sized card decks, and assemble several very usable testers. But to be clear, do not buy these if you want a cardmatic. Buy these if you fix cardmatics.

There is no guarantee, warranty, promise of fitness for a particular purpose, or anything. The descriptions on my inventory page are for my benefit only. The only thing I am asserting about these units is that they are (or were) usm-118's.

Packaging might be a problem, you should plan on minimal assistance from me.

I don't have a price yet, it could be anywhere from free to several kilobucks.

Personally, I'm looking for CA-5's, cards that I don't have (like the WE's), and (not tube related) Teletype model 43 ASR's and PDP-8 parts. Well, some other weird stuff too but that's what springs to mind. Inquire further if you think you might have a good swap. Kinda like to find another Hammarlund HQ-180AC and maybe one of those big Navy, FRR-something huge monsters.

Email if you are interested.

Thanks,

Aaron

Hello all -

I'd like to locate an SX-115 receiver that Hallicrafters made back in the early 60's. Preferrably in very good condition (not 'gold-plated, collector-quality-sell-your-house-to-pay-for-my-retirement condition), for a reasonable price. I don't expect to find one for free, but I plan to use this radio as I do all my others, not eat off it. ;)

If you have one of these ol' beauts that you'd like to see go to a good home where it will be used, taken care of, and appreciated, please let me know. I have some nice goodies to trade, I'll even part with cash if necessary - or do both.

Thank you and 73 de Todd, KA1KAQ 'The Voice of Vermont'

Typically, the R-390A would have been used with something like the AN/GRC-26 system, which included the T-368/URT transmitter. That is the only designed matched pair that I am aware of. It was used with other systems, but usually not as a matched set. If I had to pick a matching rig it would be the T-368, first, and the BC-610I second. There may be some other obscure combos that were occasionally found, but you would have to check the ARMY TM's or the Navy Great Lakes crossreference manuals.

Heathkit QF-1, Q Multiplier. $25 + shipping.

A chance to add to your BA with a real useful addition true to the period!

I bought it long ago and am not going to use it now. No manual. Inside appears in fine shape and all mechanical parts working fine. I have nothing to test it on. All original knobs as best I can remember from years ago when I had one working.

There are a few very small minor areas on the case, mostly visible only from back, where aluminum shows through case, otherwise quite nice.

Front panel has some scratching on it. Not very visible except under bright light. At far right, largest scratch at edge about 1-1/2" long. Along top edge about 1/4" from edge, about 1" long and just to left of Q Multiplier writing, a small area about 3/8" long with some scratching.

A few relatively small areas on painted part of lower front panel with silver showing through. Quite minor I think.

I'd call the panel a 7+ out of 10.

In general appearance is very good.

Ian, K6SDE
San Jose, CA area

I just can't get enough of reading all this high spirited whining about ebay! It's so much fun to listen to folks complaining that they can't find any steals on ebay and that they're mad because the sellers are free to do things to optimize their return. It's just this simple, the above guys are absolutely right. There are *no* good deals to be found at ebay. None whatever, nada. If you are looking for good deals you have to go to swap meets, flea markets, auctions, etc, you know what I mean. You have to find the old grannies who have neat stuff out in the barn. What you use ebay for is to find the really hard to find things that you will probably rarely or never run across at the usual places in your neck of the woods. When you find it on ebay you will compete for it with zillions of others who might want it too, so you will probably have to pay a lot for it. The "good deal" in that case is that you even located it at all. I haven't ever gotten any finantial "good deals" at ebay but I've gotten ahold of stuff for my collection that I'd looked for for a long time and almost thought I'd never get. Some people seem to think that they are owed "good deals" by the world and throw a fit when they think they are not getting one. If you want to screw somebody out of something neat you're gonna have to hit up the naive and the ignorant, and you're not going to find them on ebay, that's for sure.

~~~W4ABC Writes...

Read those words and choke Burt. Knowing that you come from an overprotective (overbearing) anti-gun state like Massachusetts, I have no doubts who does the thinking for you Burt. I was born there, and I'm not looking back.

My brother still lives there, and he tells me that there is a proviso that states that if an intruder enters your place of dwelling, that you must first attempt to flee. Talk about "BULLSHIT." Here in Florida, you are already eating the wrong end of Mr. Mossberg's M590A1. It is not there to kill, but to "STOP" the unlawfull individual's entry into my home. Sometimes they don't live to draw their own gun though Burt!

Since we are talking about the rights of the "Individual," "Groups," "People," let's talk about one well known individual in history, that disarmed his country so that all would be safe from the ravages of the "gun." His name was non other than "Adolf Hitler."

Burt if you are serious about being "taken seriously," then may I suggest a couple of books that you may wish to peruse.

"More Guns - Less Crime" by John R. Lott Jr. The University of Chicago Press

"The Second Amendment Primer" by Les Adams Palladium Press

Let me tell you the story about this caveman that beat his wife on the head with a gun...

Chuck,

MY FACE IS RED !!!! I LIED TO YOU !!!!

The Hippies used to say, "Never Trust Anyone Over 30"; and I'm more than twice that !

I told you that was an AM rig. NO, its FM.
Lying in bed I jumped up fully awake and reailzed the truth!

However the problem of tones remains.
From your QTH you can easily reach many repeaters, such as Steel City over on McMichael road, BUT they, like most everyone, have installed tone acess which the TR22C won't provide.

Another good place to get Xtals without paying an arm and a leg is the Butler Hamfest, coming up on June 7 from 8:00
am to 4:00 pm. EVERYONE goes. C U There?

Sorry about the stupid mistake! Last piece of advice. DON'T GET OLD...you'll embarass yourself....

You will like the TR22C !

Plum

PS: Consider a pair of 146.52 Xtals and use the rig primarily simplex

Thanks. You have made me see the error of my ways. I'm fully repentant !

You see I, (and others of the Great Right Wing Conspiracy) were planning
a big shoot-out.

We were going on the Jerry Springer show and shoot everyone 'cept the
host.
Springer we would hold hostage.

Some of us wanted to do the Ophra show
instead, and another nut suggested doing
it on LARRY KING DEAD... I killed that idea.
